How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website, www.statcan.gc.ca.

You can also contact us by

email at infostats@canada.ca

telephone, from Monday to Friday, 8:30 a.m. to 4:30 p.m., at the following toll-free numbers:

- Statistical Information Service 1-800-263-1136
- National telecommunications device for the hearing impaired 1-800-363-7629
- Fax line 1-877-287-4369

Depository Services Program

- Inquiries line 1-800-635-7943
- Fax line 1-800-565-7757

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under “Contact us” > “Standards of service to the public.”

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Standard table symbols

The following symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^P preliminary
- ^r revised
- X suppressed to meet the confidentiality requirements of the *Statistics Act*
- ^E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Aboriginal Peoples: Fact Sheet for Canada

Aboriginal people in Canada number 1.4 million

- Representing 4% of the total Canadian population, 1,409,100¹ people in Canada had an Aboriginal identity in 2011.
- About one in five (22%) Aboriginal people in Canada resided in Ontario with an additional 58% living in one of the four western provinces. In addition, 10% of the Aboriginal population lived in Quebec, another 7% lived in the Atlantic provinces and 4% resided in Yukon, Northwest Territories and Nunavut.
- Canada was home to 859,970 First Nations people, 451,795 Métis, and 59,445 Inuit, with the rest reporting other² Aboriginal identities (26,485) or more than one Aboriginal identity (11,415). From 2006 to 2011, the First Nations population in Canada increased by 23%, while the Métis population rose by 16%, and the Inuit population by 18%.³
- Of those who identified as First Nations people in 2011, three-quarters (75% or 645,940) reported being a Treaty Indian or a Registered Indian as defined by the *Indian Act* of Canada. Over one-third (38% or 328,445) of all First Nations people (50% of First Nations people who were Treaty or Registered Indians, or 322,650 individuals) lived on a reserve.

About the data sources

The 2011 National Household Survey (NHS) and the 2012 Aboriginal Peoples Survey (APS) are the main data sources for this fact sheet. The 2011 NHS collected social and economic data about the Canadian population. The 2012 APS was a national survey of First Nations people **living off reserve**, Métis, and Inuit aged 6 and older. The data are for the **Aboriginal identity population**, which refers to people who reported identifying with at least one Aboriginal group, that is, First Nations, Métis or Inuit, and/or those who reported being a Treaty Indian or a Registered Indian as defined by the *Indian Act* of Canada, and/or those who reported they were members of an Indian band or First Nation. It was possible to report both single and multiple responses to the Aboriginal identity questions on the NHS and the APS. The NHS data in this fact sheet are based on single responses only. The APS data represent a combination of the single and multiple Aboriginal identity populations. Nearly all off-reserve First Nations, Métis, and Inuit respondents reported a single identity. In some communities of Northern Ontario, the NHS was not completed during the regular collection period due to forest fires. The NHS Special Collection for 13 Indian reserves and Indian settlements in Northern Ontario (October 2011) was a voluntary survey in which all households in these 13 areas received the questionnaire used to enumerate canvasser areas in the 2011 NHS. These data are included in the NHS estimates for Canada and Ontario. As a result, data in this fact sheet will be different from data in other tables on the Statistics Canada website.

1. Some Indian reserves and settlements did not participate in the 2011 National Household Survey (NHS) as enumeration was either not permitted or it was interrupted before completion.

2. This includes people who reported having Registered Indian status and/or being members of an Indian band or First Nation without reporting an Aboriginal identity.

3. A number of factors should be taken into account when comparing data on Aboriginal people over time. Please refer to the [Aboriginal Peoples Reference Guide, National Household Survey, 2011](#), Catalogue no. 99-011-X2011006 and the [Aboriginal Peoples Technical Report](#), Catalogue no. 99-011-X. Incompletely enumerated reserves (including the 13 reserves in Northern Ontario) are not included in the 2006 and 2011 data used to determine the change in the Aboriginal population.

Aboriginal population younger than non-Aboriginal

- Close to half (46%) of Aboriginal people in Canada were under the age of 25, compared with 30% of the non-Aboriginal population. More than half of Inuit (54%) were in this age group, as were 49% of First Nations people (52% of those living on a reserve and 47% of the off-reserve population) and 41% of Métis.
- In 2011, the median age of First Nations people was 25.8; the off-reserve population was older (27.1) than those living on a reserve (23.8). Métis had a median age of 31.4; that of Inuit was 22.8. All three groups were younger than the non-Aboriginal population, whose median age was 40.6.

Half of Aboriginal children live with both parents

- In Canada, 43% of First Nations children aged 14 and younger lived in a family with both their parents in 2011, as did 57% of Métis children and 58% of Inuit children. The corresponding percentage for non-Aboriginal children was 74%. Over a third (37%) of First Nations children, 30% of Métis children and 26% of Inuit children lived in a lone-parent family, rates that were higher than that for their non-Aboriginal peers (17%).
- In 2011, 4% of Aboriginal children aged 14 and younger were in foster care; at 6%, the percentage was highest for First Nations children living off reserve. Moreover, of all children in foster care in Canada in 2011, just under half (48%) were Aboriginal children, the majority of whom (82%) were First Nations children.

Table 1

Percentage distribution of children aged 14 and under by living arrangement, by selected Aboriginal identity group and area of residence, Canada, 2011

	Total Aboriginal identity population	First Nations single identity			Métis single identity	Inuit single identity	Non- Aboriginal identity population
		Total	On reserve	Off reserve			
		percent					
Children of both parents ¹	47.5	42.6	42.6	42.6	56.9	58.2	74.1
Stepchildren	8.5	8.6	8.3	8.9	8.6	6.4	5.8
Children of lone parent	34.3	37.0	35.9	37.8	29.8	25.8	17.4
Grandchildren in skip-generation family	2.7	3.3	4.5	2.5	1.4	2.3	0.4
Foster children	3.6	4.5	2.5	6.0	1.7	2.8	0.3
Children living with other relatives ²	2.2	2.5	4.1	1.3	1.2	3.4	1.9

1. Includes children in a two-parent family where there may also be stepsiblings or half-siblings present. Also includes children in a two-parent family for whom it cannot be determined if they are stepchildren.

2. Non-relatives may be present. Excludes foster children.

On-reserve First Nations people and Inuit most likely to live in crowded homes and homes requiring major repairs

- In 2011, 28% of on-reserve First Nations people and 30% of Inuit in Canada lived in crowded homes, that is, with more than one person per room. Among Métis, the percentage was 3%, and among off-reserve First Nations people, 7%. The comparable figure for the non-Aboriginal population was 4%.
- One in four First Nations people (26%), 13% of Métis and 30% of Inuit lived in homes in need of major repairs; the rate for First Nations people living on a reserve was 43% while that for those living off-reserve was 15%.

Table 2
Percentages living in crowded homes and homes in need of major repairs, by selected Aboriginal identity group and area of residence, Canada, 2011

	Total Aboriginal identity population	First Nations single identity			Métis single identity	Inuit single identity	Non- Aboriginal identity population
		Total	On reserve	Off reserve			
		percent					
Crowding ¹	11.4	14.8	27.7	6.8	3.1	29.9	4.0
Home in need of major ² repairs	21.7	25.9	42.9	15.4	13.2	29.8	6.8

1. More than one person per room.

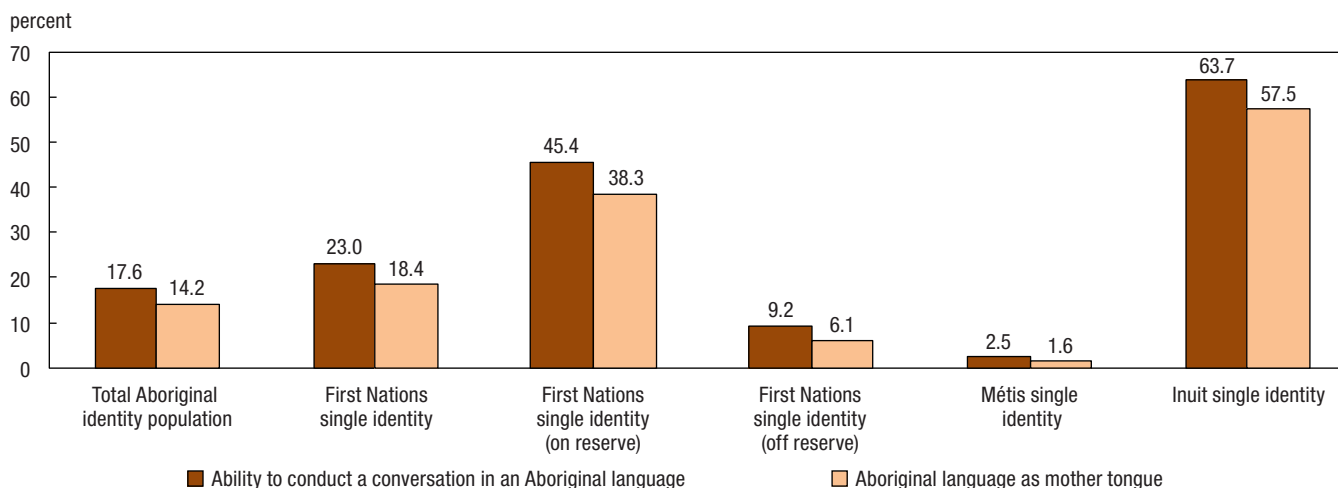

2. For example, dwellings with defective plumbing or electrical wiring and dwellings needing structural repairs to walls, floors or ceilings.

Source: Statistics Canada, National Household Survey, 2011.

Ability to speak an Aboriginal language highest among on-reserve First Nations people and Inuit

- In Canada, 45% of First Nations people living on a reserve and 64% of Inuit reported the ability to conduct a conversation in an Aboriginal language, a rate higher than among off-reserve First Nations people (9%) and Métis (2%). The Aboriginal languages most commonly spoken by First Nations people were Cree languages, Ojibway, and Oji-Cree. Métis spoke mostly Cree languages, Dene, and Michif. Inuktitut, Inuinnaqtun and Inuvialuktun were the Aboriginal languages most commonly spoken by Inuit.
- The number who reported being able to converse in an Aboriginal language exceeded the number who reported an Aboriginal mother tongue, which suggests acquisition of an Aboriginal language as a second language.
- Based on results of the Aboriginal Peoples Survey,⁴ 60% of off-reserve First Nations people, 37% of Métis and 84% of Inuit aged 6 and older reported that speaking and understanding an Aboriginal language was important to them.

Chart 1
Ability to converse in an Aboriginal language and Aboriginal language as mother tongue, by selected Aboriginal identity group and area of residence, Canada, 2011

Source: Statistics Canada, National Household Survey, 2011.

4. The target population of the 2012 Aboriginal Peoples Survey (APS) excluded people living on Indian reserves and in Indian settlements in the provinces and in certain First Nations communities in the territories.

About half have postsecondary qualifications

- In 2011, 48% of Aboriginal people aged 25 to 64 in Canada had a certificate, diploma or degree from a trade school, college or university: 45% of First Nations people, 55% of Métis and 36% of Inuit. The comparable percentage for their non-Aboriginal counterparts was 65%.
- Among those with postsecondary credentials, First Nations people, Métis and Inuit were more likely than non-Aboriginal graduates to have completed programs below the bachelor's level (trades or college programs).
- There was also a difference in the proportion of Aboriginal and non-Aboriginal people with "no certificate, diploma or degree". In 2011, 33% of First Nations people aged 25 to 64, 21% of Métis and 49% of Inuit did not have a certificate, diploma or degree. The corresponding percentage for the non-Aboriginal population was 12%.

Table 3
Highest level of educational attainment of population aged 25 to 64, by selected Aboriginal identity group and area of residence, Canada, 2011

	Total Aboriginal identity population	First Nations single identity			Métis single identity	Inuit single identity	Non- Aboriginal identity population
		Total	On reserve	Off reserve			
percent							
No certificate, diploma or degree	29.1	33.3	47.2	25.6	20.8	48.5	12.1
High school diploma or equivalent	22.7	22.1	18.0	24.4	24.4	15.9	23.2
Postsecondary certificate, diploma or degree	48.2	44.6	34.8	50.0	54.8	35.6	64.7
Apprenticeship or trades certificate or diploma	14.3	13.1	12.3	13.6	16.3	13.2	12.0
College, CEGEP or other non-university certificate or diploma	20.6	19.3	14.6	21.9	23.2	15.6	21.3
University certificate or diploma below bachelor level ¹	3.5	3.6	3.3	3.8	3.5	1.7	4.9
University certificate, diploma or degree at bachelor level or above	9.8	8.6	4.6	10.8	11.7	5.1	26.5

1. Comparisons with other data sources suggest that the category "University certificate or diploma below bachelor level" was over-reported in the National Household Survey. The results for this category should be interpreted with caution. For more information on concepts and data quality, refer to the reference guides on the [2011 National Household Survey \(NHS\)](#) website and [Education Reference Guide](#).

Source: Statistics Canada, National Household Survey, 2011.

Employment rates and median total income increase with education

- In 2011, the employment rates of First Nations people, Métis and Inuit aged 25 to 64 in Canada who did not have a certificate, diploma or degree were 37.3%, 52.6% and 44.9% respectively. Employment rates were higher for those with further education. For example, among those with postsecondary credentials, the employment rate of First Nations people was 71.0%, while that of Métis was 78.4% and that of Inuit, 73.4%.

Table 4
Employment rate of population aged 25 to 64, by highest level of educational attainment, selected Aboriginal identity group and area of residence, Canada, 2011

	Total Aboriginal identity population	First Nations single identity			Métis single identity	Inuit single identity	Non- Aboriginal identity population
		Total	On reserve	Off reserve			
employment rate (percent)							
Total	62.5	57.1	47.0	62.7	71.2	58.6	75.8
No certificate, diploma or degree	41.9	37.3	33.0	41.7	52.6	44.9	57.1
High school diploma or equivalent	64.0	58.9	49.3	62.9	71.1	67.1	71.7
Postsecondary certificate, diploma or degree	74.2	71.0	64.7	73.4	78.4	73.4	80.7

Source: Statistics Canada, National Household Survey, 2011.

- Median total income⁵ was also higher for those with higher education levels. Among First Nations people aged 25 to 64, median total income (rounded to the nearest \$1,000) ranged from \$14,000 for those with no certificate, diploma or degree to \$32,000 for those with postsecondary credentials. The range for Métis was from \$20,000 to \$40,000, and for Inuit, from \$20,000 to \$43,000.

Half rate their health as excellent or very good

- Based on results of the Aboriginal Peoples Survey, half (52%) the Aboriginal population aged 12 and older in Canada rated their health as excellent or very good in 2012: 51% of First Nations people living off reserve, 55% of Métis, and 48% of Inuit.
- Métis aged 12 to 24 were the only group who reported an overall health rating on par with that of their non-Aboriginal peers.⁶

Chart 2

Excellent or very good self-rated overall health of population aged 12 and over, by selected Aboriginal identity group and age group, Canada, 2012

Sources: Statistics Canada, Aboriginal Peoples Survey, 2012; and Canadian Community Health Survey, 2012.

- The majority of off-reserve First Nations people (60%), Métis (64%), and Inuit (53%) aged 18 and older reported excellent or very good mental health.⁷
- Six in ten off-reserve First Nations people (61%) and Métis (60%) and 42% of Inuit aged 12 and older reported that they had been diagnosed with at least one chronic condition. The corresponding percentage for the non-Aboriginal population was 53%.
- Among off-reserve First Nations people, Métis and Inuit, commonly reported conditions included arthritis excluding fibromyalgia (18%, 18%, and 11%, respectively), high blood pressure (15%, 17% and 11%), and asthma (15%, 15% and 8%). In addition, 14% of off-reserve First Nations people, 12% of Métis and 7% of Inuit reported being diagnosed with a mood disorder, and 14% of off-reserve First Nations people, 13% of Métis and 5% of Inuit reported an anxiety disorder.

5. Total income includes income from all sources, including employment income, income from government programs, pension income, investment income and any other money income. The calculation includes population with income and without income (with an income of zero).

6. Health data for the non-Aboriginal population were drawn from the 2012 Canadian Community Health Survey.

7. Questions on self-rated mental health were only asked of respondents who were providing answers to the survey directly, on their own behalf (i.e., data are not available when questionnaires were completed by proxy interview).

Table 5
Excellent or very good self-rated mental health of population aged 18 and over, by selected Aboriginal identity group and age group, Canada, 2012

	Total Aboriginal identity population (excluding reserves)	Off-reserve First Nations people	Métis	Inuit	Non-Aboriginal identity population
	percent				
Total	61.4	59.7	64.2	53.3	71.6
18 to 24	62.0	60.8	65.9	49.8	73.8
25 to 44	61.0	59.7	63.2	54.3	73.1
45 and over	61.6	59.3	64.5	54.2	70.2

Sources: Statistics Canada, Aboriginal Peoples Survey, 2012; and Canadian Community Health Survey, 2012.

One in two Inuit smoke daily

- In 2012, 27% of off-reserve First Nations people aged 12 and older reported that they smoked daily, as did 26% of Métis and 49% of Inuit. The comparable percentage for the non-Aboriginal population was 15%.
- First Nations people, Métis and Inuit in all age groups in Table 6 had higher rates of daily smoking than did their non-Aboriginal counterparts.

Chart 3
Selected health behaviours of population aged 12 and over, by selected Aboriginal identity group, Canada, 2012

1. Heavy drinking refers to the consumption of five or more drinks on one occasion at least once a month in the 12 months preceding the survey.

Sources: Statistics Canada, Aboriginal Peoples Survey, 2012; and Canadian Community Health Survey, 2012.

- For those 12 and older, the rate of heavy drinking (five or more drinks on one occasion at least once a month in the 12 months preceding the survey) was 35% for off-reserve First Nations people, 30% for Métis, and 39% for Inuit, compared with 23% for non-Aboriginal people. An estimated 43% of off-reserve First Nations people, 38% of Métis, 40% of Inuit and 36% of non-Aboriginal people aged 12 to 24 reported heavy drinking.
- At the same time, 31% of off-reserve First Nations people and 38% of Inuit were non-drinkers (consumed no alcohol in the 12 months preceding the survey), compared with 24% of the non-Aboriginal population. The percentage for Métis was 25%. At ages 12 to 24, 43% of First Nations people and 50% of Inuit were non-drinkers. The corresponding percentage for their non-Aboriginal peers was 36%, the same percentage reported by Métis in this age group.

Table 6
Selected health behaviours of population aged 12 and over, by selected Aboriginal identity group and age group, Canada, 2012

	Total Aboriginal identity population (excluding reserves)	Off-reserve First Nations people	Métis	Inuit	Non-Aboriginal identity population
	percent				
12 to 24					
Daily smoking	18.4	17.1	16.0	45.2	9.7
Heavy drinking ¹	40.4	43.0	37.8	40.3	35.5
Non-drinking	40.5	42.9	36.3	49.7	36.1
25 to 44					
Daily smoking	34.5	33.8	32.6	59.3	17.8
Heavy drinking	35.2	36.5	32.8	42.0	28.1
Non-drinking	15.4	16.4	13.3	23.4	17.1
45 and over					
Daily smoking	28.3	28.1	27.1	41.0	15.4
Heavy drinking	25.0	27.7	22.0	31.7	14.7
Non-drinking	31.1	34.9	26.4	39.7	22.7

1. Heavy drinking refers to the consumption of five or more drinks on one occasion at least once a month in the 12 months preceding the survey.
