Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Note

Due to rounding, the sums of individual items may not agree exactly with the totals.

Five-year averages exclude years without data.

Concepts, methods and sources published annually in the October issue.

This publication was prepared under the direction of:

- **Karen Gray**, Unit Head, Grain Marketing Unit
- **Susan Anderson**, Officer, Grain Marketing Unit
- **Leslie Macartney**, Analyst, Grain Marketing Unit
- **Faye Price**, Analyst, Grain Marketing Unit

Situation Report — February 2010

US and world supply

The United States Department of Agriculture (USDA) released its latest global supply and demand estimates for 2009/2010 on February 9.

Global wheat supplies were estimated to be 1.4 million metric tonnes higher than estimated in January as a result of increased production for Argentina and Ukraine. Abundant, late-season rains raised harvested area and yields in key eastern growing areas in Argentina, adding 1.0 million metric tonnes to production. Ukraine production increased after state statistical committee estimates boosted yields.

Global wheat exports and imports were both increased from previous estimates. Exports were raised for Argentina based on larger supplies and more favourable government policies towards exports. Exports for Turkey were also increased to reflect stronger shipments to neighbouring countries. Reductions in exports for Pakistan and Uruguay partly offset these increases. Imports were raised for Afghanistan, Turkey and Uzbekistan while imports were decreased for Pakistan. Global wheat consumption for 2009/2010 was projected to be higher by 1.1 million metric tonnes because of higher feeding in Canada and food use in Afghanistan.

For 2009/2010, global coarse grain production was estimated to be 1.6 million metric tonnes higher. An increase in Argentina corn production only partly offset lower EU-27 corn production and lower Ukraine barley and oats production. Additional rainfall in the main corn growing areas improved growing conditions in Argentina. Corn production was raised 2.2 million metric tonnes as a result of higher expected yields and harvested area. EU-27 corn production declined as corn area in Italy was revised downward. Ukraine barley and oats production were lowered based on the latest changes to state statistical committee estimates.

Slight increases were made to both imports and exports for global coarse grains. Reduced US corn exports were more than offset by increases for Argentina. Sorghum imports were increased for Japan and Mexico and exports for the United States. Global coarse grain consumption was projected to be 3.4 million metric tonnes higher. More corn feeding in Argentina and corn for ethanol use in the United States accounted for the higher consumption while lower barley feeding in Australia, Iran, Turkey and Ukraine tempered some of the gains.

Global oilseed production was projected to be 433.7 million metric tonnes, an increase of 2.1 million metric tonnes from January. A 1.6 million metric tonne increase in global soybean production accounted for most of the change. Production prospects in South America continued to improve with timely rainfall. Production increases in Ukraine and Russia pushed global sunflower seed production higher while global rapeseed production was raised due to a larger projected EU-27 crop.

Global oilseed trade was raised because of larger soybean imports for China and Egypt. Increased canola/rapeseed crush in Canada, China and the EU-27 was reflected in higher global oilseed crush estimates.

DDG Futures to be introduced

The CME Group Inc. announced that it will launch a futures' contract for the ethanol byproduct distillers' dried grains (DDGs), with trading to start April 26. One DDG contract will be equal to 100 short tons of distillers' dried grain. Deliverable grades must include a minimum of 26% protein and 8% fat and a maximum 12% fiber and 11.5% moisture.

The addition of a DDG futures' contract will bring price discovery tools and price transparency to the market. The contract will also complete the CME's product suite for the corn crush for ethanol. Ethanol producers will have the ability to create a complete risk management profile through hedging both inputs (corn and natural gas) and outputs

(ethanol and DDGs). Livestock producers and feeders and feed manufacturers who use DDGs in their feed will have a price risk management tool to hedge their feed inputs. The contract will also offer a transparent “benchmark price”.

Distillers’ dried grains are a by-product of corn-produced ethanol. They are used mainly for animal feed, including beef, dairy, and hog.

CWB extends producer payment sign-up deadlines

The Canadian Wheat Board (CWB) extended the sign-up period for the Fixed Price Contract (FPC) and the Basis Price Contract (BPC) to January 31, 2011 in response to farmer input. The later deadline would allow producers more time to assess harvest and market conditions before making pricing decisions. Sign-up began on February 22, 2010 for the 2010/2011 FPC and BPC programs.

The FPC allows producers to set a flat price for their wheat that can be locked in any day between February 22, 2010 and January 31, 2011. The price is set daily based on the average price of Western Canadian wheat already priced for sale by the CWB and the current market value of wheat yet to be priced.

The BPC allows producers to lock in a total return for wheat by pricing basis and futures’ values separately. The futures’ component can be priced up to a year in advance of harvest. An adjustment factor is included at sign-up to account for sales already priced by the CWB.

Ontario durum wheat growers have new pricing system

A new pricing mechanism for Ontario durum wheat growers was announced by Palmerston Grain. Producers will be able to forward contract with a price that is based off Minneapolis spring wheat futures, combined with a local basis factor. The new format will allow producers to price their durum crop similar to how they would wheat, corn or soybeans. The price quote represents a No. 3 or better product with a protein premium included. Durum wheat is typically priced at a premium to spring wheat.

The Ontario durum wheat industry is still in the early stages of development. Only a small amount of seed, developed by C&M Seeds, is available to select growers. All production is contracted based on a price delivered to Palmerston Grain. The grain is then delivered to Howson & Howson where it is milled for pasta makers. Traditionally, pasta makers sourced their entire product requirements from Western Canada.

Research dollars flow to the industry

Canadian flaxseed, sunflower and lentil industries benefited from recent funding announcements.

Agriculture and Agri-Food Canada pledged up to \$5.9 million in funding to the Flax Council of Canada to help create new flaxseed varieties and develop an improved method for flaxseed testing. A total of \$4.0 million will come from the Developing Innovative Agri-Products program (DIAP) for the development of new herbicide tolerant Canadian flaxseed to improve the performance of flaxseed. The remaining \$1.9 million will come from the Canadian Agricultural Adaptation Program (CAAP) to develop sampling and testing methods to identify the presence of genetically modified flaxseed in Canadian flaxseed exports.

Researchers at the University of British Columbia received \$10.5 million from Genome Canada through the Government of Canada, Genome BC and international partners. The funding will be used to create the first reference genome of the sunflower family to aid in producing hybrid sunflowers that provide both biofuel and food products. New and conventional technologies will be used to sequence, assemble and annotate the genome of the cultivated sunflower. This information will be used to make advancements in crop improvement, weed control, and the development of woody sunflower species as a new biofuel. One potential application includes the creation of a hybrid sunflower variety grown as a dual-use crop. The wild Silverleaf species of sunflower will be crossed with a commercially viable sunflower plant, producing seeds for food and oil and stalks for wood or to be converted to ethanol. Research will target the development of a breeding program within four years.

The Saskatchewan Pulse Growers and the Natural Sciences and Engineering Research Council have committed \$3.8 million to Dr. Bert Vandenberg of the University of Saskatchewan to continue his lentil breeding program. The funding will be used to better understand lentil genetics and use that knowledge to create varieties with improved disease resistance and enhanced nutritional value. The result could be designer lentils tailored to meet the needs of individual markets.

Green lentils for Indian market

Saskatchewan Pulse Growers (SPG) have funded a research project that looked at the potential for Saskatchewan grown green lentils to be used as an ingredient in traditional Indian foods. Researchers at the Tamil Nadu Agricultural University (TNAU) in Coimbatore, India conducted the research, consisting of a comparative study of the food related characteristics of native pulses versus dehulled green lentil. TNAU found that lentils were a suitable ingredient for most traditional Indian foods and that there was an opportunity to market lentil based food products in India.

As a result, SPG will soon launch the Kanadal brand, a Saskatchewan grown dehulled green lentil. Work is continuing between the SPG and Saskatchewan pulse trade to develop brand and user agreements for Kanadal.

India consumes about two million tonnes of pigeon peas annually. This number is expected to grow as India's population continues to expand. SPG has set a goal of replacing at least 10%, or 200,000 metric tonnes, of India's pigeon pea market with dehulled green lentils from Saskatchewan.

Prices

On February 22, the Canadian Wheat Board (CWB) released their first Pool Return Outlook (PRO) for the 2010/2011 crop year. Pressure on the market was expected to continue into the new marketing year despite an anticipated decline in world wheat, durum wheat and barley production. Large stocks will be carried forward, limiting some of the upward pressure reduced production could bring to the market.

Corn futures on the Chicago Board of Trade (CBOT) struggled to gain momentum throughout the month as ample supplies continued to weigh on the market. Weaker equities and crude oil and a stronger US dollar kept the market under pressure during the first half of the month. Offsetting some of the downward pressure was the lack of farmer selling. Winter storms added support mid-month as cash prices remained firm and feed demand increased. Weather continued to affect the market as the month progressed. Prices rallied on reports of heavy rains in South America possibly hurting crops and weather service predictions of spring flooding in the United States. Even as producer selling started to pick up, losses on the futures' market were limited by concerns about snowmelt that could result in a wet start to the planting season.

Commodity funds continued to influence wheat futures' prices on the CBOT. Large ending stocks and slow export demand limited any upside potential the market could generate. Spillover support from corn and soybeans helped to move prices higher during the last half of the month.

Soybean futures' prices started the month lower as growing global supplies and the threat of decreasing demand from China weighed on the markets, despite support from a weaker US dollar. A mid-month rally led by technical buying and firm cash prices returned some strength to the market. Prices rose as traders tried to entice farmer selling. Concerns of heavy rains threatening Argentina soybean crop quality and delaying northern Brazil's harvest kept prices supported as the month drew to a close. The firm US dollar and losses in equities, gold and silver limited potential gains.

A strong Canadian dollar, lack of fresh export demand and limited domestic buying weighed on canola futures' prices early in the month. The large global oilseed supply situation also added to the bearish price sentiment. Losses were limited by lack of farmer selling and some spillover strength from CBOT soybean futures. As the month ended, a weaker Canadian dollar and talk of fresh export business buoyed prices. Steady domestic crusher demand also lent support to the market.

Lentil markets remained under pressure as export demand slowed. Declining values for lentils in India and estimates of a good Turkish crop weighed on prices. Edible pea prices also declined as demand backed off. India has not been the aggressive buyer that they were last year. The rabi crop is progressing well, with seeded acres up from previous seasons. This could limit demand into the spring as harvest begins. Markets continued to watch India for news about policies which will affect trade during the 2010/2011 marketing year. The two main policies of interest include allowing pulses to be used by the public food distribution system and banning pulse exports from India. Large stocks of peas in Canada also kept pressure on edible pea prices, limiting any upward price potential from a weaker Canadian dollar.

1. Number 1 and number 2 represent the grade and quality of the grain.

2. Includes flour that is not specified.

3. Millfeeds are the by-products of the milling process used mainly for animal feed.

1. Excluding Durum.

2. Includes British Columbia.

Note(s): Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries. Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered.

1. Includes unlicensed shipments to U.S. markets.

2. Includes British Columbia.

Note(s): Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries. Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered

1. Beginning in June, 2002 excludes deliveries to process elevators.

2. Includes unlicensed shipments to U.S. markets.

3. Includes wheat (excluding durum), durum wheat, oats, barley, rye, flaxseed and canola.

4. Includes British Columbia.

Note(s): Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries.

Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered.
