## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

## Highlights

---

Real Gross Domestic Product declined 0.7% in January following decreases of 1.0% and 0.7% in December and November 2008 respectively.

### Note to readers

The monthly gross domestic product (GDP) by industry data are chained volume estimates with 2002 as their reference year. This means that the estimates for each industry and aggregate are obtained from a chained volume index multiplied by the industry's value added in 2002. For the 1997 to 2005 period, the monthly estimates are benchmarked to annually chained Fisher volume indexes of GDP obtained from the constant-price input-output tables.

For the period starting with January 2006, the estimates are derived by chaining a fixed-weight Laspeyres volume index to the prior period. The fixed weights are the industry output and input prices of 2005. This makes the monthly GDP by industry estimates more comparable with the expenditure-based GDP data, chained quarterly.

### Revisions

With this release of monthly GDP by industry, revisions have been made back to January 2008. For more information about monthly GDP by industry, see the National economic accounts module on our website ([www.statcan.gc.ca/nea-cen/index-eng.htm](http://www.statcan.gc.ca/nea-cen/index-eng.htm)).

## Analysis

---

Real Gross Domestic Product declined 0.7% in January following decreases of 1.0% and 0.7% in December and November 2008 respectively.

The output of manufacturing, especially of motor vehicle and associated parts industries, along with wholesale trade and construction were the main contributors to the January drop. The finance and insurance sector, transportation, mining (excluding oil and gas extraction), and accommodation and food services, also retreated. Economic activity increased in retail trade, oil and gas extraction and the public sector.

**Chart 1**  
**Economic activity declines further**

GDP in billions of chained (2002) dollars

### Manufacturing activity decreases

Activity in the manufacturing sector decreased for a sixth consecutive month in January (-3.1%). Export-oriented sub-sectors were particularly hit as the volume of merchandise exports decreased 7.0% in January. While 18 of the 21 major manufacturing groups lost ground, about half of the decline was attributable to a 27% reduction in motor vehicle and associated parts production.

Motor vehicle manufacturers sharply curtailed their output in January in reaction to lower demand in the U.S. This brought the level of production of the Canadian motor vehicle and parts industries to about 40% of the peak recorded in the first quarter of 2007.

Manufacturing industries related to construction activities continued to be affected by the decline in that sector in both Canada and the U.S. In addition, the reduced demand for newsprint led to temporary closures of newsprint mills. Computer and electronic product manufacturing also dropped.

**Chart 2**  
**Motor vehicle manufacturing drops**

### Wholesale trade falls

The volume of wholesaling activity continued to fall in January (-3.4%). The main declines were in the wholesaling of automotive products, building materials, and machinery and electronic equipment. Conversely, the wholesaling of food products and of other products (which include agricultural, chemical, recycled material and paper products) increased.

### Construction down

Construction activity was down 3.0% in January. Residential and non-residential building construction as well as engineering and repair work decreased. There was a sharp decline in residential building construction (-6.4%), particularly in the construction of new dwellings. Commercial and industrial building construction also contracted while that of institutional buildings edged up.

The output of real estate agents and brokers continued to decline in January (-2.6%) as housing sales decreased again. This also affected professional services associated with housing sales, particularly legal services.

### The finance and insurance sector retreats

The finance and insurance sector retreated 0.7% in January in light of the reduced level of activity in banking services, stock brokerages and mutual fund sales. In particular, banking activities related to residential mortgages and short term business loans declined. However, activities in short term personal loans and fixed term deposits recorded a modest increase.

## Retail trade increases

Value added in retail trade increased 1.4% in January, following three monthly declines. The volume of activities at new car dealers rebounded in January from its December decline, but remained below its fourth quarter 2008 level. Some motor vehicle manufacturers have introduced incentives programs to bolster sales.

Excluding new car dealers, retail trade increased 0.5%. Advances posted by supermarkets and beer, wine and liquor stores, helped the sector move forward. These gains were partially offset by the decrease registered by gasoline stations and home centres and hardware stores.

## Energy sector output essentially unchanged

The output of the energy sector was essentially unchanged in January. An increase in oil and gas extraction, particularly of natural gas, and in the transportation of natural gas, eclipsed the slip in electricity generation and the significant contraction in support activities for mining and oil and gas extraction.

The storage of natural gas fell significantly in both Canada and the United States, while exports of natural gas to the United States advanced.

The output of the mining sector excluding oil and gas extraction decreased 0.9% in January. The fall in non-metal mines, mostly in potash production, outweighed the rise in metal ore mines.

**Note(s):** Education, health and public administration.

## Other industries

The weakness observed in manufacturing and wholesale trade continued to hamper transportation services, such as trucking and rail. Activities in urban transit transportation fell, largely because of a labour dispute in Ontario. Both accommodation and food services retreated, paralleling a significant reduction in the number of overnight visitors to Canada.
