The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

Charts

1. Real gross domestic product continues to expand in January 7
2. The manufacturing sector increases 8
3. Main industrial sectors' contribution to the percent change in gross domestic product - January 2011 9

Highlights

Real gross domestic product continued to expand in January, rising 0.5%, the same pace as in December. Growth was driven by manufacturing and, to a lesser extent, by transportation and wholesale trade.

Note to readers

The monthly gross domestic product (GDP) by industry data at basic prices are chained volume estimates with 2002 as their reference year. This means that the data for each industry and aggregate are obtained from a chained volume index multiplied by the industry's value added in 2002. For the 1997 to 2007 period, the monthly data are benchmarked to annually chained Fisher volume indexes of GDP obtained from the constant-price input-output tables.

For the period starting with January 2008, the data are derived by chaining a fixed-weight Laspeyres volume index to the prior period. The fixed weights are the industry output and input prices of 2007. This makes the monthly GDP by industry data more comparable with the expenditure-based GDP data, chained quarterly.

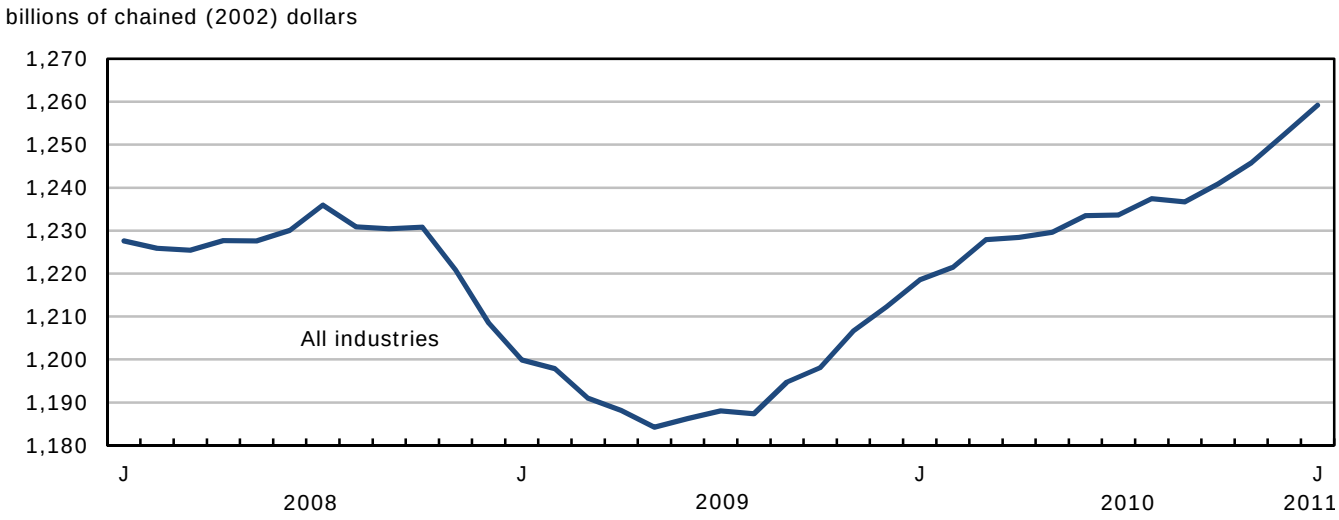
Revisions

With this release of monthly GDP by industry, revisions have been made back to January 2010. For more information about monthly GDP by industry, see the National Economic Accounts module on our website (*www.statcan.gc.ca/nea-cen/index-eng.htm*).

Analysis

Real gross domestic product continued to expand in January, rising 0.5%, the same pace as in December. Growth was driven by manufacturing and, to a lesser extent, by transportation and wholesale trade. The finance and insurance sector, construction and real estate also increased. Mining and oil and gas extraction as well as retail trade decreased.

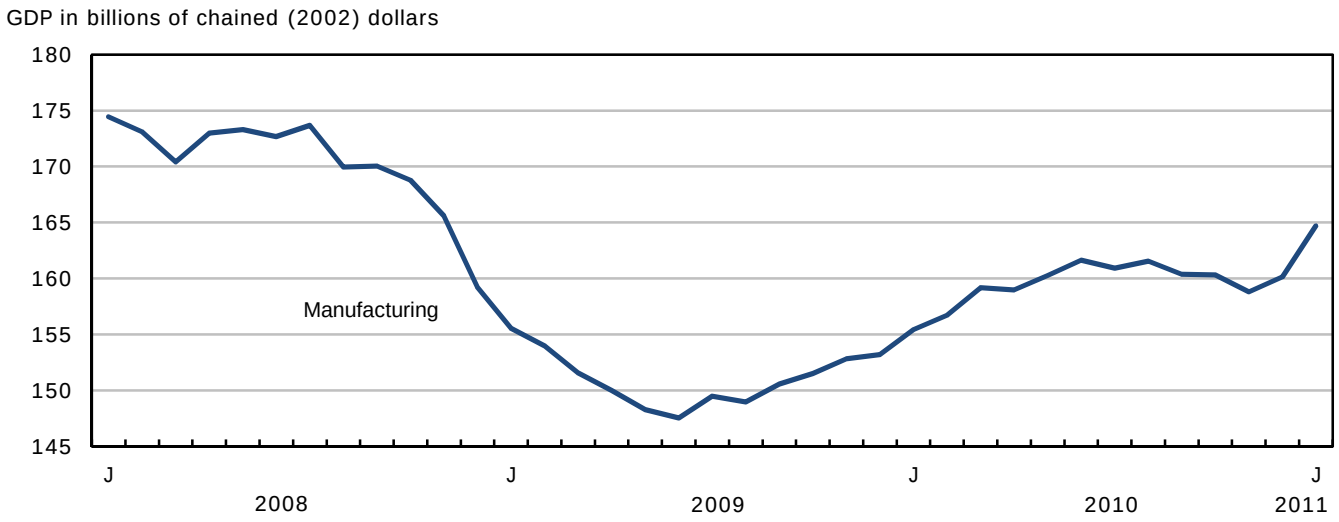
Chart 1
Real gross domestic product continues to expand in January



Manufacturing increases

Manufacturing grew 2.8% in January following a 0.8% gain in December. Although growth was broadly based in both durable and non-durable goods, manufacturers of fabricated metal products and of motor vehicles and associated parts recorded the largest increases.

Chart 2
The manufacturing sector increases



The January rise in motor vehicles and parts production was partly a recovery from temporary factors: shutdowns for retooling in November 2010 and unfavourable weather that hampered production in December. Other industries that contributed to January's rise in manufacturing were food, beverage and tobacco, and machinery. Output at refineries decreased.

Transportation and warehousing sector up

The transportation and warehousing sector advanced 1.2%. Higher iron ore output in January helped to boost rail transportation (+5.0%). Truck transportation (+1.1%) benefitted from increased activity in manufacturing and wholesale trade. There was also a marked increase in pipeline transportation of natural gas, mirroring the growth in exports of that commodity.

Wholesale trade grows

Wholesale trade (+0.7%) increased for a fourth consecutive month. Wholesalers of motor vehicles and parts and of building materials recorded significant increases. In contrast, wholesaling of petroleum products declined.

Retail trade edged down 0.1% in January. Gains in general merchandise stores (which includes department stores) and in food and beverage stores were more than offset by lower activity at gasoline stations, new car dealerships and furniture stores.

Upward movement in finance and insurance

The finance and insurance sector grew 0.6% due to higher volume of trading on the stock exchanges and increased financial intermediation (personal and business loans, mortgages and mutual fund sales).

Construction rebounds

Construction activity rose 0.4% with increases in all components (residential and non residential buildings as well as engineering and repair work). Activity in the home resale market continued to advance, resulting in a 2.6% increase in the output of real estate agents and brokers.

Mining and oil and gas extraction declines

Mining and oil and gas extraction retreated 0.5% in January. The decline was partly attributable to difficulties affecting synthetic oil production. In contrast, natural gas extraction continued to grow. Support activities for mining, oil and gas extraction also declined mainly as a result of reduced drilling activity.
