## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67), are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic price as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organization for Economic Co-operation and Development, United Nations and World Bank.

1.	Real gross domestic product increases in July	7
2.	Manufacturing output rises in July	8
3.	Main industrial sectors' contribution to the percent change in gross domestic product - July 2012	9

## Highlights

---

Real gross domestic product grew 0.2% in July, after edging up 0.1% in June. Goods production increased 0.2% in July, on the strength of manufacturing and utilities, and the output of service industries rose 0.2%.

### Note to readers

The monthly gross domestic product (GDP) by industry data at basic prices are chained volume estimates with 2002 as the reference year. This means that the data for each industry and each aggregate are obtained from a chained volume index multiplied by the industry's value added in 2002. For the 1997 to 2008 period, the monthly data are benchmarked to annually chained Fisher volume indexes of GDP obtained from the constant-price input-output tables.

For the period starting with January 2009, the data are derived by chaining a fixed-weight Laspeyres volume index to the prior period. The fixed weights are 2008 industry prices.

This approach makes the monthly GDP by industry data more comparable with the expenditure-based GDP data, chained quarterly.

All data in this release are seasonally adjusted. For more information on seasonal adjustment, see *Seasonal adjustment and identifying economic trends* (<http://www.statcan.gc.ca/pub/11-010-x/2010003/part-partie3-eng.htm>).

### Revisions

With this release of monthly GDP by industry, revisions have been made back to January 2011. For more information about monthly GDP by industry, see the *National economic accounts* module on our website ([www.statcan.gc.ca/nea-cen/index-eng.htm](http://www.statcan.gc.ca/nea-cen/index-eng.htm)).

## Analysis

---

Real gross domestic product grew 0.2% in July, after edging up 0.1% in June. Goods production increased 0.2% in July, on the strength of manufacturing and utilities. In contrast, mining and oil and gas extraction as well as construction declined. The output of service industries rose 0.2% in July, mainly as a result of increases in retail and wholesale trade, the finance and insurance sector, and accommodation and food services. The public sector (education, health and public administration combined) was essentially unchanged in July.

**Chart 1**  
**Real gross domestic product increases in July**

### Manufacturing increases

Manufacturing grew 0.6% in July after declining 0.7% in June. Durable goods production expanded 0.7% in July, mainly as a result of increases in computer and electronics products, as well as non-metallic mineral, primary metal and fabricated metal products. Manufacturers of machinery recorded declines, however. Manufacturing of non-durable goods rose 0.6%, as increases in petroleum and coal products, plastics and rubber products and chemical products more than offset decreases in printing and related support activities and paper manufacturing.

**Chart 2**  
**Manufacturing output rises in July**

### Utilities advance

Utilities grew 2.0%, the fourth consecutive monthly increase, as both electricity production and natural gas distribution increased. Demand for electricity and natural gas was up due to warmer than usual weather and increased industrial activity.

### Retail as well as wholesale trade increase

Retail trade rose 0.6% in July after edging down 0.1% in June. Notable increases were recorded at motor vehicles and parts dealers, general merchandise stores, as well as health and personal care stores. In contrast, retailing activity at food and beverage stores was down.

Wholesale trade was up 0.2% in July, after declining 0.9% in June. Wholesaling of petroleum products and personal and household goods increased. Conversely, wholesaling of food, beverage and tobacco as well as machinery, equipment and supplies declined.

### Mining and oil and gas extraction declines

Mining and oil and gas extraction declined 0.3% in July. Oil and gas extraction decreased 0.2% in July as a decline in crude petroleum production outweighed an increase in natural gas extraction. Support activities for mining and oil and gas extraction also fell (-2.9%) as drilling and rigging services decreased.

Pipeline transportation of crude oil and natural gas decreased, reflecting lower exports of these commodities.

Mining excluding oil and gas extraction grew 0.3% in July as increased output at coal and metal ore mines was partly offset by decreased output at non-metallic mineral mines, in particular potash.

### Finance and insurance sector activity increases

The finance and insurance sector rose 0.5% in July, the fourth consecutive monthly gain, on increased output of banks and security brokerages.

### Construction edges down

Construction edged down 0.1% in July as declines in residential building and non-residential building construction outweighed the increase in engineering construction and repair work.

The output of real estate agents and brokers declined 1.5%, down for a third consecutive month, as activity in the home resale market decreased in July.
