## **Note of Appreciation**

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## National balance sheet accounts - highlights

Fourth quarter 2007 and annual 2007

National net worth reached \$5.5 trillion by the end of the fourth quarter of 2007, or \$165,400 per capita. National net worth grew by \$77 billion in the quarter, an increase of 1.4% over the previous quarter, a somewhat faster pace than the 1.0% in the previous quarter.

### Chart H.1

#### Growth in national net worth up

National wealth (economy-wide non-financial assets) rose 1.3%, a third consecutive quarter of deceleration set against the backdrop of a slowing economy in the fourth quarter.

Although housing investment cooled during the quarter, residential real estate remained the major contributor to the increase in national wealth, accounting for more than half of the gain.

#### Note to readers

The national balance sheet accounts are statements of the balance sheets of all of the various sectors of the economy. They consist of the non-financial assets owned in the various sectors of the economy and of financial claims outstanding.

**National wealth** is the sum of non-financial assets (produced assets, land surrounding structures and agricultural land) in all sectors of the economy.

National net worth is national wealth less net foreign liabilities (i.e., what is owed to non-residents less what non-residents owe to Canadians). Alternatively, it is the sum of the net worth of the persons and unincorporated business, corporate and government sectors.

**National saving** is the sum of saving of the persons and unincorporated business, corporate and government sectors. National saving and investment contribute to change in national net worth.

The revaluation of assets and liabilities also contributes to changes in national net worth. The causes of revaluation include changes in non-financial asset prices, equity prices, interest rates, exchange rates and loan allowances.

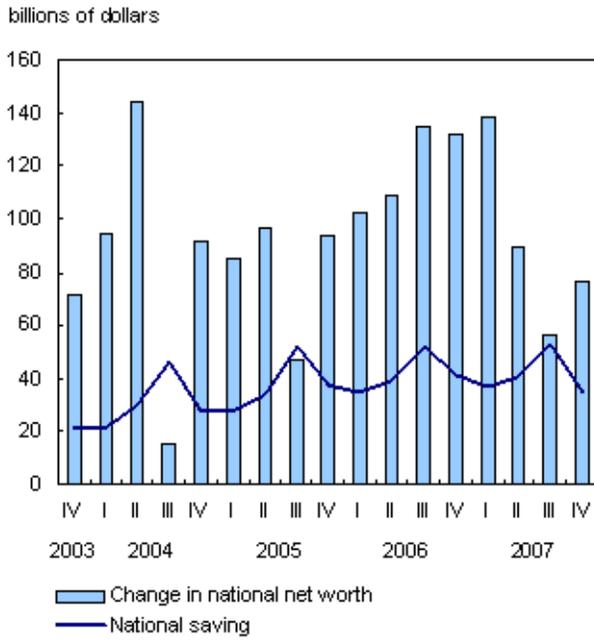

Quarterly series, both book and market value, are available from the first quarter of 1990. For more information on the market value estimates, consult the *Balance sheet estimates at market value* page of our website.

Sustained saving led by both corporations and government, alongside price gains for non-financial assets, largely accounted for the pick-up in the growth of national net worth. The gain in national net worth was also supported by a slight decrease in Canada's net foreign indebtedness (with marketable securities on a market value basis).

Propelled by the largest inflow of foreign direct investment in eight years, Canada's net foreign direct investment position decreased nominally in the fourth quarter of 2007. The sustained strength of the Canadian dollar continued to have a dampening effect on national net worth.

## Chart H.2

### Revaluations of assets drive increase in national net worth

### Household net worth grows at slower pace

Household net worth edged up 0.1% during the fourth quarter, as the decline in financial assets coupled with the increase in liabilities largely offset the impact of growth in non-financial assets.

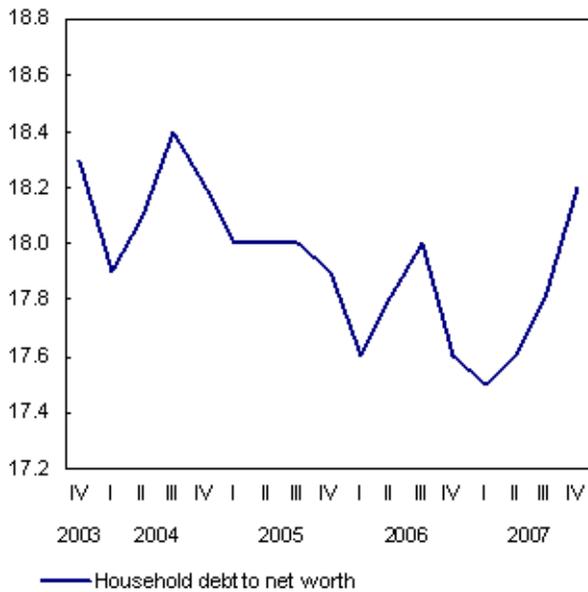

While household debt (consumer credit and mortgage liabilities) increased at a significantly slower pace than the two previous quarters, household sector leverage rose. Debt stood at 18.2% of household net worth by year end 2007.

With new housing prices holding steady during the quarter, coupled with sustained new housing construction and renovation activities, residential real estate continued to expand, although at a reduced rate from the two previous quarters. The increase in the value of residential real estate remained the main contributor in the growth in non-financial assets.

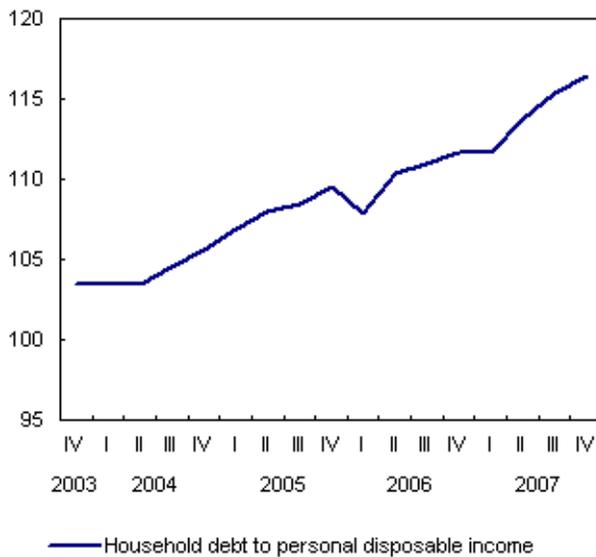

A resilient residential real estate market more than offset the impact of a downturn in stock markets. The value of financial assets fell slightly as the decline in equities more than offset the increase in holdings of pension assets and deposits.

**Chart H.3****Household leverage continues to rise**

as a % of net worth, not seasonally adjusted data

**Chart H.4****Household debt-to-income ratio up slightly**

as a % of personal disposable income, seasonally adjusted data

### Non-financial corporate sector continues to post surplus

Boosted by a significant increase in undistributed corporate profits in the fourth quarter, and while continuing steadily to invest in plant & equipment and build up inventories, the non-financial corporate sector remained a net lender to the rest of the economy.

Despite this surplus, the demand for funds increased during the quarter. In particular, the private non-financial corporate sector turned mostly to loans to address their financing needs. Leverage for these corporations decreased, though marginally, for a third consecutive quarter.

#### Chart H.5

#### Corporate leverage declines slightly

as a % of equity, not seasonally adjusted data

### Asset growth of financial institutions accelerates

Financial institutions continued to accumulate financial assets in the fourth quarter, though at a reduced pace. This increase was led by institutional lenders, driven by gains in their mortgage holdings, consumer credit and loan assets.

### Government net debt rebounds

As overall government surplus contracted in the fourth quarter, total government net debt edged up after 14 consecutive quarters of decline. Government financing activity was dominated by the issuance of short-term paper and provincial bonds. Despite the marginal rise in government net debt, the net debt-to-gross domestic product (GDP) ratio managed to hold steady, with net debt in the fourth quarter accounting for less than half of GDP, down considerably from over 90% attained in 1996.

**Annual review 2007****National balance sheet improves but at slower pace**

National net worth expanded 7.0% in 2007, significantly down from the growth of 10.3% registered in 2006. This deceleration could be traced to the combined effect of a slight decline in national saving and an increase in net foreign debt.

National wealth grew by 8.0%, up from 7.6% in 2006. Residential real estate assets remained the main factor in the expansion of national wealth, accounting for over 60% of the increase.

**Natural resource stocks grow on strength of strong demand and higher prices**

A broader measure of national wealth (that is, including natural resources) increased 6.8% in 2007, up from the 5.9% growth registered in 2006. The value of selected natural resources (timber, energy and minerals) rose 1.2% to \$1,095 billion in 2007, following a slight decrease of 1.5% in 2006 and a substantial increase of 27.7% in 2005.

Increases in the value of minerals and crude bitumen more than offset the declines in the values of natural gas and timber. Natural gas reserve values declined substantially as a result of decreasing production and increasing costs. Crude oil, crude bitumen and mineral reserve values rose, the latter on the strength of strong international demand and higher market prices.

## Concepts, methodology, data quality

The following information should be used to ensure a clear understanding of the basic concepts that define the data provided in this product, of the underlying methodology, and of aspects of data quality. This information will provide users with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analysed.

### Concepts and variables measured

The **National Balance Sheet Accounts** (NBSA) are statements of the non-financial assets owned/used in the sectors of the economy and of the financial claims outstanding among the economic units in the sectors in the economy. They consist of the **National Balance Sheet** for the nation as a whole, as well as the underlying sector balance sheets.

At the core of the NBSA are assets and liabilities and the concept of wealth, or net worth. In nominal terms, wealth accumulates as the result of: economic and financial activity in the **Income and Expenditure Accounts** and **Financial Flow Accounts**, respectively; and, changes in the prices of assets and liabilities.

### Sector Balance Sheets

The NBSA is an integrated set of balance sheets—non-financial assets, financial assets, liabilities and net worth—for the sectors of the economy. This comprises four major sectors of the economy: persons and unincorporated businesses, corporations, governments and non-residents. The non-resident sector is the detail on Canada's International Investment position. The corporate sector is broken down into a number of sub-sectors with the bulk of this detail comprising the balance sheets of the financial institutions, reflecting the importance of the financial system. The government sector assets and liabilities are available by level of government. In total, there are 30 unique sectors in the NBSA. Financial instruments covered include deposits, bonds, shares, short-term paper, trade accounts, consumer credit, mortgages etc. Users can access credit market debt of the sectors, gross and net debt of government sectors, the structure of household net worth, the composition of the assets of the large institutional investors to name some uses.

### National wealth; National net worth

Sector balance sheets excluding the non-resident sector can be aggregated to produce the **National Balance Sheet** (NBS). **National Wealth** is defined as the sum of the non-financial assets in the economy. The standard measure is comprised of produced assets (residential structures, non-residential structures, machinery and equipment, consumer durable goods, inventories) and land. A broader measure of wealth is produced annually which includes the value of natural resources—specifically, timber and major deposits of subsoil assets.

National economies are either net creditor or net debtors, with respect to their financial position vis-à-vis the rest of the world. **National Wealth** adjusted for the net international investment position yields **National Net Worth**, and this measure is equivalent to net worth on the NBS.

### Coverage

All traditional assets and liabilities are in scope. Major natural resources are measured, but for certain others (e.g., diamonds, fish stocks) estimates are yet to be developed. NBSA currently excludes certain intangible assets, such as research and development. Human capital is currently out of scope.

#### Valuation

Data are measured in current dollars, though constant dollar estimates of certain components of **National Wealth** will soon be available.

There are two sets of current dollar NBSA data which are published—a set at book values (published at the detailed sector level) and a set at market values (published at the 4 sector level with the corporate sector split between non-financial and financial corporations). Non-financial assets are at current values, in both sets. In the market value NBSA, only tradable securities (assets and liabilities) are estimated at market values.

### Data sources and methodology

The NBSA measure financial positions on a quarterly basis and relies heavily on a wealth of information from various areas of Statistics Canada.

### Sources

A very large amount of information from various survey divisions within the bureau, along with other data, are compiled, integrated and analysed as part of the process of producing balance sheet estimates for the Canadian economy.

Major suppliers of data within Statistics Canada include Agriculture Division, Investment and Capital Stock Division, Income

Statistics Division, Balance of Payments Division, Industrial Organization and Finance Division, Public Institutions Division. There are also a number of external and administrative sources of data used.

### **General methodology**

Assets and liabilities, by detailed categories, are compiled for the major sectors of the economy. Data are analysed for time series consistency, links to current economic events, issues arising from the source data, and finally with respect to coherence. Estimates are reconciled with data in the ***Income and Expenditure Accounts*** and ***Financial Flow Accounts***.

For further details on definitions, concepts, sources and methods, please refer to *Financial Flow and National Balance Sheet Accounts – Concepts, Definitions, Sources and Methods*, catalogue no. 13-563E.

### **Seasonal adjustment**

Quarterly NBSA data series are largely unadjusted for seasonal variation. However, selected quarterly aggregate data series are available on a seasonally-adjusted basis.

### **Revisions**

Statistical revisions are carried out in order to incorporate the most recent information from quarterly and annual surveys, taxation statistics, public accounts, censuses, etc.

Estimates for each quarter are revised when those for subsequent quarters of the same year are published and when those for the first quarter of each of the next four years are published. They are not normally revised again except when historical revisions are carried out, usually once per decade. However, the conversion of the NBSA to quarterly frequency (2003) and incorporation of market value estimates (2004) have resulted in the accounts being open back to 1990 at the time of the first quarter in June of 2003 and 2004.

### **Reference period**

Data are released approximately 75 days after the reference period.

### **Data quality (accuracy)**

No direct measures of the margin of error in the estimates can be calculated. The quality of the estimates can be inferred from analysis of revisions and from a subjective assessment of the data sources and methodology used in the preparation of the estimates.

### **Comparability of data and related sources**

It is not possible to produce an equivalent to the National Wealth or National Net worth; nor is it possible to construct a balance sheet for the household sector, except periodically from household surveys. However, certain sub-sectors of the NBSA are largely comparable to estimates produced by source data divisions (e.g., pension funds, levels of government).
