

Value added in exports, 2016

Released at 8:30 a.m. Eastern time in *The Daily*, Friday, December 13, 2019

Data on the value added in exports for 2016 are now available. The tables for 2014 and 2015 have also been revised.

Note to readers

The value added in exports database provides data on the exports and imports of industries, as well as on the direct and indirect impact of exports on gross domestic product and jobs by industry. Industry impacts can be viewed from the perspective of their impact on other industries or from the perspective of an industry's dependence on other industries. Data cover the period from 2007 to 2016 and rely on the supply-and-use tables, which provide the basis for the calculations.

Beginning with reference year 2013, a provincial and territorial dimension has been added to the measures. Imports embodied in exports have also been expanded to show their US and non-US origins.

Available tables: table [12-10-0100-01](#).

Definitions, data sources and methods: survey number [1401](#).

For more information on the methodology, see the document "[Value-added exports: measurement framework](#)."
