

Provincial symmetric input-output tables, 2020

Released at 8:30 a.m. Eastern time in *The Daily*, Thursday, November 16, 2023

The provincial symmetric input-output tables for 2020 are now available.

The symmetric industry by industry input-output tables show inter-industry transactions, that is, all purchases of an industry from all other industries, as well as expenditures on imports and the components of value added, such as wages and gross operating surplus. Similarly, the symmetric final demand tables show all purchases by each final demand category from all industries, as well as expenditures on imports. The symmetric input-output tables are analytically derived from the industry by product supply and use tables.
