

Crop Condition Assessment Program, May 25 to July 19, 2020

Released at 8:30 a.m. Eastern time in *The Daily*, Friday, July 31, 2020

Weekly data on the Normalized Difference Vegetation Index (NDVI) for the period from May 25 to July 19, 2020, are now available.

The database holds the mean value of the one-kilometre resolution satellite picture elements within each of the census agriculture regions, census divisions and census consolidated subdivisions of Canada with pasture or cropland activity. The Crop Condition Assessment Program (CCAP) database is updated weekly from mid-April to mid-October. Since 2000, NDVI data have been disseminated through the CCAP application, which is available on the Statistics Canada website.

Note to readers

Agriculture and Agri-Food Canada has partnered with Statistics Canada to provide the Crop Condition Assessment Program application. The Canada Centre for Mapping and Earth Observation, part of Natural Resources Canada, has also contributed by providing software for processing the input satellite data.

Available tables: table [32-10-0453-01](#).

Definitions, data sources and methods: survey number [5177](#).

The publication *Crop Condition Assessment Program, 2020* ([22-205-X](#)) is available.

Weekly satellite images from the start of the 2020 growing season have been processed and are now available on the [Crop Condition Assessment Program](#) website.
