1. The first line is the series itself expressed in millions of dollars, seasonally adjusted at annual rates. The second line is the period to period percentage change.

2. Sum of accrued net income of farm operators from farm production and net income of non-farm unincorporated business, including rent.

3. Total income minus current transfers to government.

1. The first line is the series itself expressed in millions of dollars, seasonally adjusted at annual rates. The second line is the period to period percentage change.

2. Includes interest and dividends received from non-residents.

3. Interest on the public debt is routed to other sectors of the economy through the corporate sector due to incomplete information on transactions of government debt instruments.

1. The first line is the series itself expressed in millions of dollars, seasonally adjusted at annual rates. The second line is the period to period percentage change.

2. In GDP, government current expenditure is recorded on a net basis, that is, after deduction of sales of goods and services. In the government sector accounts, sales of goods and services to other sectors are shown separately as part of revenue, and current expenditure is recorded on a gross basis, which leaves saving unchanged.

Table E.5 Sector accounts - Non-residents[1]

1. The first line is the series itself expressed in millions of dollars, seasonally adjusted at annual rates. The second line is the period to period percentage change.

2. This account presents the saving as well as the net lending or borrowing position of non-residents with respect to their transactions with Canadian residents. The sign of these aggregates is, therefore, the reverse of what appears in the Canadian Balance of International Payments.

1. Source: U.S. data are from the Bureau of Labor Statistics, Productivity and costs, published in NEWS.

2. Calculations of growth rates are based on index numbers rounded to three decimal places.

3. The exchange rate corresponds to the Canadian dollar expressed in U.S. dollars.

4. The change at annualized rates corresponds to the annual growth rate that would have been observed if the growth over the quarter had been the same for the whole year.

1. Source: U.S. data are from the Bureau of Labor Statistics, Productivity and costs, published in NEWS.

2. Calculations of growth rates are based on index numbers rounded to three decimal places.

3. This is the ratio of labour compensation to GDP at market prices in current dollars.

4. The change at annualized rates corresponds to the annual growth rate that would have been observed if the growth over the quarter had been the same for the whole year.
