

Real-time local business conditions, January 3 to 9, 2022

Released at 8:30 a.m. Eastern time in *The Daily*, Friday, January 14, 2022

Weekly data on real-time local business conditions are now available for January 3 to 9, 2022.

Note to readers

The Real-time Local Business Conditions Index is released as an experimental statistic to measure business activity in real time during the pandemic and beyond. The index tracks business conditions in Calgary, Edmonton, Montréal, Ottawa–Gatineau, Toronto, Vancouver, and Winnipeg.

The Real-time Local Business Conditions Index is still evolving, and additional data sources are being tapped to better understand current business conditions in select cities. A rising index reflects improving business conditions in an urban centre, while a declining index signals deteriorating business conditions.

The Index has three components that combine alternative data sources with Statistics Canada's data holdings: the first is a static component to measure the economic size of a business district at the local level; the second tracks operating conditions of the businesses in a given area; and the third measures the level of business activity in the area using road traffic data.

Next release

Data on real-time local business conditions for January 10 to 16, 2022 will be released on January 21, 2022.

Available tables: table [33-10-0398-01](#).
