Acknowledgement

This study could not have been produced without the contributions made by a number of people. This study was prepared by Jason Aston and Simon Sheldrick under the responsibility of the Assistant Director of the Retail and Service Industries Division, Serge Grenier, and the Director of the Retail and Service Industries Division, Frederick Barzyk. The authors would like to thank the reviewers for their help and constructive suggestions.

Review Committee:

Jason Aston, Simon Sheldrick, Matthew Briggs, Kimberley Evans, Daisy Locke, Guy Gellatly, Frederick Barzyk, Serge Grenier, Marie Brodeur and André Loranger of Statistics Canada.

Data verification work completed by Andrew Sheldrick and staff in the Sub-Annuals section of the Retail and Service Industries Division was also greatly appreciated.

The authors also gratefully acknowledge the work undertaken by Andrew Fields of the Labour Statistics Division of Statistics Canada.

Finally, the contributions made by Dissemination Division in terms of producing the text, charts and tables are gratefully acknowledged.

Retail: The Year 2013 in Review

by Jason Aston and Simon Sheldrick

1 Introduction

Retail sales expanded by 3.2% in 2013, with higher sales in all provinces. In volume terms, total retail sales rose 2.9%, the highest growth rate posted since 2010.

After strong sales growth in the first three quarters of 2013, monthly sales slowed in the final quarter in certain subsectors following severe weather conditions.

In the first nine months of 2014, retail sales were up 4.5%, compared to the same period in 2013.

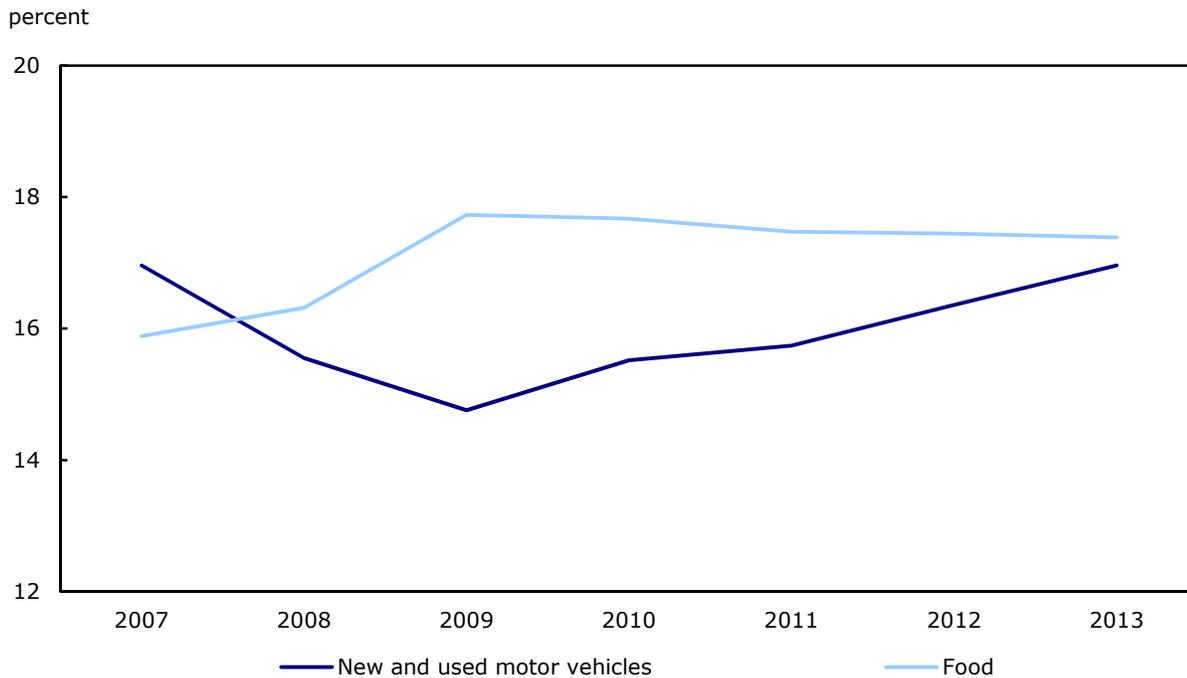

The principal contributor to the 2013 gain was the motor vehicle and parts subsector as an all-time record number of passenger cars and trucks were sold. The general merchandise stores subsector saw an increase of sales in 2013, as it continued to increase its share of food and beverage sales. Meanwhile, sales at food and beverage stores had their largest annual increase since 2010. Electronics and appliance stores was the only subsector to register a decline in sales for the year.

Total employment in the Canadian retail industry grew 1.5% in 2013.

Food and motor vehicles continue to account for the largest shares of retail spending in Canada. The share of retail spending for food (+17.4%) was slightly higher than that of motor vehicles (+16.9%), the smallest difference since 2008.

This change marks a return to the spending patterns of consumers prior to the economic downturn of 2009. At that time, the share of motor vehicle sales was 2.9% lower than the food share.

2 Auto sales led the growth in retail spending in 2013

Sales in the motor vehicle and parts dealers subsector increased 6.3% in 2013. The main contributor to the increase was a 6.4% advance in sales at new car dealers, their largest annual gain since 2010. New trucks, vans, minivans & sport-utility vehicles (+12.0%) and automotive parts and accessories (+3.6%) led the growth.

According to the New Motor Vehicle Sales Survey, the number of new cars and trucks sold increased 6.9% in 2013, the highest annual growth since 2010. A total of 1,776,461 units were sold, setting an all-time record. There were record unit sales in seven of twelve months in 2013.

Sales at gasoline stations rose 3.5%. National retail pump prices peaked at \$1.35 per litre in July with the higher demand of the summer driving season.¹ Overall, national retail gasoline prices followed a similar pattern as in the previous two years. Most of the fluctuations in retail gasoline prices were largely a result of crude oil price fluctuations.²

3 Food sales in 2013 reflected changing business models

Sales at food and beverage stores rose 1.0%. The majority of the gains came from a 1.1% rise in sales of food. According to the Consumer Price Index, the prices of food purchased from stores rose 1.1%.

General merchandise stores continued their expansion into the food market rising 3.5% in 2013. Receipts from food and beverage sales rose 9.2% in 2013, increasing their share of total retail spending on food and beverages by 0.9 percentage points to 14.3%. Conversely, the share of total retail food and beverage sales at food and beverage stores fell to 80.7%, a decrease of 1.1 percentage points from 2012. Over a ten year period beginning in 2004, the market share of food sales at food and beverage stores has decreased on average 0.9% each year.

4 Sales of electronics declined in 2013

Following a 4.6% decrease in 2012, electronics and appliance stores (-3.1%) was the only subsector to decline in 2013. While monthly sales in this subsector are influenced by new product releases, they have been trending downwards since mid-2011. Sales of home electronics, computers and cameras at electronics and appliance stores declined 4.8%, the commodity grouping's second annual negative posting. Higher receipts of household appliances (+2.9%) mitigated the losses within the subsector.

Chart 3
Seasonally adjusted retail sales

Source: Statistics Canada, CANSIM, table 080-0020.

Total employment in the retail trade industry grew 1.5% to reach 1.9 million in 2013, accounting for 12.4% of total employment in Canada. Job increases in Ontario (+1.7%) and Alberta (+3.6%) accounted for much of the gain. Retail trade employment in the Atlantic Provinces was unchanged as gains in Newfoundland and Labrador (+3.1%) were offset by declines in Nova Scotia (-0.9%), Prince Edward Island (-2.9%) and New Brunswick (-0.3%).

Employment grew significantly in the food and beverage stores subsector (+1.9%) on the strength of higher employment at grocery stores, particularly in Ontario and Quebec. Motor vehicle and parts dealers employment advanced (+3.7%) as did clothing and clothing accessories stores (+1.9%). Industry restructuring was a major factor in employment declines at general merchandise stores (-1.6%) and electronics and appliance stores (-5.0%).

Table 1
Employment growth by retail trade subsector (NAICS)

Retail Subsector	Employment		Employment Growth	
	2012	2013	2012	2013
	number		percent	
Motor vehicle and parts dealers	189,159	196,118	2.1	3.7
Furniture and home furnishing stores	71,732	74,005	2.8	3.2

5 Sales growth strongest in the Prairie Provinces

Retail sales advanced in every province in 2013. For the second consecutive year, Alberta (+6.9%) registered the highest rate of retail sales growth in Canada. Higher sales at motor vehicle and parts dealers (+13.4%) and, to a lesser extent, gasoline stations (+7.7%) contributed to the increase. According to the New Motor Vehicle Sales survey, 6.9% more vehicles were sold in 2013, with increases in sales of passenger cars (+1.8%) and trucks (+9.7%). Sales of new motor vehicles in Alberta have been trending noticeably upwards since 2010. General merchandise store sales rose 5.4%.

Following a 1.6% gain in 2012, retail sales in Ontario (+2.3%) advanced for the fourth consecutive year. Higher sales were reported at motor vehicle and parts dealers (+3.3%), food and beverage stores (+1.9%) and building material and garden equipment and supplies dealers (+6.3%).

Retail sales rose in Quebec (+2.5%) for the fourth year in a row. Sales at motor vehicle and parts dealers advanced 3.8% as higher sales of new trucks more than offset lower sales of new passenger cars. General merchandise stores had a 4.2% sales gain while sales at building material and garden equipment and supplies dealers fell 5.5%.

British Columbia experienced a 2.4% increase in retail sales with higher receipts posted at motor vehicle and parts dealers (+5.4%) and food and beverage stores (+1.9%).

Retail sales in Saskatchewan grew 5.1%, the second highest national growth rate. The advance in Saskatchewan followed a 7.4% gain in 2012 and a 7.3% increase in 2011. The sales growth rate for motor vehicle and parts dealers (+10.1%) was the third highest in Canada. General merchandise stores posted a 6.9% increase.

Following the only provincial decrease in 2012, retail sales in New Brunswick (+0.7%) advanced on the strength of higher sales in 7 of 11 subsectors.
