## Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

## National balance sheet accounts - highlights

Second quarter 2007

National net worth reached \$5.3 trillion by the end of the second quarter of 2007, or \$162,200 per capita. National net worth expanded by \$86 billion (+1.6%) in the second quarter, growing less than any of the previous six quarters.

### Chart H.1

#### Growth in national net worth slows

National wealth (economy-wide non-financial assets) grew 2.3% in the second quarter, abetted by strong economic growth during the quarter. Residential real estate continued to be the major contributor to growth in national wealth, accounting for over half of the gain.

National saving led by governments and corporations contributed to the advance of national net worth in the second quarter. Strong stock markets and residential real estate prices also continued to support the increase in national net worth. However, this gain in the second quarter of 2007 was notably restrained by an increase in Canadians' net foreign indebtedness (with marketable securities on a market value basis). The revaluation caused by a sharp appreciation of the Canadian dollar had a devaluing effect on foreign assets held by Canadians, contributing to Canadians' increased net indebtedness. Foreign acquisition of Canadian corporate assets was also a factor in increased Canadian liabilities to non-residents.

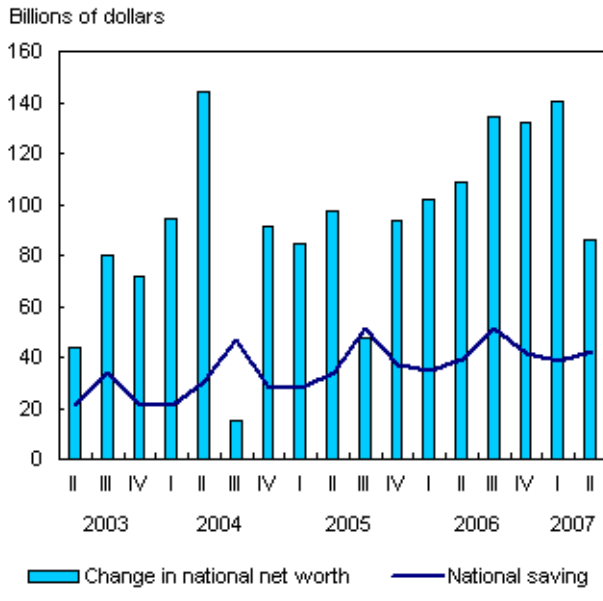

#### Note to readers

The national balance sheet accounts are statements of the balance sheets of all of the various sectors of the economy. They consist of the non-financial assets owned in the various sectors of the economy and of financial claims outstanding. National wealth is the sum of non-financial assets (produced assets, land surrounding structures and agricultural land) in all sectors of the economy. National net worth is national wealth less net foreign liabilities (i.e., what is owed to non-residents less what non-residents owe to Canadians). Alternatively, it is the sum of the net worth of persons, corporations and governments.

National saving is the sum of saving of persons, corporations and governments. National saving and investment contribute to change in national net worth. The revaluation of assets and liabilities is also responsible for changes in national net worth. The causes of revaluation include changes in non-financial asset prices, equity prices, interest rates, exchange rates and loan allowances.

Quarterly series, both book and market value, are available from the first quarter of 1990; market value estimates have been available since June 2004. For more information on the market value estimates, consult *Balance sheet estimates at market value*.

**Chart H.2**  
**Saving and revaluations drive change in national net worth**

### Household net worth gains ease further

Growth in household net worth continued to slow, but still grew 1.9% in the second quarter. Non-financial assets advanced at twice the rate of financial assets, but the growth in liabilities (+2.8%) outpaced that of assets (+2.0%).

The value of financial assets grew at a reduced pace in the second quarter, in part due to the dampening effect of the sharply appreciating Canadian dollar on foreign currency-denominated investments held in mutual funds and pension plans. Nonetheless, pension assets and equities (including mutual fund units), as well as deposits, were the main contributors to growth in financial asset holdings of the household sector during the quarter.

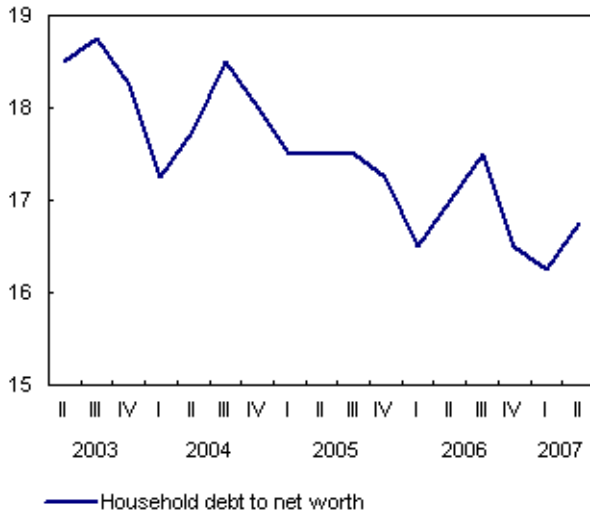

Residential real estate grew slightly faster than in the first quarter, providing the bulk of the increase in non-financial assets. This reflected its relative size among household assets, along with sustained strength in new housing construction and in re-sale activity in the second quarter.

Household debt, the sum of mortgage and consumer credit, accelerated sharply over the second quarter of 2007, outpacing growth in personal disposable income. The strong rise in household debt reflects robust spending on residential real estate and consumer goods during the quarter. This, combined with slackened growth in asset values, were factors behind the rise in the household debt-to-net worth ratio to 17.7%.

### Chart H.3 Household leverage rises

As a % of net worth, not seasonally adjusted data

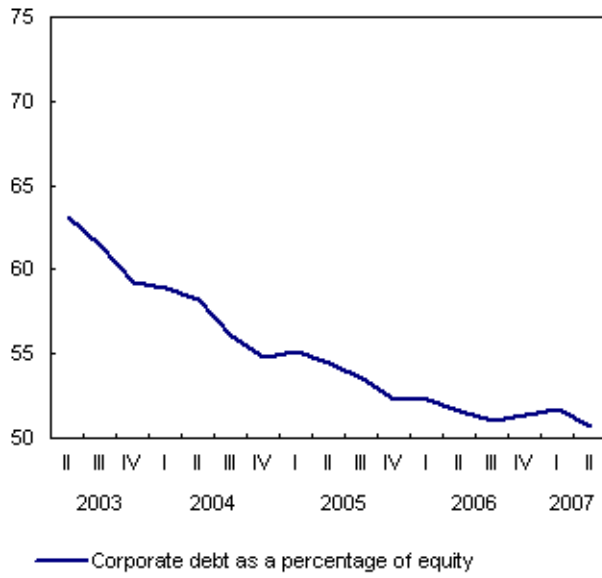

### Non-financial corporate leverage falls

In the second quarter, corporations experienced conditions of sustained growth in net saving, steady business investment and appreciating stock prices. To meet their financing needs, private non-financial corporations turned away from credit market debt and towards share issuance, resulting in a decrease in corporate leverage and resuming the long-term downward trend in the debt-to-equity ratio.

**Chart H.4****Corporate leverage resumes downward trend**

As a % of equity, not seasonally adjusted data

**Total government debt further reduced**

The surplus of all levels of government expanded in the second quarter, and with increases in financial assets coinciding with a reduction in liabilities, the total government net debt (total liabilities less total financial assets) fell for a 13th consecutive quarter. The decrease in total liabilities was led by a significant reduction in short-term paper obligations of the federal government. The net retirement of Government of Canada and provincial government bonds also contributed to this public debt reduction. Net government debt as a percentage of gross domestic product (GDP) declined further, representing less than half of GDP, compared to almost 90% a decade ago.

**Asset growth of financial institutions slows**

Financial institutions, who are traditional net lenders to other sectors of the economy, saw growth in their financial assets decelerate during the second quarter. Sectors primarily involved in investment activities (such as trustee pension plans and mutual funds) felt the impact of the appreciating Canadian dollar though the devaluation of their foreign investment portfolios. This revaluation effect was partially offset by the increased mortgage and consumer credit holdings of sectors primarily involved in lending activities, such as chartered banks.

## Concepts, methodology, data quality

The following information should be used to ensure a clear understanding of the basic concepts that define the data provided in this product, of the underlying methodology, and of aspects of data quality. This information will provide users with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analysed.

### Concepts and variables measured

The **National Balance Sheet Accounts** (NBSA) are statements of the non-financial assets owned/used in the sectors of the economy and of the financial claims outstanding among the economic units in the sectors in the economy. They consist of the **National Balance Sheet** for the nation as a whole, as well as the underlying sector balance sheets.

At the core of the NBSA are assets and liabilities and the concept of wealth, or net worth. In nominal terms, wealth accumulates as the result of: economic and financial activity in the **Income and Expenditure Accounts** and **Financial Flow Accounts**, respectively; and, changes in the prices of assets and liabilities.

### Sector Balance Sheets

The NBSA is an integrated set of balance sheets—non-financial assets, financial assets, liabilities and net worth—for the sectors of the economy. This comprises four major sectors of the economy: persons and unincorporated businesses, corporations, governments and non-residents. The non-resident sector is the detail on Canada's International Investment position. The corporate sector is broken down into a number of sub-sectors with the bulk of this detail comprising the balance sheets of the financial institutions, reflecting the importance of the financial system. The government sector assets and liabilities are available by level of government. In total, there are 30 unique sectors in the NBSA. Financial instruments covered include deposits, bonds, shares, short-term paper, trade accounts, consumer credit, mortgages etc. Users can access credit market debt of the sectors, gross and net debt of government sectors, the structure of household net worth, the composition of the assets of the large institutional investors to name some uses.

### National wealth; National net worth

Sector balance sheets excluding the non-resident sector can be aggregated to produce the **National Balance Sheet** (NBS). **National Wealth** is defined as the sum of the non-financial assets in the economy. The standard measure is comprised of produced assets (residential structures, non-residential structures, machinery and equipment, consumer durable goods, inventories) and land. A broader measure of wealth is produced annually which includes the value of natural resources—specifically, timber and major deposits of subsoil assets.

National economies are either net creditor or net debtors, with respect to their financial position vis-à-vis the rest of the world. **National Wealth** adjusted for the net international investment position yields **National Net Worth**, and this measure is equivalent to net worth on the NBS.

### Coverage

All traditional assets and liabilities are in scope. Major natural resources are measured, but for certain others (e.g., diamonds, fish stocks) estimates are yet to be developed. NBSA currently excludes certain intangible assets, such as research and development. Human capital is currently out of scope.

#### Valuation

Data are measured in current dollars, though constant dollar estimates of certain components of **National Wealth** will soon be available.

There are two sets of current dollar NBSA data which are published—a set at book values (published at the detailed sector level) and a set at market values (published at the 4 sector level with the corporate sector split between non-financial and financial corporations). Non-financial assets are at current values, in both sets. In the market value NBSA, only tradable securities (assets and liabilities) are estimated at market values.

### Data sources and methodology

The NBSA measure financial positions on a quarterly basis and relies heavily on a wealth of information from various areas of Statistics Canada.

### Sources

A very large amount of information from various survey divisions within the bureau, along with other data, are compiled, integrated and analysed as part of the process of producing balance sheet estimates for the Canadian economy.

Major suppliers of data within Statistics Canada include Agriculture Division, Investment and Capital Stock Division, Income

Statistics Division, Balance of Payments Division, Industrial Organization and Finance Division, Public Institutions Division. There are also a number of external and administrative sources of data used.

**General methodology**

Assets and liabilities, by detailed categories, are compiled for the major sectors of the economy. Data are analysed for time series consistency, links to current economic events, issues arising from the source data, and finally with respect to coherence. Estimates are reconciled with data in the *Income and Expenditure Accounts* and *Financial Flow Accounts*.

For further details on definitions, concepts, sources and methods, please refer to *Financial Flow and National Balance Sheet Accounts – Concepts, Definitions, Sources and Methods*, catalogue no. 13-563E.

**Seasonal adjustment**

Quarterly NBSA data series are largely unadjusted for seasonal variation. However, selected quarterly aggregate data series are available on a seasonally-adjusted basis.

**Revisions**

Statistical revisions are carried out in order to incorporate the most recent information from quarterly and annual surveys, taxation statistics, public accounts, censuses, etc.

Estimates for each quarter are revised when those for subsequent quarters of the same year are published and when those for the first quarter of each of the next four years are published. They are not normally revised again except when historical revisions are carried out, usually once per decade. However, the conversion of the NBSA to quarterly frequency (2003) and incorporation of market value estimates (2004) have resulted in the accounts being open back to 1990 at the time of the first quarter in June of 2003 and 2004.

**Reference period**

Data are released approximately 75 days after the reference period.

**Data quality (accuracy)**

No direct measures of the margin of error in the estimates can be calculated. The quality of the estimates can be inferred from analysis of revisions and from a subjective assessment of the data sources and methodology used in the preparation of the estimates.

**Comparability of data and related sources**

It is not possible to produce an equivalent to the National Wealth or National Net worth; nor is it possible to construct a balance sheet for the household sector, except periodically from household surveys. However, certain sub-sectors of the NBSA are largely comparable to estimates produced by source data divisions (e.g., pension funds, levels of government).
