## Ordering and subscription information

This product, Catalogue no. 15-001-XIE, is published monthly in electronic format on the Statistics Canada Internet site at a price of CDN \$11.00 per issue and CDN \$110.00 for a one-year subscription. To obtain single issues or to subscribe visit our Web site at [www.statcan.ca](http://www.statcan.ca), and select Products and Services.

This product is also available in print through a Print-on-Demand service, at a price of CDN \$58.00 per issue and CDN \$230.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	<b>Single issue</b>	<b>Annual subscription</b>
<b>United States</b>	CDN \$ 6.00	CDN \$72.00
<b>Other countries</b>	CDN \$ 10.00	CDN \$120.00

All prices exclude sales taxes.

The printed version can be ordered by

- Phone (Canada and United States) **1 800 267-6677**
- Fax (Canada and United States) **1 877 287-4369**
- E-mail **order@statcan.ca**
- Mail

### Revisions

This issue of 15-001-XIE contains revised estimates of Gross Domestic Product by industry back to January 2000.

### Note to users:

The gross domestic product (GDP) of an industry is the value added by labour and capital in transforming inputs purchased from other producers into outputs. Monthly GDP by industry is valued at 1992 prices. The estimates presented here are seasonally adjusted at annual rates.

This publication was prepared under the direction of:

**H. Messinger**, Director,  
Industry Measures and Analysis Division

**R. Evans**, Chief,  
Monthly GDP Section

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at factor cost as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

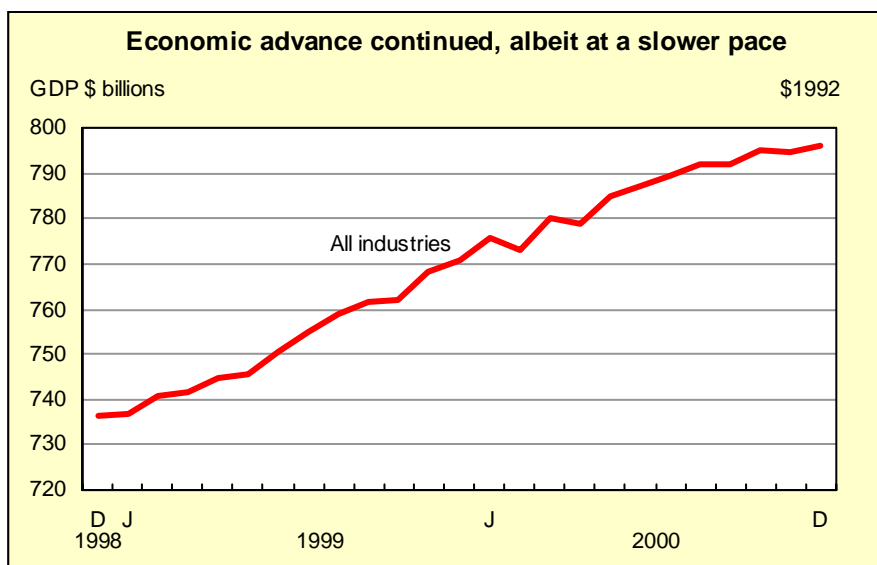

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the Euro-pean Communities, International Monetary Fund, Organization for Economic Co-operation and development, United Nations and World Bank.

# Highlights

## December 2000

Continued weakness in manufacturing held the Gross Domestic Product to a 0.2% gain in December. Excluding the manufacturing sector, output in the rest of the economy rose a more substantial 0.4% in December.

A second sharp drop in the production of telecommunications equipment and a further decline in automotive production continued to plague manufacturers. A majority of the major industry groups in the manufacturing sector reported declines. Forestry companies continued to scale back their logging activities, as a glut in wood product markets showed no sign of easing.

However, most other sectors of the economy made gains in December. The onset of unseasonably cold weather in December sparked a surge in utilities' output. Wholesaling and retailing activity advanced, despite continued slow auto sales. Higher exports of wheat and natural gas buoyed the transportation and warehousing industries. The finance industries were lifted by higher volumes of stock market trading activity.

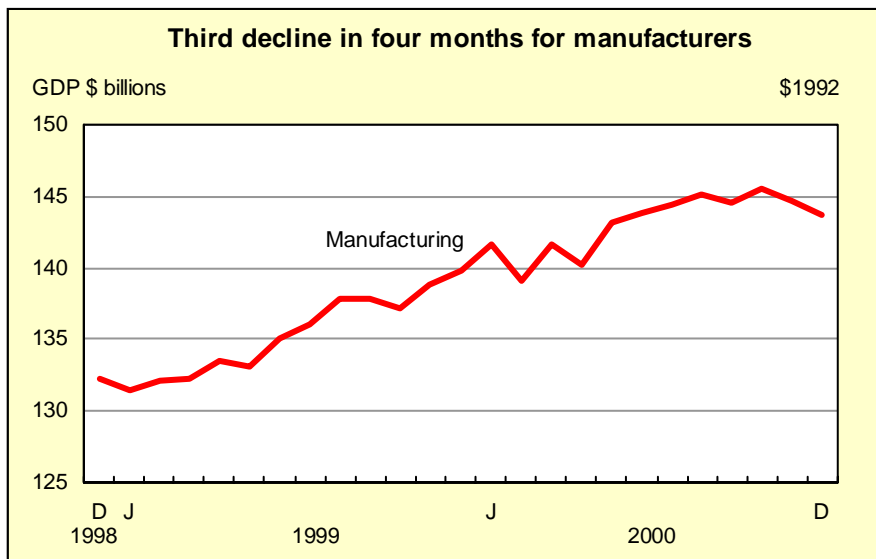

### Broad-based decline in manufacturing

Total manufacturing output fell for the third time in four months, decreasing 0.7% in December. Manufacturers' inventories have generally been rising at a faster rate than their shipments since June, the accumulation of inventories in producers' warehouses being a further indication that demand has been easing. This phenomenon was most pronounced at plants making automotive parts & accessories, primary steel products and wood products.

The month saw a further decline in auto manufacturing and a continuation of the holding pattern that has left electronic equipment production at August levels. December's decline was also fairly broad-based: fourteen of 22 major industrial groups, accounting for about 65% of total manufacturing output, curtailed production. In particular, primary metal, paper and rubber production weakened in December. The largest increases in output were in the food and textile product manufacturing industries.

Manufacturing of electrical & electronic parts was essentially unchanged in December, extending a period of lacklustre growth that began in September. Telecommunications equipment manufacturers continued to suffer from declining demand, leading to a 10.4% drop in production, the third decline in four months. This was offset by higher output of communications components & electronic parts, computers & peripherals, and fibre optic products, as these producers rounded out the year with strong gains.

Flagging consumer demand for motor vehicles continued to afflict the motor vehicle industry, as automotive output declined for a fourth consecutive month in December. Production cutbacks instituted at several plants in November were largely maintained or even augmented in December. Makers of motor vehicles cut output 3.6% in the latest month, while auto parts manufacturers trimmed production 1.2%, compounding sharper declines in the previous month. The exception was engine manufacturing, which bounced back from a November low, the slowdown in that month owing more to temporary production difficulties than to any drop-off in demand.

Production of primary metal products fell 2.2% in December, paralleling the downturn in the auto industry. Primary steel production fell most sharply, but output at steel pipe & tube mills and iron foundries also fell in the month. Activity at non-ferrous smelters remained muted, as uranium processors awaited the beginning of a new quota year in January to resume production. A decline in rubber production was blamed on the downturn in auto production and the high cost of petrochemical inputs.

Several industries that manufacture construction-related goods also curtailed production in December. These included makers of cement products and concrete - which led to a drop in the non-metallic minerals industry - and most wood product manufacturers.

Production of pulp fell 5.8% in December, reflecting an erosion in foreign demand that has seen exports fall in four of the last five months. Although spot prices for pulp rose sharply during the last year-and-a-half, their recent stability is widely seen as an indication they may have peaked, a position further supported by the fact producers' inventories of unsold pulp have been accumulating in recent months.

**Cold snap gave utilities a boost**

The coldest December temperatures in years led to a 2.0% increase in utilities' output. Production of electricity rose 1.7% as a result of the colder weather and higher exports, while gas distribution companies, more oriented toward heating needs, rose by a more substantial 5.0%. The latest gain left utilities' output at a level 5.6% higher than in the same period one year ago.

**Demand for wheat and gas kept the transportation and warehousing sector busy**

Output in the transportation and warehousing sector rose 1.5% in December. An increase in foreign demand for wheat, after a lull in November, led to increased activity at grain elevators and contributed to an advance in the railway industry. Pipeline operators, buttressed by new productive capacity, reported a substantial increase in activity. Natural gas exports rose sharply in December to meet surging demand from the United States.

**Retailing advanced despite poor auto sales**

Consumers loosened their purse strings during the busy Christmas season, but continued to shy away from big ticket items such as automobiles, as retailing activity rose 0.9% in December. It was the largest increase in five months. Stronger sales activity originated from continued growth in grocery store and gas station sales, while sales at department stores and stores that specialize in selling automotive parts rebounded. Gas station sales have been helped by continued growth in the sale of non-gas items.

These gains were partly offset by slower business at clothing stores and pharmacies. December's performance was also noteworthy for the absence of a convincing rebound in sales of motor vehicles, which have been stuck at low levels since a sharp drop in October.

### **Computer surge spurred wholesalers**

Wholesaling activity rose 0.6% in December following a flat November. The latest increase came on the back of an upswing at distributors of computers and software, which increased after dropping in the previous month. Wholesaling of automotive products was little changed in the month. These gains were partly offset by a sharp decline in the wholesaling of non-farm machinery and continuing weakness by dealers of building materials.

### **Stock market activity buoyed finance industries**

Output of financial services rose 0.8% in December. It was the fifth increase in the last six months, and was largely attributable to an increase in brokerage activity, as stock market volumes swelled, and a rebound in the mutual fund industry after strong growth in sales.

### **Other industries**

Construction activity edged up 0.3% in December, growth in engineering construction being mostly offset by a decline in homebuilding. The fall in residential construction, only the second in the last six months, nevertheless left output in this industry short of the previous peak reached in March 2000. Mining industry output fell 0.1% as drilling & rigging activity moderated and potash production slumped. Business service firms were modestly busier in December, the rise being attributable to an increase in the architects, engineers and scientists industry.

## **Fourth Quarter, 2000**

The economy grew 0.5% in the fourth quarter, the slowest rate of advance in over two years. Flagging demand for motor vehicles and electronic products were largely to blame for the slower year-end performance.

Manufacturing output fell 0.1% in the fourth quarter as output of automotive products fell and the heady expansion of the electrical & electronic products industry grew at a more subdued pace. Lower demand for automobiles was also behind a listless performance by retailers that contrasted sharply with that of the third quarter. Wholesalers were only marginally busier, as slumping lumber, hardware and auto sales partly offset gains in computer sales. The output of the forestry industry was adversely affected by a significant decline in logging activity.

However, the fourth quarter saw continued expansion in business, finance, communications & utilities, and government services, while mining output partly recovered from a third quarter decrease.

## **Weaker auto, electronics production put brakes on manufacturing**

Total factory output edged down 0.1% in the fourth quarter, the first quarter decline since the fourth quarter in 1996. Automotive and electronics manufacturers contributed about equally to the slowing of production, as the former declined and the latter experienced an increase that fell far short of previous gains. As in the previous quarter, producers of primary & fabricated metal products and machinery all curtailed production. Overall, eleven of twenty-two major industrial groups, accounting for 51% of total manufacturing production, fell in the fourth quarter. These declines were partly offset by increased production of wood products and chemicals.

Fourth quarter output of motor vehicles and parts fell 6.3% and 6.0%, respectively, the biggest quarterly declines since the industry was hit by strike action in 1998. A sharp drop in exports led many producers to introduce a first round of cutbacks to bring production in line with demand. Indeed, dealer inventories in both Canada and, more importantly, the United States (the destination of over 90% of Canadian-built automobiles) rose sharply in the fourth quarter.

The hectic expansion of the electronics industry abruptly slowed in the fourth quarter, as production of electrical & electronic products grew only 2.9%. This is in marked contrast to the growth in excess of 7% achieved in each of the previous five quarters. The scaling back of investment plans by key clients was chiefly to blame, and primarily affected manufacturers of telecommunications equipment, which reported a small decline in production. Without experiencing outright declines, makers of computers & peripheral equipment and other communications equipment nevertheless posted the smallest gains of 2000. Manufacturers of fibre optic equipment were the only exception, reporting the strongest of quarterly gain of the year.

Production of wood products increased 3.2% in the fourth quarter, reversing a significant decline in the previous quarter. Canadian producers were experiencing export-driven gains from a surprisingly resilient homebuilding market in the United States, where, despite generally declining consumer confidence, housing starts have been gaining steadily during this time. Production of sawed lumber bounced back the most, but manufacturing of sash, door and other milled wood products also rose strongly.

Producers in the chemical industry raised output 2.4% in the year's final quarter, the largest increase in almost three years. A significant expansion in the output of pharmaceutical products was behind the overall advance, as the industry benefited from new capital inflows and a sharp increase in raw material imports. A partial rebound in industrial chemical production also contributed to the quarterly increase.

## **Retailing stopped in its tracks by declining auto sales**

Retailing activity rose a meagre 0.1% in the fourth quarter, as sales of cars and trucks plummeted after a strong third quarter and put the breaks on growth. The slow traffic at auto dealers' lots was disproportionately responsible for the overall sector's weak performance: while dealership sales fell 4.5% in the fourth quarter, sales of all other merchandise actually rose 1.3% during this time. Grocery stores and service stations experienced the strongest growth, the latter benefiting from the steady expansion in the sale of non-gas items.

## **Wholesalers posted smallest gain since first quarter pause**

Fourth quarter wholesale trade grew 0.4%, the poorest performance since the first quarter, when output was little changed because of a pause in computer sales. Growth in the fourth quarter was less than half the pace maintained in the previous two, as demand for computers & software, non-farm machinery, building materials and hardware weakened.

## **Business services growth continued steady**

Business service providers continued to enjoy healthy demand growth in the fourth quarter, pushing output up 2.3%. Strength in firms that provide management consulting and employment & personnel services was particularly pronounced, although growth in computer consulting services also advanced noticeably.

## **Stock market turmoil kept financial service providers busy**

Output of financial services rose 1.2% in the fourth quarter. Most of the increase could be attributed to a sharp increase in the volume of stock market activity which provided a boost to brokerages and other investment dealers. These gains were however tempered by a drop-off decline in mutual fund company activity brought on by the decline in stock market values.

## **Communications and utilities posted strong quarter**

The communication and utilities sector expanded 1.4% during the fourth quarter. Telecommunication carriers contributed most to the increase, their 1.6% pace just slightly off from the 1.7% pace of the previous quarter. Electric power and gas distribution systems contributed most of the balance as autumn temperatures reverted to levels last seen four years ago. Gas distribution systems jumped 4.2%, their fourth consecutive strong increase.

## **Government services growth accelerated**

Government services expanded 1.3% in the fourth quarter, their largest increase in almost ten years. While services provided at the federal level maintained the steady pace of growth that has seen them increase 5.0% since the same three-month period in 1999, significantly sharper growth was observed in provincial government services, which doubled their previous pace.

## **Oil patch rebound spurred mining sector**

Mining output increased 1.2% in the fourth quarter, recovering most of the ground lost during the previous quarter. Mineral fuel production and exploration accounted for much of the growth this quarter. Natural gas production increased in response to record prices and burgeoning demand. Output of crude petroleum, still hampered by plant maintenance shutdowns during the early part of the quarter, increased only slightly. Drilling & rigging activity increased substantially after being hampered by poor weather as well as equipment and personnel shortages in the previous quarter.

## 2000

Gross Domestic Product rose 4.5% in 2000, the second consecutive year of solid economic performance. The gain in economic output was largely driven by industries producing computer and telecommunication goods and services.

Manufacturers played a key role in pushing economic output higher, as spectacular gains by producers of electronic goods towered above a broad-based advance by most other industry groups. A gain by business services providers could partly be attributed to strong growth at firms providing computer-consulting services. Communications services activity also rose briskly, driven by increased demand for the expanding services provided by telephone carriers.

Elsewhere, the financial services industry was buoyed by increased stock market activity, wholesale and retail sales expanded, and mining production rebounded strongly in tandem with oil & gas prices.

### Expanding electronics industry led broad-based manufacturing gain

Total manufacturing output rose 5.7% in 2000, essentially matching the previous year's healthy performance. Whereas 1999 saw significant growth in both the automotive and electronics industries, the latter pulled ahead in 2000 while growth in auto production showed little change. Overall, eighteen of twenty-two major industry groups, representing 95% of total manufacturing output, advanced. Of these, the most significant were by makers of furniture, wood and rubber products.

Output of electrical & electronic equipment rose 34.5%, by far the most significant increase in any manufacturing group this size since 1961, when records were first kept. Makers of communications gear led the group (with large gains by producers of telecommunications equipment and communications parts & components), but plants making computers and peripherals also reported stellar growth. Producers of optical fibre posted a very strong year but, contrary to the aforementioned industries, the output gain fell short of 1999's performance.

2000 was also a good year for makers of transportation equipment, but the gain had little to do with the auto industry. Instead, production in this sector was lifted by a second consecutive year of double-digit growth in the aircraft manufacturing industry. Indeed, this industry's decade-long expansion does not show any sign of weakness, continuing to build on swelling order books. Motor vehicle production edged down slightly, after a spectacular 24% gain in the previous year, as consumer demand in the United States dried up. Production of parts advanced modestly; however, while most parts producers showed little change from 1999 or curtailed production, significant increases were posted by makers of plastic parts and other motor vehicle parts.

Furniture makers reported another double-digit gain in production, the third in four years, as export-related demand continued to spur the industry. As was the case during the 1990s, manufacturers of office furniture garnered most of the gains, although producers of household furniture had a good year. Exports of these goods rose 11.5% in the year 2000.

Wood producers, with a 3.6% gain, had a comparatively slower year, as 1999's heady expansion in housing markets in both Canada and the United States slowed markedly in 2000, betraying the effects of strikes, weakening consumer sentiment and the quota-based restrictions of the Softwood Lumber Agreement. The slowdown was most evident at factories producing sawn lumber and particleboard, where production was little changed following strong gains in 1999.

However, strong export demand continued to spur producers of sash, door & other millwork. Moreover, other construction-related industries, less narrowly focussed on the residential component, saw healthy gains in 2000, including producers of structural and ornamental & architectural metal parts, and construction and mining machinery.

### **Finance industries lifted by stock market turbulence**

Financial services activity rose 7.1% in 2000, riding the roiling stock market's ups and downs. Both the bank and the other finance industries saw strong gains, as record stock market volumes generated commissions for those engaged in brokerage activities, and the valuation highs reached during the year translated into strong revenues for mutual fund operators. Although the banking industry profited from the stock market, more than two-thirds of their reported gains was attributable to their more traditional lines of business. Consumers' continuing appetite for durable goods translated into demand for consumer credit that helped propel the consumer finance industry.

### **Business services continued to expand**

Business services activity grew 10.1% in 2000, the second largest increase in the last decade as an increasing number of firms outsourced more of their non-core operations. While computer consultants contributed about a third of the sector's overall increase, this was matched by an equally large increase at firms that provided temporary help, management consulting and other business services. Architectural, engineering & scientific services firms were also significantly busier in the latest year.

### **Retailing growth sped up in 2000**

Record car sales sparked retailing, which registered 5.8% growth, its highest since 1997. Strong incentives offered by car dealers contributed to this industry's dynamism. Although all but one sector saw an increase this year, customer traffic increased significantly at furniture stores, gas stations and grocery stores. The only exception was the shoe industry, where a sixth consecutive annual retreat left sales at 1992 levels.

### **Weaker computer sales led to a slower wholesale gain**

More subdued growth in computer & software sales held the wholesaling industry to a 5.0% gain, the smallest gain in four years. This was in marked contrast to the previous year's performance, when rapidly expanding computer sales, that could partly be attributed to preparations for the year 2000 switchover, had driven wholesaling activity to a 12.0% annual gain. Sales of autos and parts, which also advanced at a slower pace in 2000 in the wake of 1999's sizeable expansion, likewise contributed to wholesalers' more modest gain.

### **Communications industries buoyed by strong growth at telephone carriers**

GDP in the communications industries rose 10.0% in 2000, in the wake of a 13.7% increase in the previous year. The sector's large increase, driven primarily by the telephone carrier industry, reflected the continuing expansion of telecommunications services such as long distance and cellular services. The cable television industry also continued to show healthy growth.

## **Soaring oil & gas prices gave mining sector a boost**

Mining activity increased 6.4% in 2000 after two years of decline. The growth came almost solely as a result of an increase in oil and gas production and its corresponding drilling and rigging services, which were spurred by soaring fuel prices. Output in the volatile drilling & rigging industry rose 43.1%, accounting for almost two-thirds of the sector's overall advance. Expanding natural gas capacities in northern and eastern Canada helped propel natural gas output. Crude output was enhanced by a boost in heavy oil production as higher oil prices made it more economical to produce.

## **Other industries**

The overall increase in goods production translated into increased demand for transportation services, whose output grew 5.6%. Gains by trucking and rail service companies accounted for the lion's share of the increase. Government services expanded for a third consecutive year, rising 2.6%. Most of the increase came from a jump in federal government activity, although provincial services also increased.

\* Data not available after 1994.

\*\* For some of the lowest levels of aggregation, it is not possible to have an homogeneous series from 1961 to the present. For that reason, special industry groupings that provide relatively good continuity were created back to 1961.

## Appendix IIa - GDP by Industry: Overview

### 1. Gross Domestic Product by Industry at Factor Cost, at Constant Prices

#### Definition

Gross Domestic Product (GDP) by industry at factor cost is a measure of the economic production which takes place within the geographical boundaries of Canada. As the name suggests, it is designed to show the industrial distribution of total output. GDP for a single industry is also referred to as net output, or value added. Conceptually it is equal to the total value of production by the industry (gross output) less the value of inputs purchased from other industries or imported (intermediate inputs). Primary factors of production, such as labour and capital, produce gross output by adding value to the intermediate inputs. Value added can therefore also be derived as the remuneration to the primary factors of production, that is as the sum of labour income, depreciation, and profits. GDP for the economy as a whole is the sum of net output, or value added, for all industries. Summing net rather than gross outputs avoids double counting the output of one industry which is an intermediate input to another.

The term "gross" in Gross Domestic Product means that capital consumption costs, that is the costs associated with the depletion of capital assets (buildings, machinery and equipment), are included. The expression "at factor cost" means that production is valued at the cost of production rather than at market prices, which include indirect taxes but exclude subsidies. GDP valued at "factor cost" excludes indirect taxes but includes subsidies.

"Constant prices" means that the estimates are valued at the prices that prevailed in some base year rather than those of the current year. As a result changes in the estimates of value added by industry reflect changes in the physical volume of production, and do not reflect changes that are simply due to price fluctuations. With this publication, the base year for constant price estimates is 1992.

### 2. Differences Between Industry-Based and Expenditure-Based GDP

#### 2.1 Differences in Objectives

The Canadian System of National Accounts (CSNA) publishes two constant dollar subannual measures of Gross Domestic Product: (1) the monthly GDP by industry and (2) the quarterly expenditure-based GDP. Both measures are designed to measure total production in Canada, but serve different analytical purposes. GDP by industry provides information about the sources of output, while the expenditure-based GDP shows the disposition of output among the various categories of final demand. The two series yield similar results, but because of conceptual, statistical and methodological differences, they are not identical.

#### 2.2 Conceptual Differences: Factor Cost and Market Price Valuation

Because expenditure-based GDP is viewed from the perspective of purchasers, the analysis is concerned with final demand categories such as personal expenditure, government expenditure, capital formation, and exports and imports. Output is valued at *market prices*, which reflect what purchasers actually pay for the goods and services. Market price valuation includes indirect taxes such as sales and excise taxes, licences, property taxes, etc., and excludes subsidies.

When the output of goods and services is looked at in terms of the industries which produce them, valuation is confined to the costs incurred in producing the products. Various taxes on expenditure (indirect taxes) are excluded while government subsidies are included. Indirect taxes fall more heavily on some products (for example liquor or tobacco) than on others, and consequently the contribution of specific industries to total GDP is more accurate if such taxes are not taken into consideration. GDP by industry is therefore estimated on a *factor cost* basis.

Whether GDP is calculated by the industry or the expenditure approach, the two totals should in principle be different only in net indirect taxes (indirect taxes less subsidies), but in fact there are some statistical discrepancies as well.

## 2.3 Statistical Differences

The estimates of monthly GDP by industry and the quarterly expenditure-based GDP are built up somewhat independently. The estimates are prepared using various data sources which, in addition to being weighted differently, also result from different estimation methods. For example, the industry-based estimates do not rely on data for exports but are based on manufacturers' shipments data. The expenditure-based estimates of GDP use exports, but not shipments. Since exports by manufacturers must have been shipped, both systems will reflect the same underlying activity. However, since they do so via different statistical vehicles, there will be statistical differences between the two systems.

## 3. Methodological Overview: GDP by Industry

### 3.1 Annual Benchmarks

For all but the most recent two years, the annual estimates of GDP by industry are derived within the framework of the Input-Output accounts by subtracting the intermediate inputs from the gross output of industries. The data sources are typically annual surveys or censuses. For the most recent two full years and part of the current year, GDP is estimated using the monthly methodology described below.

### 3.2 Monthly Estimates

On a monthly basis information on industry activity, especially the consumption of inputs, is not as complete as it is annually. As a result, the monthly values of GDP by industry are projections, estimated using proxy indicators such as gross output or employment, usually obtained from monthly surveys (see Appendix IIb). The main assumption inherent in the monthly projector system is that the relationship between inputs and outputs changes slowly enough that it can be regarded as constant over short spans of time. This assumption will be true if both technology and the product mix change slowly. It is therefore more useful for projecting GDP over short time spans than over long ones, and at lower levels of industrial disaggregation, where product mix is relatively homogenous and stable. Prices of inputs and output do not necessarily evolve at the same pace during a given period. As a result, the relationship between inputs and output can be distorted at current prices. For that reason, the assumption above only applies to the calculation of GDP at constant prices.

### 3.3 Benchmarking

This is the process by which monthly estimates are adjusted to the new benchmark levels. Since the monthly estimates are projections, they are adjusted to sum to the annual benchmark levels once they become available. This adjustment is based on a quadratic minimization technique, which preserves the month-to-month movements in the original series as much as possible, subject to the constraint that the monthly estimates sum to the annual benchmarks.

### 3.4 Seasonal Adjustment

To aid interpretation of economic developments the estimates of GDP by industry are seasonally adjusted and are published in both seasonally adjusted and unadjusted forms. Seasonal adjustment removes movements caused by repetitive climatic or institutional events, thereby making the underlying activity more apparent.

The seasonal adjustment technique relies heavily on the use of moving averages, that become less reliable towards the end of the series. To minimize this problem, the series are projected one more year so that the last real data point is 12 months from the end point of the extended series. An ARIMA (autoregressive integrated moving average) model is used for this purpose.

### 3.5 Trading-Day Adjustment

In many monthly economic time series a significant portion of the monthly growth rate is associated with differences in the composition of calendar months. For example, the volume of production usually varies with the different days of the week, and since consecutive months contain different combinations of days, a significant portion of the

month-to-month changes may be caused strictly by the calendar. To give a more precise idea of economic developments, the calendar months are put on an equalized basis. This is done by applying a smoothing procedure, known as trading-day adjustment. Trading-day adjustment alters the distribution of monthly output to reflect changes in production that would occur if all months contained the same number and type of days.

### 3.6 Rebasing

In order to analyse the behaviour of GDP independently of the influence of price changes, GDP is calculated for each industry in constant prices. In loose terms, constant price measures inform about the volume of goods and services produced, independently of changes in prices. Such series are calculated by choosing a reference period in the past, called the base year, and valuing current production of goods and services in the prices of that year.

The selection of the base year can have significant consequences, as different base years may yield different growth rates in total GDP and other aggregates. Consider an industry whose output price has declined, relative to that of other industries, between two years. The contribution of this industry to total output will be larger when valued in prices of the earlier period since the relative price was larger in that period, and movements in this industry will have more impact on movements in total output. If the industry is growing faster than average, valuing output in prices of the earlier period will result in a total GDP measure that grows faster than it would were output valued in prices of the later period.

A notable example is the computer industry, in which soaring output and accelerating quality changes were combined with rapidly falling prices during the 1986 to 1992 period. In 1986, the computer industry comprised a mere 0.2% of total GDP, and this proportion remained flat in current prices between 1986 and 1992. However, when production was valued in 1986 prices, the industry's contribution to total real GDP rose to 0.6% by 1992. This means that changes in current price output were magnified through deflation, giving enhanced importance to the computer industry in the constant price series.

Ideally the base year is a typical year, followed by a number of years in which the relative prices of commodities remain stable. In a dynamic economy, however, relative prices constantly shift due to such factors as uneven technological developments in different industries, variations in productivity, shifts in consumer demand, cycles in economic growth and so on. The more remote a base year becomes in time, the more today's relative prices will have changed compared to those of the base year, and the less prices of the base year will be relevant for the current period. The usefulness of constant price estimates therefore diminishes as we move away from the base year. The rate of obsolescence depends on the degree of relative price change.

The frequency of rebasing is a compromise between using a more representative reference period and maintaining a stable definition of output for a reasonable length of time. In Canada rebasing has traditionally been done at 10-year intervals: 1961, 1971, and 1981. Since 1986, the rebasing is now done at shorter intervals of five to six years. This conforms to U.N. recommendations regarding the frequency of rebasing.

With the release of the October 1997 data, a new base year was adopted. The year 1992 (previously 1986) became the new base year for the constant dollar estimates. At the same time, the monthly GDP estimates were adjusted to a new set of Input-Output Tables, which were revised to conform more closely to international standards as described in System of National Accounts 1993.

#### Major Changes Introduced by the Historical Revision:

With this historical revision, FISIM (financial intermediation services indirectly measured), an imputation which prescribes that net interest received be used when measuring the banking industry's contribution to GDP, has now been extended to credit unions and trust, mortgage and consumer loan companies.

In the past, banking activities were deconsolidated so that output of banks would only reflect deposit-lending type of activities. Other activities related to brokerage or mutual fund activities were classified in other financial services. When conducted by banks, these activities now remain part of the banking industry.

The "Royalties industry" disappeared and the royalty payments on natural resources are now part of the surplus of the extracting industry. In other words, royalties are considered a return on natural resources or investment income. This will increase the GDP in the mining sector while reducing it in finance, insurance and real estate industries.

General exploration expenses as well as geological and geophysical expenses are now considered capital expenditures. As a result, inputs in the mining sector will be lower, and GDP higher while it will be the opposite in several engineering construction industries.

A large portion of the GDP in gambling operations is considered a "profit" by lottery Corporations. This amount is now considered an indirect tax. As a result, GDP related to gambling operations will be lower.

Also, a new classification, closer to the one proposed by the 1980 SIC was adopted. The classification changes are covered in more detail in the next section.

#### 4. Classification

The industrial classification framework used in the preparation of the monthly GDP estimates follows fairly closely the Standard Industry Classification of 1980 (1980 SIC). At the highest level of aggregation, industries are regrouped in 18 categories which correspond to the "Divisions" of the 1980 SIC. Divisions are identified by a letter and often referred to as a one-digit level.

##### Divisions

- A. Agricultural and related services industries
- B. Fishing and trapping industries
- C. Logging and forestry industries
- D. Mining (including milling), quarrying and oil well industries
- E. Manufacturing industries
- F. Construction industries
- G. Transportation and storage industries
- H. Communication and other utility industries
- I. Wholesale trade industries
- J. Retail trade industries
- K. Finance and insurance industries
- L. Real estate operator and insurance agent industries
- M. Business services industries
- N. Government service industries
- O. Educational service industries
- P. Health and social service industries
- Q. Accommodation, food and beverage service industries
- R. Other service industries

Divisions are further subdivided into three lower levels. The highest one being the major group which is essentially a two-digit level. Food and wood industries are among the 22 major groups that compose manufacturing. Transportation services and pipeline transport also represent major groups. The last two levels correspond mostly to three- and four-digit levels as defined in the 1980 SIC.

In order to provide detail below the two-digit level in certain industries, notably among services producing industries, it was necessary to create new groupings of three- or four-digit industries due to data gaps. Those groupings are identified and defined in Appendix I. The appendix also shows the relationship between the monthly industrial classification system and the worksheet (W) level in the Canadian Input-Output framework from which industry benchmarks are derived.

Monthly GDP estimates are compiled back to 1961. At the lowest level of aggregation of the current industrial classification framework, it is not always possible to have an homogeneous series from 1961 to the present. Data gaps as well as changes in the SIC classifications of 1961, 1971 and 1980 are responsible for this.

With the introduction of a new SIC, establishments are sometimes reclassified from one industry to another. Thus an industry with a similar name in two different SIC's may have a somewhat different composition in terms of establishments.

In some cases the differences will be small, and in others large. In general there is greater such definitional discontinuity at lower levels of industrial dis-aggregation than at higher levels. For some purposes it is useful to have definitional continuity at as low a level of dis-aggregation as possible. For this reason, special industry groupings that provide relatively good continuity were created back to 1961. These groupings are identified with an asterisk (\*\*\*) in Appendix I.

The groupings were determined based on two criteria. Near equality of value added under the new and old definitions was a necessary but not a sufficient criterion. The value added of incoming establishments could be large and nearly equal to the value added of outgoing establishments. In this case, the composition of the industry would have changed substantially while the overall value added would have changed only marginally. As a result, a second criterion was introduced to define continuity: the value added of incoming and outgoing establishments had to be small relative to the total value added before reclassification.

In order to help users monitor economic activity from a global point of view, industrial aggregates in addition to the "division" level have been defined. There are 12 such aggregates including goods producing industries, services producing industries, industrial production and others. They are identified in Appendix I with an industry code prefixed by a "T".

## 5. Dissemination Vehicles

### 5.1 The *Daily/CANSIM*

As with many Statistics Canada series, the monthly estimates of GDP are officially released to the public simultaneously through the Statistics Canada *Daily Bulletin* and CANSIM (Statistics Canada's machine-readable database). The CANSIM database is available on Internet at the following address: [www.statcan.ca](http://www.statcan.ca). The estimates are published approximately 60 days after the end of the reference month. The data are also released in a publication, Catalogue no.15-001-XIE *Gross Domestic Product by Industry*, about a week after the release date. Data can also be obtained directly from the division on diskette, print-out or other.

<u>Reference month</u>	<u>Release dates</u>
August 2000	October 31, 2000
<b>September 2000</b>	<b>November 30, 2000*</b>
October 2000	December 22, 2000
November 2000	January 31, 2001
<b>December 2000</b>	<b>February 28, 2001*</b>
January 2001	March 30, 2001
February 2001	April 30, 2001
<b>March 2001</b>	<b>May 31, 2001*</b>
April 2001	June 29, 2001
May 2001	July 31, 2001
<b>June 2001</b>	<b>August 31, 2001*</b>
July 2001	September 28, 2001
August 2001	October 31, 2001
<b>September 2001</b>	<b>November 30, 2001*</b>
October 2001	December 24, 2001
November 2001	January 31, 2002
<b>December 2001</b>	<b>February 28, 2002*</b>

\* The quarterly income and expenditure-based GDP at market price will also be released on these dates. Release dates for the upcoming year are published, along with those for other major economic indicators, in December.

The data on CANSIM appear in greater industrial detail than in the *Daily* and are also in both seasonally adjusted and in seasonally unadjusted form. They are available historically from January 1961, and may be retrieved from the following matrices (see Appendix III):

#### Data and Matrix Numbers

Annual	4677
Quarterly, seasonally adjusted	4678
Quarterly, without seasonal adjustment	4679
Monthly, seasonally adjusted	4680
Monthly, without seasonal adjustment	4681

Information can also be obtained by calling any Statistics Canada regional office or Industry Measures and Analysis Division (1-800-877-IMAD).

#### **5.2 Publications**

The monthly, quarterly and annual constant price estimates of Gross Domestic Product by industry are published in *Gross Domestic Product by Industry*, Statistics Canada, Catalogue no. 15-001-XIE, available approximately five working days after the data have been released. This publication contains seasonally adjusted data extending back to 1992, the current base year.

For the period 1961 to 1992, the historical monthly, quarterly and annual values in 1992 prices are published in *Gross Domestic Product by Industry* (1992=100), 1961-1992, Catalogue no. 15-512-XPB (September 1998).

Code	Industry names	Indicator	Methods and data sources
E327	Shipbuilding and repair industry	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
E328	Boatbuilding and repair industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E329	Other transportation equipment industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E331	Small electrical appliance industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E332	Major appliance industry (electric and non-electric)	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E333	Electric lighting industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E334	Record player, radio and television receiver industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3351	Telecommunication equipment industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3352	Electronic parts and components industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3359	Other communication and electronic equipment industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E336	Office, store and business machine industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E337	Electrical industrial equipment industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E338	Communications, energy wire and cable industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.

## Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices

Code	Industry names	Indicator	Methods and data sources
E3391	Battery industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3393	Miscellaneous electrical products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E351	Clay products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E352	Hydraulic cement industry	Gross output	Physical quantities multiplied by base year prices. Manufacturing, Construction and Energy Division, Catalogue 44-001-XIB.
E354	Concrete products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E355	Ready-mix concrete industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E356	Glass and glass products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E357	Abrasives industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E358	Lime industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E359	Other non-metallic mineral products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E36	Refined petroleum and coal products industries	Gross output	Physical quantities multiplied by base year prices. Manufacturing, Construction and Energy Division, Catalogue 45-004-XPB.
E3711	Industrial inorganic chemical industries, not elsewhere classified	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3712	Industrial organic chemical industries, not elsewhere classified	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.

## Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices

Code	Industry names	Indicator	Methods and data sources
E372	Agricultural chemical industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E373	Plastic and synthetic resin industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E374	Pharmaceutical and medicine industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E375	Paint and varnish industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E376	Soap and cleaning compounds industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E377	Toilet preparations industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E379	Other chemical products industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3911	Indicating recording and controlling instruments industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3915	Other scientific and professional equipment industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E392	Jewellery and precious metal industries	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3931	Sporting goods industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3932	Toys and games industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.

## Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices

Code	Industry names	Indicator	Methods and data sources
E397	Sign and display industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3993	Floor tile, linoleum and coated fabric industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3994	Musical instrument and sound recording industry	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
E3995	Miscellaneous manufactured products industries, not elsewhere classified	Gross output	Shipments and inventory change in constant prices. Monthly Survey of Manufacturing, Manufacturing, Construction and Energy Division, Catalogue 31-001-XPB. Industry product prices, Prices Division, Catalogue 62-011-XPB.
F400B	Residential construction	Gross output	Estimates of work-put-in-place in constant prices, by type of dwellings. Investment and Capital Stock Division. Investment spending, National Accounts and Environment Division.
F400C	Non-residential building construction	Gross output	Estimates of work-put-in-place in constant prices, by type of buildings. Investment and Capital Stock Division. Investment spending, National Accounts and Environment Division.
F400J	Other construction	Employment Gross output	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB. Investment spending, National Accounts and Environment Division.
G45A	Air transport and related service industries	Gross output	Volume of passenger-kilometres and goods tons-kilometres multiplied by base year prices. Transportation Division, Catalogue 51-002-XPB.
G453	Railway transport and related service industries	Gross output	Physical quantities for freight multiplied by base year prices and average-haul. Passenger revenues in constant prices. Transportation Division, Catalogue 54-004-XPB, 54-005-XPB. Prices Division (CPI), Catalogue 62-001-XPB.
G45B	Water transportation and related services industries	Gross output	Physical quantities loaded and unloaded and number of persons and vehicles carried by ferry multiplied by base year prices. Transportation Division.
G456	Truck transport industries	Other	Shipments and real output in constant prices relying heavily on trucking services to transport their goods. Shipments and gross output aggregations of selected industries, Industry Measures and Analysis Division.
G4571	Urban transit system industry	Gross output	Gross revenues in constant prices. Transportation Division. Prices Division (CPI), Catalogue 62-001-XPB.
G4572	Interurban and rural transit systems industry	Gross output	Gross revenues in constant prices. Transportation Division. Prices Division (CPI), Catalogue 62-001-XPB.
G4576	School and other bus operations industries	Other	Interpolation and extrapolation of annual levels.
G45E	Other transportation and service incidental to transportation	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB. Public Institutions Division.
G4611	Natural gas pipeline transport industry	Gross output	Volume of cubic-metres of natural gas transported multiplied by base year prices. Industry Division, Catalogue 55-002-XIB.

## Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices

Code	Industry names	Indicator	Methods and data sources
G4613	Crude oil and other pipeline transport industries	Gross output	Volume of cubic-metres of crude oil transported multiplied by base year prices. Industry Division, Catalogue 55-001-XPB.
G471	Grain elevator industry	Gross output	Physical quantities multiplied by base year. Canadian Grain Commission.
G479	Other storage and warehousing industries	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
H4814	Cable television industry	Gross output	Number of subscribers by type of services. Mediastats Inc.
H4815	Radio and television broadcasting industries	Gross output	Radio advertising sales in constant prices. Television revenues in constant prices. Pay TV. Subscribers multiplied by base year prices. Mediastats inc., radio Bureau of Broadcast Measurement, Television Bureau of Canada. Canadian Advertising Rates and Data.
H484	Postal and courier service industries	Gross output Employment	Gross revenues in constant prices. Canada Post. Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
H485	Telecommunication carriers and other industries	Gross output	Type of services multiplied by base year prices. Science and Technology Division, Catalogue 56-001-XIB, 56-002-XIB.
H491	Electric power systems industry	Gross output	Number of megawatt-hours by province multiplied by base year prices. Industry Division, Catalogue 55-002-XIB.
H492	Gas distribution systems industry	Gross output	Physical volume of natural gas sales, by type of customer, multiplied by base year prices. Industry Division, Catalogue 55-002-XIB.
H494	Water systems and other utility industries, not elsewhere classified	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
I	Wholesale trade industries	Gross output	Sales in constant prices, by trade groups. Distributive Trade Division, Catalogue 63-008-XPB. Prices Division, Catalogue 62-001-XPB, and 62-011-XPB.
J	Retail trade industries	Gross output	Sales in constant prices, by trade groups. National Accounts and Environment Division, Distributive Trade Division, Catalogue 63-005-XPB. Prices Division, Catalogue 62-001-XPB, and 62-011-XPB.
K70A	Bank service and other deposit accepting intermediary industries	Gross output	Revenues derived from assets and liabilities, stock market volume and mutual funds asset and sales, expressed in constant prices. Industrial Organization and Finance Division, Prices Division, Bank of Canada, The Investment Fund Institute of Canada, stock exchanges.
K705	Credit unions	Gross output	Revenues derived from assets and liabilities, expressed in constant prices. Bank of Canada, Industrial Organization and Finance Division, Prices Division.
K71A	Other financial intermediary industries	Gross output	Revenues derived from assets and liabilities, expressed in constant prices. Industrial Organization and Finance Division, Prices Division, Bank of Canada, The Investment Fund Institute of Canada, Investment Dealers of Canada, stock exchanges.
K73	Insurance industries	Gross output	Sales of insurance policies and revenues derived from investment expressed in constant prices. Industrial Organization and Finance Division, Prices Division, LIMRA International, Bank of Canada.
L75A	Real estate operators industry	Gross output	Cash rent paid and stock of capital (building). National Accounts and Environment Division, Investment and Capital Stock Division.

**Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices**

Code	Industry names	Indicator	Methods and data sources
L75B	Owner occupied dwellings	Other	Stock estimates in constant prices for the housing sector. Investment and Capital Stock Division.
L76	Insurance and real estate agent industries	Gross output	Revenues derived from housing resales and insurance premiums. Canadian Real Estate Association, output of insurance industry.
M77A	Miscellaneous business services industries	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
M772	Computer and related services	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
M77B	Accounting and legal services industries	Employment Gross output	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB. Various related indicators for legal services. Canadian Centre for Justice Statistics, Consumer and Corporate Affairs Canada, Canadian Real Estate Association, Canada Mortgage and Housing Corporation, Health Division.
M774	Advertising services	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
M775	Architectural, engineering, and other scientific and technical services	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
N811	Defence services	Employment	Number of civilian and military personnel. Department of National Defence.
N819	Other federal government service industries	Employment	Number of employees. Public Institutions Division, Catalogue 72-004-XPB.
N82	Provincial and territorial government service industries	Employment	Number of employees. Public Institutions Division, Catalogue 72-004-XPB.
N83	Local government service industries	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
O853	University education	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
O856	Other educational service industries	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
P861	Hospitals	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
P86A	Other health and social service industries	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
Q91	Accommodation service industries	Gross output	Number of hotel and motel rooms adjusted for vacancy rate, by major cities, multiplied by base year prices. Price Waterhouse and Smith Travel Research. Prices Division (CPI), Catalogue 62-001-XPB.
Q92	Food and beverage service industries	Gross output	Sales in constant prices. Services Division, Catalogue 62-007-XPB. Prices Division (CPI), Catalogue 62-001-XPB.
R961	Motion picture, audio and video production and distribution	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
R962	Motion picture exhibition	Employment	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB.
R966	Lotteries, bingos, casinos, et cetera	Gross output	Sales by Lottery Corporations. Provincial Lottery Corporations. Prices Division (CPI), Catalogue 62-001-XPB.
R967	Other amusement and recreational services industries	Employment Other	Number of employees. Labour Division (SEPH), Catalogue 72-002-XPB. Sporting event attendances (various sources). Interpolation and extrapolation of annual levels for one industry.

**Appendix IIb - Methods and Data Sources of Monthly GDP at Factor Cost by Industry, at 1992 Prices**

Code	Industry names	Indicator	Methods and data sources

\* Data not available after 1994.

\*\* For some of the lowest levels of aggregation, it is not possible to have an homogeneous series from 1961 to the present. For that reason, special industry groupings that provide relatively good continuity were created back to 1961.

## Appendix IV - A Note on Data Revisions for the Period 1994 to 2000

### Introduction

With the release of the July 2000 data, the monthly estimates of GDP by industry were revised for the current year and for the preceding six years. Revisions to 1994 and 1995 were intra-annual only, producing no change in the annual levels. Revisions for 1996 and subsequent years incorporate new annual information compiled by the Input-Output Division. The annual data presented in the Input-Output tables reflects a careful synthesis and reconciliation of both survey and census data from many different sources. It is often referred to as 'benchmark' data.

A comprehensive review of the annual relationships between benchmarks and projectors was also undertaken. The results of this review were incorporated in the projections of the annual levels of GDP in 1998 and the following years for industries where a significant relationship was found. The monthly estimates of GDP were step-adjusted so they would sum to these projected annual levels between 1998 and 1999 and to the benchmarks for 1994 to 1997. Subject to the annual adding up constraints, the step-adjustment process also minimised revisions to previously published month-to-month movements in GDP.

### Revisions to Gross Domestic Product by Industry

The following tables provide a summary of revisions to a few special aggregates. Since the major reason for the revisions is to incorporate new annual information, we start by describing the revisions to annual levels and to annual growth rates. This provides a background within which revisions to the quarterly estimates can be discussed.

The revisions to total GDP are shown in the left part of Text Table 1. The total GDP level was virtually unchanged in 1995 and 1996. In 1997 the GDP level was revised down by 0.1%. However in 1998 and 1999 the GDP level was revised upwards by 0.1 and 0.3 respectively. One of the largest contributors to this upward revision was in the group of service producing industries.

Revisions to the annual growth rates are also shown in Text Table 1. The table shows that in 1995 and 1996 the growth rates of the total GDP were unchanged. The growth rate was revised down in 1997 by 0.1%. However, in 1998 and 1999 the growth rates were revised upwards 0.2%. These upward revisions were mainly due to the business sector of the service industries.
