How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website, www.statcan.gc.ca.

You can also contact us by

email at infostats@statcan.gc.ca

telephone, from Monday to Friday, 8:30 a.m. to 4:30 p.m., at the following toll-free numbers:

- Statistical Information Service 1-800-263-1136
- National telecommunications device for the hearing impaired 1-800-363-7629
- Fax line 1-877-287-4369

Depository Services Program

- Inquiries line 1-800-635-7943
- Fax line 1-800-565-7757

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under “About us” > “The agency” > “[Providing services to Canadians](#).”

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Standard table symbols

The following symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^P preliminary
- ^r revised
- X suppressed to meet the confidentiality requirements of the *Statistics Act*
- ^E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Canadians and nature: Environmental engagement, 2013

by Environment, Energy and Transportation Statistics Division

There are many ways citizens can become involved in the conservation and protection of the environment. They can, for example, donate money to an environmental conservation organization or volunteer to help clean up a park, or join an environmental group.

Overall engagement

Almost 1 in 5 (18%) Canadian households engaged in unpaid activities aimed at conservation or protection of the environment or wildlife. Households in Prince Edward Island were the most engaged with one-third of households reporting this, while those in Quebec were the least engaged (9%).

Household composition appears to make a difference when it comes to environmental engagement.

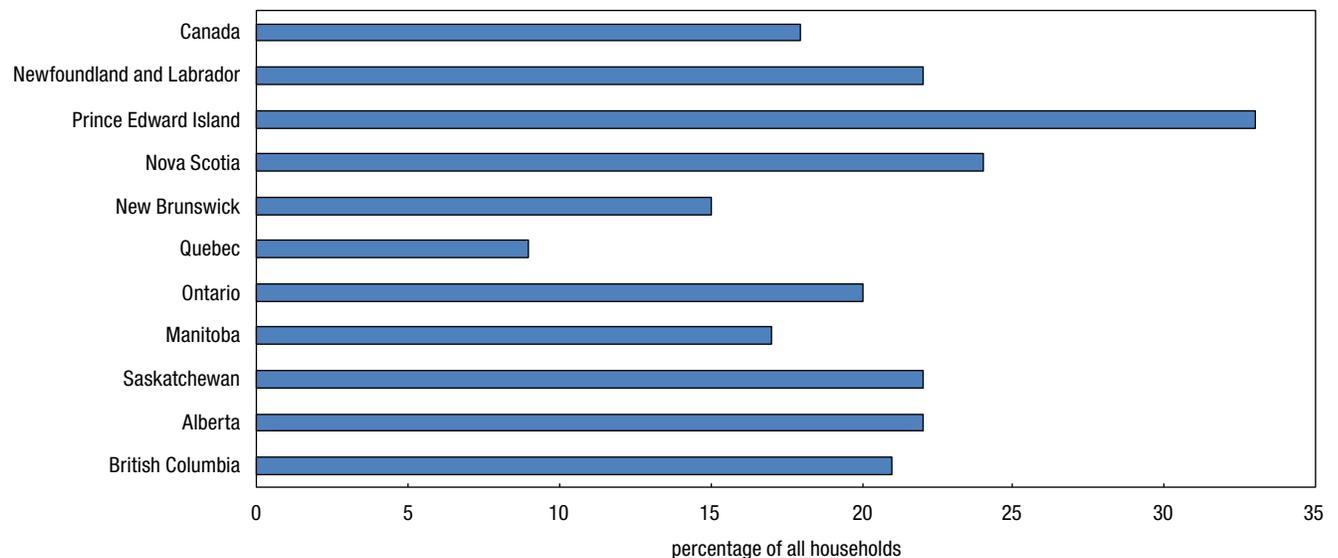

In households where there are only people between the ages of 25 and 44, 16% reported some manner of environmental engagement. Households that included children and teens, however, were more than twice as likely (36%) to have engaged in these types of activities. Seniors-only households were the least likely to have done this, with 11% reporting this type of activity.

Activities undertaken as part of a group or independently

Environmental engagement activities can be undertaken as part of an organised group or on one's own. Organized activities, can include beach or park clean-up days and unpaid help provided to schools, religious organizations, sports or community associations.

Chart 1

Households that were engaged in unpaid activities aimed at conservation or protection of the environment or wildlife, 2013

Source: Statistics Canada, CANSIM table 153-0151

More than half (54%) of the households that reported engaging in unpaid activities aimed at conservation or protection of the environment or wildlife did so on behalf of a group or organization. Most of the households in Quebec that were engaged (68%) did so as part of a group, while about 37% of the households in Manitoba did so. Households with children and teens were more likely to have participated in group activities compared to adult-only households.

Independent actions, such as picking up litter or writing letters to political officials, are other ways individuals and households may engage in environmental conservation and protection activities.

Just over two-thirds of households (68%) that reported engaging in unpaid environmental engagement activities did so independently. Households in Saskatchewan were most likely to have done this with 81% of engaged households reporting this. Engaged households in Quebec (53%) were the least likely to have engaged in independent conservation and protection activities.

Engagement in independent activities was more frequently reported by households that did not include children or teens.

Cleanups

Cleaning up shorelines, beaches, rivers, lakes and roadsides are important conservation activities undertaken by just over 4 out of 10 engaged households (41%).

Households in Prince Edward Island reporting this most frequently (67%), and households in Quebec reporting it least frequently (34%). Engaged households that included both teens and children were most likely to have participated (48%), while households with children 12 years of age and younger were least likely (35%) to have taken part in cleanup activities.

Monitoring

Monitoring and assessing wild species and natural habitats is an important part of nature conservation. Taking part in bird counts and similar activities, for example, is one way households can volunteer their time to help conserve nature. In 2013, 15% of engaged households reported they participated in this kind of activity. Households with only members between 45 and 64 years of age, and seniors-only households (65 years of age and over) were most likely to have done this (19% and 20%, respectively).

Teaching

Giving guided nature walks, chaperoning school trips to nature centres, and leading or assisting indoor courses on nature and the environment are examples of ways people can teach others about nature. Seven percent of all households in Canada reported that a member of the household volunteered their time to teach others about nature, with households in British Columbia and Manitoba most likely to have reported this (11% and 10%, respectively).

About the Households and the Environment Survey

The Households and the Environment Survey asks Canadian households about their activities and behaviours with respect to the environment. It covers a wide variety of topics including water and energy consumption and conservation, hazardous products used in the home, and the household's interactions with nature. Data from the survey are used by governments to guide policies and programs, by researchers to learn more about Canadians and by individuals to see how they compare to the rest of the country.

The target population of the 2013 Households and the Environment Survey consisted of households in Canada, excluding households located in Yukon, Northwest Territories and Nunavut, households located on Indian Reserves or Crown lands, and households consisting entirely of full-time members of the Canadian Armed Forces. Institutions and households in certain remote regions were also excluded.

Definitions, data sources and methods: [survey number 3881](#). Available in CANSIM: tables 153-0151 to 153-0152.
