## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

## Note

Due to rounding, the sums of individual items may not agree exactly with the totals.

Five-year averages exclude years without data.

Concepts, methods and sources published annually in the October issue.

This publication was prepared under the direction of:

- **Sheila Young**, Acting Unit Head, Grain Marketing Unit
- **Faye Price**, Analyst, Grain Marketing Unit
- **Leslie Macartney**, Analyst, Grain Marketing Unit
- **Susan Anderson**, Officer, Grain Marketing Unit

## December 2010 Canadian grain stocks

At December 31<sup>st</sup>, total Canadian stocks of all major grains and oilseeds were down compared to the previous year as a result of reduced crop production in 2010. Farm stock data were obtained from a Statistics Canada survey of farmers while commercial stock data were obtained from the Canadian Grain Commission and from Statistics Canada surveys of commercial enterprises.

Stocks of wheat, excluding durum were estimated to be 16.5 million metric tonnes, 2.0% less than the same time last year. A slower export pace during the fall shipping period and reduced production for 2010 combined to decrease December stocks. Stocks of durum wheat at December 31, 2010 were lower by almost 2.0 million metric tonnes compared to 2009 as poor growing conditions drastically cut production from prior years. Exports recovered from a slow start during the last crop year as global durum wheat production also stumbled and quality issues impacted the availability of supplies.

Reduced production of almost 2.0 million metric tonnes resulted in barley stocks at December, 2010 declining by 1.8 million metric tonnes from December, 2009. Higher global corn prices have caused some global feed grain users to turn to feed barley to meet their needs, as evident in the increase in exports for the first five months of the crop year. Export bans from the Former Soviet Union countries have also left importers short of traditional supplies of feed. Feed barley exports, however, may be tempered moving forward as a large, poor quality Australian wheat crop becomes available to the market.

Canola stocks were 1.2 million metric tonnes lower than the same time last year as wet weather throughout the growing season reduced production. Increased domestic crush was a large user of Canadian canola as new plants came into full production and crush margins remained strong.

Corn stocks increased over 1.0 million metric tonnes from December, 2009. Ideal growing conditions in Eastern Canada resulted in record production of corn and strong prices throughout the fall encouraged brisk movement off the farm. Exports have also increased as global feed grain supplies are limited due to production problems in traditional markets.

## World supply and demand estimates

On January 12, 2011, the United States Department of Agriculture (USDA) released updated world supply and demand estimates for the 2010/2011 crop year.

The estimate for global wheat supplies was raised only slightly from last month. Beginning stocks for Argentina were increased by 0.9 million metric tonnes while production was also higher by 0.5 million metric tonnes as harvest results indicated higher-than-expected yields. Production was also raised for Brazil and EU-27. Meanwhile, production in Kazakhstan was lowered by 1.3 million metric tonnes and Australian wheat production was reduced by 0.5 million metric tonnes as heavy rains and flooding in late December further increased crop losses in Queensland.

Global imports and exports of wheat were both raised marginally for 2010/2011. Imports increased for South Korea, Thailand and Vietnam while imports were lowered for EU-27 based on the slow pace of import licenses to date. Major shifts among exporters were predicted as importers focus on U.S. supplies to meet their milling needs. Australia exports decreased by 1.5 million metric tonnes as quality problems continue to limit export opportunities. Exports from Kazakhstan were reduced 1.0 million metric tonnes with lower supplies.

For 2010/2011, global wheat consumption was estimated to be 1.2 million metric tonnes lower as a result of lower wheat feeding in EU-27, the United States and Kazakhstan. Food use was also lower for EU-27 and Pakistan.

Global ending stocks were increased by 1.3 million metric tonnes as higher estimates for EU-27, Argentina and Australia more than offset lower U.S. wheat stocks.

Global coarse grain production was estimated to be lower this month with decreased corn, sorghum, oats and rye production. Partially offsetting the reductions were increases in barley production in Argentina and EU-27. Global trade was reduced as higher expected prices and tighter supplies slowed corn imports and exports. Corn consumption decreased as a result of less feeding in South Korea and Turkey. World ending stocks for corn were projected to be 3.0 million metric tonnes lower than last month with more than two-thirds of the decrease coming from a reduction in U.S. stocks.

Global oilseed production for 2010/2011 was reduced by 2.3 million metric tonnes from last month to 440.4 million metric tonnes. Soybean production was estimated at 255.5 million metric tonnes worldwide. Lower projected yields pushed Argentine soybean production down by 1.5 million metric tonnes to 50.5 million metric tonnes. Ending stocks for 2010/2011 were reduced 2.0 million metric tonnes globally with Argentine and U.S. stocks accounting for most of the change.

### **Biodiesel plant to use flaxseed for production**

Energy Innovation Corp., a small Canadian start-up company, released plans to open a biodiesel plant in Toronto, Ontario this spring that will produce clean fuel, animal feed and human food all from flaxseed. The company's production process will create multiple revenue streams, but no waste.

The planned plant will produce up to 10 million litres of biodiesel annually. The company has the rights to a process that uses 40% of the flaxseed for fuel, with the remainder turned into meal. The meal has lucrative markets as chicken, cattle, shrimp and fish feed because of its high level of Omega-3 fatty acids. Energy Innovation also has plans to market a high-protein, gluten-free flax flour for human consumption.

Since 2006, Energy Innovation Corp. has operated a 3.2 million litre capacity pilot plant in Port Colborne, Ontario. The plant produces biodiesel from used coffee grounds. The company also wants to open a minimum of eight more plants in the province over the next three years.

Energy Innovation is planning for small facilities to guarantee a secure supply of flaxseed from local producers. Flaxseed for the Toronto plant will be produced on a 1,200 acres farm owned by a major shareholder in the company.

A planned government mandate will require a 2% renewable content in all diesel fuel in 2011, although a start date has not been set. Canada currently produces approximately 200 million litres annually but will need about 550 million litres to meet the new mandate.

### **Weather still an important market influence**

Weather conditions around the world continued to influence cash and futures' prices. The La Niña weather pattern in the Pacific Ocean has been attributed to the cause of eastern Australia's severe rain and flooding, Argentina's dryness and expanding drought conditions across the southern and central US Plains.

The La Niña pattern is characterised by unusually cold ocean temperatures in the eastern equatorial Pacific. The southern oscillation index, a measure of subsurface temperatures in a zone of the south-eastern Pacific, needs to reach a reading of 8.0 before a La Niña weather event is declared. In December, the reading was 26.8. A strong La Niña pattern is currently dominating the Pacific Ocean.

The strong weather pattern remains firmly in place across the Pacific Basin. Most climate experts believe that this pattern will continue at least through the first quarter of 2011.

La Niña is already having an impact around the world. It has contributed to Australia's wettest spring on record and one of the wettest Decembers with widespread flooding. It has also been attributed to flooding in Asia and northern South America and more drought-like conditions in Argentina.

In North America, La Niña typically influences weather patterns in January. Historical effects include cold temperatures in the Upper Plains, dry and warm weather in California, dry weather in the southeast, especially Florida, and unusually soggy weather in the Northwest. The La Niña weather pattern is characterised by more weather extremes and may contribute to drought. The timing of when this La Niña weather event ends will be important in determining its effect on 2011 North American crop production.

For Western Canada, Environment Canada is predicting mainly normal temperatures across Alberta, Saskatchewan and Manitoba from January to March while British Columbia will experience below normal temperatures. The three Prairie Provinces will receive normal precipitation levels during the same period. An area in southern Saskatchewan and the southern areas of British Columbia will experience above normal precipitation.

Heading into April, Environment Canada is forecasting below-normal temperatures for British Columbia, Alberta and approximately two-thirds of Saskatchewan. Manitoba and Ontario will see normal temperatures. Precipitation will be above normal for most of Western Canada and much of Ontario in March and April. Some areas in southeast Alberta and southern Saskatchewan and Manitoba will receive normal to below normal precipitation.

### **Prairie flood concerns**

Manitoba Water Stewardship provided its first flood outlook for 2011, predicting a 2009-level flood on the Red River this spring, assuming average weather. Above normal precipitation could produce a flood of 1997 levels when the province experienced the Flood of the Century. High river flows, above normal water content in the snow pack and a forecasted cool, wet spring will produce near-record flood conditions along the Red River.

The flood potential is also high along other major Manitoba rivers, including the Souris, Pembina, Assiniboine, Winnipeg, Saskatchewan and Fisher Rivers if the weather is normal until spring snow melt. Unfavourable weather could result in close to record flooding.

The United States National Weather Service (NWS) released a similar warning for the Red River Basin in North Dakota. NWS officials predicted a 25% chance of the Red River's crest reaching or exceeding the 2009 peak at Fargo and Grand Forks, North Dakota. Snowfall in the Red River Basin is 40% above normal so far. The area could receive twice its normal snowfall by the end of winter if patterns persist. The region also received 50% above normal rainfall last summer and fall, meaning lakes, rivers and streams on the US side of the border are at record high levels.

Above average snowfall and high fall moisture levels combined to raise concern about potential spring planting delays throughout much of the Prairies. The amount of water currently held in the snow pack is more than double the average level for this time of year. Many parts of Saskatchewan and Alberta could experience overland flooding this spring when the snow melts because the already saturated soils will not be able to absorb the water and it will simply run-off.

### **Prices**

On January 14, an uprising in Tunisia, sparked by rising food prices, high unemployment and a widening gap between rich and poor, led to the ousting of President Zine al-Abidine Ben Ali. The uprising inspired anti-government demonstrations in Egypt where President Hosni Mubarak faced his biggest challenge during his 30-year rule. After a week of escalating protests, almost 1000 people had died.

Low wages and rising prices have triggered protests in Egypt since 2004. In October, Egypt announced additional spending of 3.5 billion pounds (US\$600 million) to cover rising food costs. Government officials have said that the country has six months of wheat supply in inventory and that its buying program was normal.

Anger has also erupted in Algeria, Morocco and Yemen in recent months because of spiralling food prices. Many countries in the region have either relaxed food taxes or duties on food imports or cut prices of staple foods.

Rising food prices triggered days of rioting in many Algerian towns earlier this month. To calm the situation, the government reduced the cost of some foodstuffs and increased by 18% the amount of soft wheat it supplies to the local market each month. Since the beginning of January, Algeria has purchased almost 1.0 million metric tonnes of wheat in an attempt to build up stocks.

International wheat markets have reacted to the events in North Africa and the Middle East by pushing prices higher. Wheat futures on the Chicago Board of Trade (CBOT), the global benchmark for wheat, have surged 74% in the past 12 months while European wheat futures were at new highs. Markets continued to anticipate higher demand from key importers nervous about food security amid civil unrest.

Increased rainfall throughout January helped to improve soybean production prospects in Argentina. While the rainfall was not widespread, the dry regions continued to shrink. Above normal precipitation was registered in Buenos Aires province, La Pampa and several regions of Entre Rios and Santa Fe. The northern agricultural areas also received good rainfall. Important growing regions of Cordoba and Santa Fe remained concerned about dry conditions. Overall, soybean production prospects have clearly improved, weighing on CBOT soybean futures. Also pushing futures' prices lower were speculative profit taking and the rebalancing of fund positions. Mid-month, prices soared to 2-year highs after the USDA lowered supply forecasts to minimal levels, increasing the pressure on 2011 production to ease the burden of strong demand on supplies. Markets saw the need to ration demand and entice farmers into expanding planted acres for 2011.

Beneficial Argentine rains came too late for most of the corn crop as above-normal temperatures continued to impact growth. CBOT corn futures found support from worries about Argentina's harsh weather. A tightened supply forecast from the USDA caused the market to surge by the daily 30-cent limit to a fresh 29-month high. For the fourth time, the USDA reduced estimates for the US corn harvest due to stressful summer weather. Prices remained well-supported as the market tried to slow demand for limited supplies and encourage farmers to expand spring plantings. Surging wheat prices also supported corn because of the substitutability for livestock feed.

Steady domestic processor demand and the pricing of old export business underpinned Winnipeg canola futures' prices. A lack of farmer selling also supported prices early in the month; however, by the end of January, scaled-up farmer selling and hedging helped to temper some of the gains in canola. Also influencing canola futures' prices throughout the month were the CBOT soy complex, value of the Canadian dollar and South American soybean production prospects.

On January 27, the Canadian Wheat Board (CWB) released its January 2011 Pool Return Outlook (PRO) for the 2010/2011 crop year. Wheat values increased between \$5 and \$19 per metric tonne, depending on grade, class, and protein level. Durum wheat was higher by between \$3 and \$17 per metric tonne. Malting barley was up \$2 per metric tonne, while Pool A feed barley rose \$2 per metric tonne and Pool B feed barley rose \$10 per metric tonne.

According to the CWB, futures values across all three US commodity exchanges reached new contract highs in both the March and May futures months. Cash prices also remained robust with quality and protein spreads relatively wide. Prices have risen and will continue to rise to either slow demand or pull wheat out of areas that require extra motivation to market wheat.

Dry pea markets continued to strengthen as export demand remained brisk. India returned to the market for yellow peas as cooler than normal temperatures lowered expectations for the Indian pea crop. Overnight lows dipped below 5 degrees Celsius over a significant portion of the north and northwest India during the middle of January. Producers reported some frost damage to crops, although the severity is varied. Also supporting yellow dry pea prices was a poor Australian desi chickpea crop. The rainy harvest season left the country with a shortage of good quality product.

Chickpea markets have found support from weather problems in some of the top producing nations. Recent weather concerns in India may have an impact on the country's Kabuli chickpea crop while flooding in Australia during harvest has downgraded the quality of that country's desi chickpea crops. Importers have turned to Argentina and Canada to fill their immediate needs, allowing exporters to raise asking prices since the start of the year.

Following the announcement of a limited trade agreement with Mexico, the canary seed market jumped 5 cents per pound higher. The arrangement will allow Canadian canary seed shipments for the next six months but will maintain a zero tolerance policy on certain types of weed seeds. If shipments are found to be free of quarantined weed seeds, the product will be allowed to proceed to buyers in Mexico. However, if the shipment is found to have weed seeds, it will have to go for re-cleaning in Mexico before proceeding.

1. Excluding Durum.

2. Includes British Columbia.

**Note(s):** Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries. Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered.

**Table 6**

1. Includes unlicensed shipments to U.S. markets.

2. Includes British Columbia.

**Note(s):** Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries. Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered

1. Beginning in June, 2002 excludes deliveries to process elevators.

2. Includes unlicensed shipments to U.S. markets.

3. Includes wheat (excluding durum), durum wheat, oats, barley, rye, flaxseed and canola.

4. Includes British Columbia.

**Note(s):** Deliveries are as reported by the Canadian Grain Commission (with any adjustments prorated monthly) plus estimates for unlicensed deliveries. Includes deliveries to condominium storage as of August, 2003. Negative deliveries may indicate that farmers removed more grain from condominium storage than they delivered.
