### Revisions

With this release of monthly GDP by industry, revisions have been made back to January 2004.

### Important notice

With the September 2005 release (July reference month), the monthly gross domestic product (GDP) by industry program will convert to the 2002 North American Industrial Classification System (NAICS) from NAICS 1997. We are also planning to change the industry detail published. The goal is to reduce the number of industries whose contribution to total economic activity is less relevant, and to increase the detail provided for those that have become more important, such as some of the service industries. With these changes, the monthly GDP program will better reflect the current structure of the Canadian economy.

More detailed information on these planned changes will appear soon in the Integrated Metadatabase. Follow the link about *Gross Domestic Product by Industry – Monthly* on the following web page <http://www.statcan.ca/english/sdds/indexa.htm>.

### Note to users

In September 2002 (Reference Month: July 2002), the monthly Gross Domestic Product (GDP) by industry program introduced the first stage of a conversion to a Chain Fisher formula, by adopting annually chained Fisher Input-Output benchmarks in its calculation of real GDP for 1997 to 2001. However, beginning with January 2002 onwards, the monthly estimates are derived by chaining a Laspeyres volume index at 2001 prices to the prior period. The monthly GDP data are expressed in chained dollars with 1997 as reference year. This conversion brings the monthly GDP by industry estimates more in line with the quarterly expenditure-based GDP data, chained quarterly. For more information, see the *Chain Fisher Volume Index* page on our website

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

# Highlights

## April 2005

Economic activity bounced back 0.4% in April after declining 0.1% in March, boosted by a rebound in oil extraction, strike recovery in education and higher retail sales. A partial resumption of activity in the tar sands after first quarter production difficulties propelled oil extraction. The end of post-secondary student strikes in Quebec restored education services, while retail sales gained on the strength of new car sales.

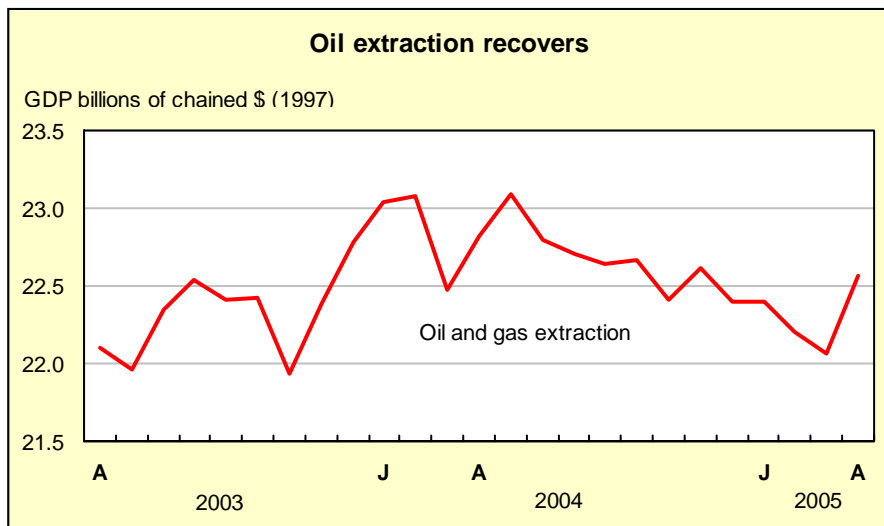

Industrial production (the output of factories, mines and utilities) advanced 0.7% in April. Manufacturers' output increased by 0.3% as wood products manufacturing recovered from a March decline. Mining and oil and gas extraction gained 2.4% mostly due to oil extraction in the tar sands. Output of utilities decreased 0.3% as natural gas distribution dropped by 9.0% due to a warmer than usual April in most parts of Canada and the northern United States. The U.S. index of industrial production declined 0.3% due to decreases in manufacturing and utilities, while the mining sector edged up.

### Oil extraction resumes while mild weather reduces the demand for natural gas

Output in the mining and oil and gas extraction sector increased 2.4% in April mostly due to a partial resumption of oil extraction in the tar sands area after a series of problems hampered production in the first quarter of 2005. The jump in crude petroleum production resulted in a 3.9% increase in the pipeline transportation of crude oil and other products. Oil and gas extraction jumped only 2.2% as natural gas extraction dipped slightly.

Milder than usual weather in April in most parts of the country and in the northern United States lowered the demand for natural gas and reduced the output of related activities, such as distribution (-9.0%) and pipeline transportation (-5.0%). The energy sector increased by 0.9% despite the general decrease in natural gas related activities. Output of the energy sector excluding these activities increased 2.6%.

Mining activity increased 3.7% on the strength of higher output by copper, nickel, lead and zinc ore mines (+9.5%) as other zinc mines replaced those that closed permanently in previous months. A strike brought iron ore mining down 17%. This industry also suffered from strike activity in 2004. The output of non-metallic mineral mines increased 5.7% in April.

### Automotive sales boost retailing and wholesaling activities

Retailing activity gained 1.4% in April boosted by new car sales. Activity in retail stores excluding new car dealerships was a robust 0.7%, with increases for most store types. The largest gains were in home centres and hardware stores, clothing stores, and furniture, home furnishings and electronics stores. The largest decreases were recorded in supermarkets and gas stations.

Wholesaling activity increased 0.3% bolstered by sales of motor vehicle products, building products and miscellaneous products. Most wholesale trade groups however saw decreased activity in April, especially machinery and electronic equipment. Excluding motor vehicle products, wholesale trade fell 0.4%.

### Manufacturing regains some lost ground

Manufacturing output increased 0.3% in April regaining some of the ground lost in February and March. Thirteen of the 21 major groups accounting for 58% of manufacturing output advanced. Wood products rose 4.9% pushed by a rebound in the output of sawmills after unfavourable weather and strike activity hampered West Coast production in March.

The manufacturing of machinery edged up 0.1% restrained by a sharp decrease in general-purpose machinery (-5.7%). Excluding this industry, output of machinery increased 1.9%. There were widespread decreases in the manufacturing of chemicals (-1.2%), clothing (-6.2%), and paper products (-1.2%).

Motor vehicle manufacturing declined a further 2.6% while parts production increased 2.4%. Other notable increases were reported by manufacturers of aluminum (+3.8%), cement and concrete (+3.9%) and of meat products (+2.9%).

**Residential construction continues to slide**

Residential construction was down a further 0.9% in April marking a fourth consecutive monthly decline. Since the beginning of the year, residential construction activity has decreased 3.3%. In April, a decrease in the construction of single-detached dwellings more than offset an increase in multi-units structures. Nonetheless, housing starts increased in all urban areas except British Columbia, while the stock of newly completed but unoccupied apartments and row units continued to swell.

Non-residential building construction dipped by 0.1% in April. An increase in the construction of commercial structures was more than offset by decreases in industrial and institutional structures. The value of building permits issued however declined for commercial and institutional structures in April, while the value of industrial permits increased for the third month in a row.

**Other industries**

Educational services shot back up 1.6% after the end of strikes by post-secondary students in Quebec. The rebound in economic activity in April resulted in an increase of 1.0% in truck transportation.
