

Small area data on field crops, 2017

Released at 8:30 a.m. Eastern time in *The Daily*, Tuesday, February 13, 2018

Small area data on field crops are now available for the 2017 crop year.

Note to readers

Small area data on field crops show seeded and harvested area, yield and production estimates for most principal field crops and some special crops in Canada, at the census agricultural region level (except for Quebec, where small areas are defined by provincial administrative boundaries, and Saskatchewan, where small areas coincide with census divisions boundaries as of 2017). The provinces covered are British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Quebec.

The data are available in both imperial and metric units of measure for periods ranging from 1976 to 2017. Data are derived from the results of the November Farm Survey of the preceding year, of which the production estimates were released at the provincial level in early December.

Available in CANSIM: table [001-0071](#).

Definitions, data sources and methods: survey number [3401](#).
