## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

# Highlights

---

Real gross domestic product increased 0.3% in February mainly on the strength of manufacturing.

## Note to readers

The monthly gross domestic product (GDP) by industry data at basic prices are chained volume estimates with 2002 as their reference year. This means that the data for each industry and aggregate are obtained from a chained volume index multiplied by the industry's value added in 2002. For the 1997 to 2006 period, the monthly data are benchmarked to annually chained Fisher volume indexes of GDP obtained from the constant-price input-output tables.

For the period starting with January 2007, the data are derived by chaining a fixed-weight Laspeyres volume index to the prior period. The fixed weights are the industry output and input prices of 2006. This makes the monthly GDP by industry data more comparable with the expenditure-based GDP data, chained quarterly.

## Revisions

With this release of monthly GDP by industry, revisions have been made back to January 2009. For more information about monthly GDP by industry, see the National Economic Accounts module on our website ([www.statcan.gc.ca/nea-cen/index-eng.htm](http://www.statcan.gc.ca/nea-cen/index-eng.htm)).

# Analysis

---

Real gross domestic product increased 0.3% in February mainly on the strength of manufacturing. The mining sector, with the exception of oil and gas extraction, also contributed to the growth in February. In addition, some industries benefited from the Olympic Winter Games held in Vancouver, such as performing and spectator sports, accommodation services, as well as radio and television broadcasting. Retail trade also advanced while wholesale trade and oil and gas extraction declined.

**Chart 1**  
**Real gross domestic product increases in February**

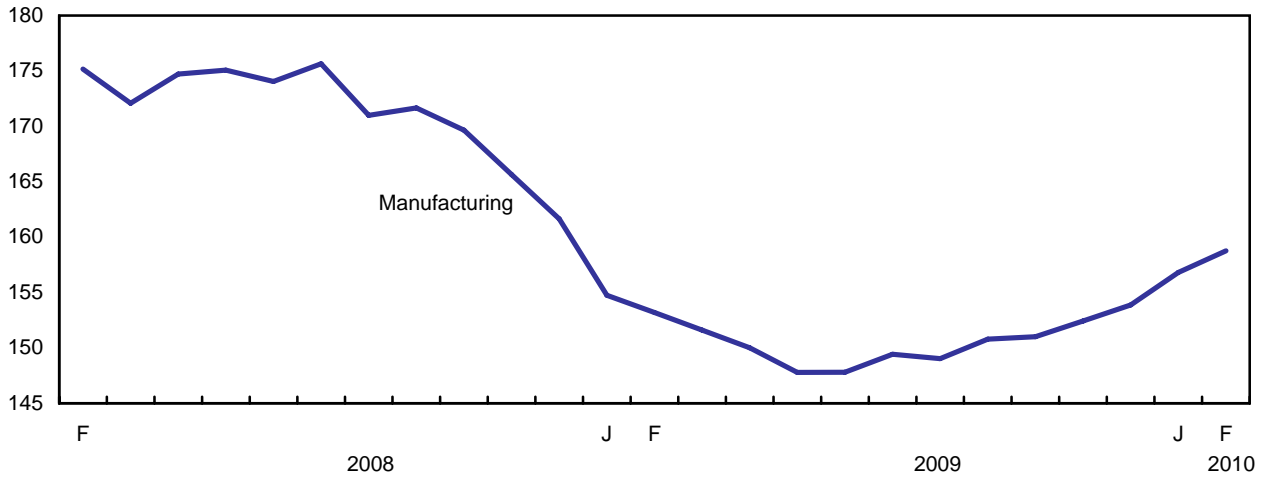

## Manufacturing rises again

The output of the manufacturing sector grew 1.2% in February, with 14 of 21 major groups advancing. This increase accounted for nearly half of the overall growth in gross domestic product.

Durable goods manufacturing increased 1.4% led by fabricated metal products, non-metallic mineral products, as well as computer and electronic products. Manufacturers of non-durable goods increased their production 1.1%, notably of pharmaceuticals and beverages. The manufacturing of transportation equipment and of petroleum and coal products was down.

**Chart 2**  
**Manufacturing increases for a sixth consecutive month**

GDP in billions of chained (2002) dollars

**With the exception of oil and gas extraction, the mining sector increases**

Overall, the mining sector increased 0.4% in February. Excluding oil and gas extraction, the sector grew 7.6% however. Support activities for mining and oil and gas extraction rose 12%, returning to the levels reached in the second half of 2008. As well, the output of potash mines and, to a lesser extent, of copper, nickel and coal mines increased. Conversely, oil and gas extraction decreased 1.8% with both oil and natural gas output declining. Two successive fires at some oil extraction facilities have led to reduced levels of production since December.

**Wholesale trade falls**

The volume of wholesaling activity declined 1.4% in February after five consecutive monthly increases. All major wholesale trade groups fell, with the exceptions of buildings materials, petroleum products and other products (which include fertilizers).

**Retail trade continues to advance**

Value added in retail trade was up 0.6%. There were notable increases at clothing stores, beer, wine and liquor stores, new car dealers, and gasoline stations. However, building and outdoor home supplies stores as well as home furnishings stores recorded significant declines.

**Construction edges up**

Construction edged up 0.1% as residential building construction grew 2.2%, while engineering and repair works as well as non-residential building construction declined.

**Chart 3**  
**Main industrial sectors' contribution to the percent change in gross domestic product - February 2010**

1. Education, health and public administration.  
 2. Includes industries such as spectator sports and accommodation services.

**The finance and insurance sector declines slightly**

The finance and insurance sector declined 0.2% as the decrease in the volume of trading on the stock exchanges and in the activities of the insurance industries outweighed the increase in banking activities.
