

Canadian Community Health Survey: Public use microdata file, 2015/2016

Released at 8:30 a.m. Eastern time in *The Daily*, Monday, January 7, 2019

The 2015/2016 *Canadian Community Health Survey: Public Use Microdata File* is now available. In 2015 and 2016, information was collected in all provinces and territories from approximately 110,000 respondents aged 12 or older and residing in a household.

The file provides data for 98 health regions or combined health regions across Canada on a wide range of topics. The data include information on physical activity, height and weight, smoking, exposure to second hand smoke, alcohol consumption, general health, chronic health conditions, mental health and use of health care services. It also provides information on the socio-demographic, income and labour force characteristics of the population.

Note to readers

The Canadian Community Health Survey collects a wide range of self-reported information about the health status of Canadians, factors determining their health and their use of health care services.

The combined data from 2015/2016 were released in [The Daily](#) on November 7, 2017.

Definitions, data sources and methods: survey number [3226](#).
