The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

Annual averages of seasonally adjusted data are identical to annual levels except for minor variations which are due to rounding.

Charts

1. Real gross domestic product increases in July 7
2. Manufacturing output rises after three monthly declines 8
3. Main industrial sectors' contribution to the percent change in gross domestic product - July 2011 9

Highlights

Real gross domestic product rose 0.3% in July following a 0.2% increase in June. Manufacturing and, to a lesser extent, wholesale trade and transportation services were the main sources of growth.

Note to readers

The monthly gross domestic product (GDP) by industry data at basic prices are chained volume estimates with 2002 as the reference year. This means that the data for each industry and each aggregate are obtained from a chained volume index multiplied by the industry's value added in 2002. For the 1997 to 2008 period, the monthly data are benchmarked to annually chained Fisher volume indexes of GDP obtained from the constant-price input-output tables.

For the period starting with January 2009, the data are derived by chaining a fixed-weight Laspeyres volume index to the prior period. The fixed weights are 2008 industry prices.

This approach makes the monthly GDP by industry data more comparable with the expenditure-based GDP data, chained quarterly.

Revisions

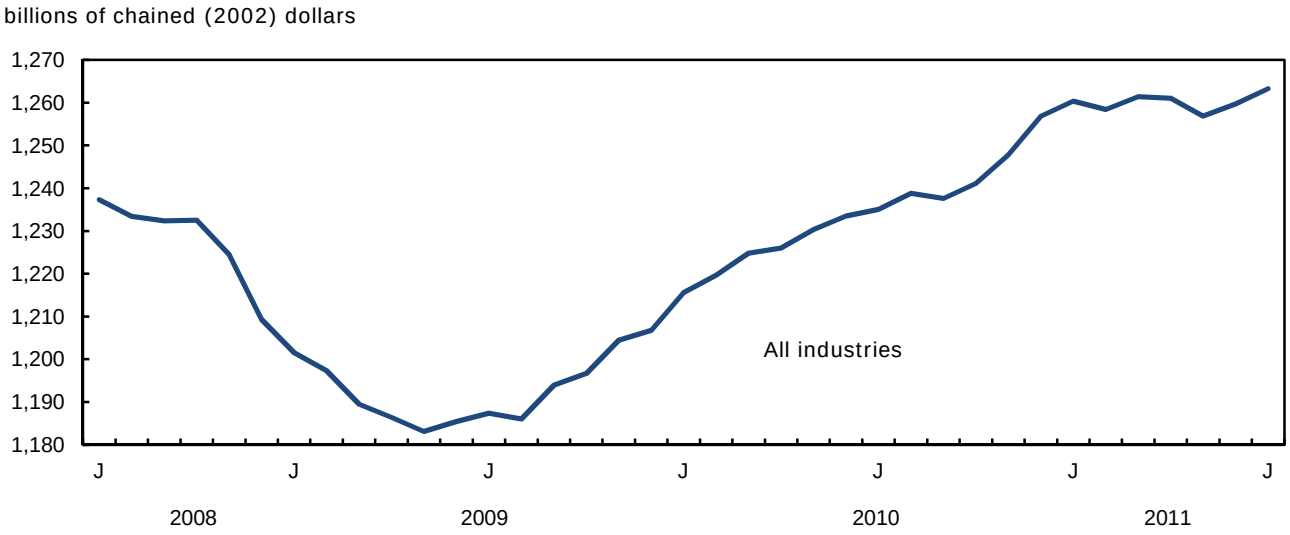
With this release of monthly GDP by industry, the data incorporate the new 2008 input-output annual benchmarks, revised source data, improved methodologies and revised seasonal adjustment factors. As a result, the monthly series have been revised back to January 2007.

For more information about monthly GDP by industry, see the National economic accounts module on our website (*www.statcan.gc.ca/nea-cen/index-eng.htm*).

Analysis

Real gross domestic product rose 0.3% in July following a 0.2% increase in June. Manufacturing and, to a lesser extent, wholesale trade and transportation services were the main sources of growth. Increases in utilities and the public sector (public administration, education and health services) were also recorded. Retail trade, mining and oil and gas extraction, construction and the finance and insurance sector decreased.

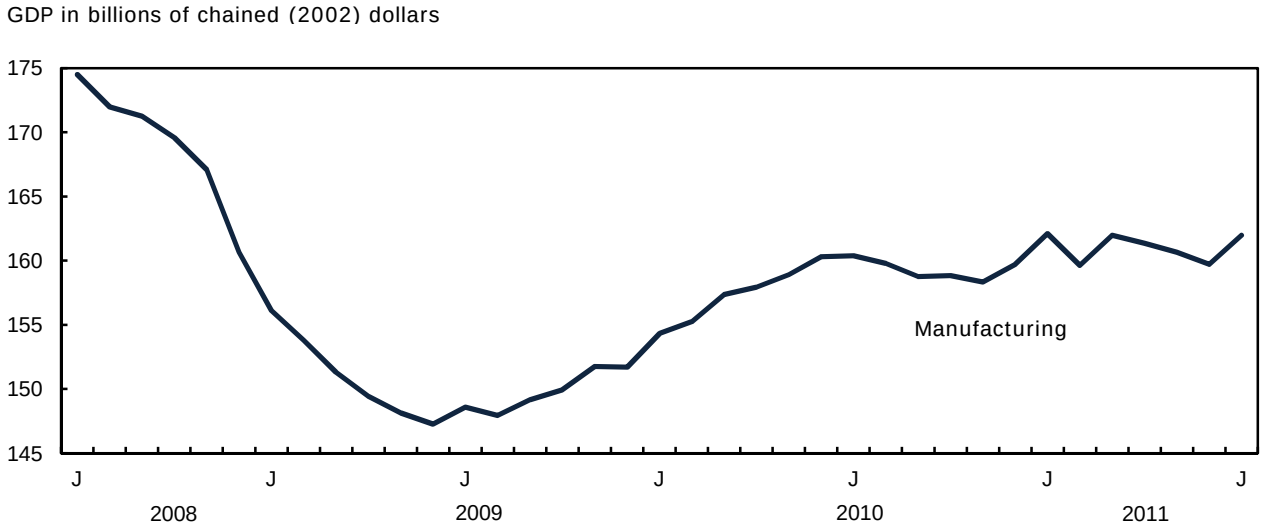
Chart 1
Real gross domestic product increases in July



Manufacturing increases

Manufacturing grew 1.4% in July following three consecutive monthly declines. Growth was broadly based, with manufacturing of both durable (+2.1%) and non-durable goods (+0.5%) increasing. Manufacturers of motor vehicles and parts, fabricated metals, machinery and chemical products posted significant gains. Manufacturing of food as well as furniture and related products was down.

Chart 2
Manufacturing output rises after three monthly declines



Transportation and warehousing services resume growth

Transportation and warehousing services grew 1.8% mainly due to a return to a more normal level of activity in postal services following labour disruptions in June. Rail, trucking and air transportation also showed growth in July.

Widespread gains in wholesale but retail declines

Wholesale trade rose 1.5% in July. Increases were registered in many of the sub-sectors, particularly in motor vehicles and parts, personal and household goods as well as machinery and equipment.

Retail trade fell 0.7%, with a significant decrease in motor vehicles and parts dealers. Excluding motor vehicle and parts dealers, retail trade was unchanged.

Utilities advance

The output of utilities increased 1.5%, as warmer than normal temperatures in most parts of the country led to an increased demand for electricity. Natural gas distribution was up partly as a result of increased industrial consumption.

Construction down

Construction declined 0.3% in July, with decreases in non-residential building construction and in engineering and repair work. Residential construction edged up 0.1% in July.

Activity in the home resale market softened in July, which led to a 1.1% decline in the output of real estate agents and brokers.

Mining and oil and gas extraction falls

Mining and oil and gas extraction fell 0.3% as the significant decline in natural gas extraction outweighed the increase in crude petroleum production. Support activities for mining and oil and gas extraction also declined as a result of reduced drilling activity.

Excluding oil and gas extraction, mining output grew 2.9%. This was largely attributable to gains in copper, nickel, lead and zinc mining following production difficulties and maintenance work in June.

Finance and insurance down

The finance and insurance sector decreased 0.3%, as both the volume of trading on the stock exchanges and the sales of mutual funds declined. Lower activity for insurance carriers was also a factor in the decline.
