Aircraft Movement Statistics August 2004 (Preliminary)

Airports with NAV CANADA Air Traffic Control Towers

The data in this bulletin represent preliminary monthly statistics for airports with NAV CANADA air traffic control towers.

In August, the 42 Canadian airports with NAV CANADA air traffic control towers reported 400,934 take-offs and landings, a decrease of 1.6% compared to August 2003 (407,577). This decline represents the sixth consecutive decrease in year-over-year comparisons of monthly movements. Twenty-three airports showed year-over-year decreases in aircraft movements for August 2004 compared to August 2003. Three airports showed decreases greater than 20% this month compared to ten airports in July.

Itinerant movements (flights from one airport to another) increased by 0.6% (up 1,862 movements) in August 2004 compared to August 2003. This increase in monthly year-over-year percentage changes follows a decrease in July. Local movements (flights that remain in the vicinity of the airport) declined by 7.4% (down 8,505 movements) in August 2004, the sixth consecutive month of decline.

The top ten airports in terms of volumes of itinerant movements in August showed year-over-year variations ranging from 40.3% (2,543 movements) at St-Jean, Quebec, to -9.2% (-939 movements) at Victoria Intl. Six of the top ten airports recorded increases in itinerant movements compared to four airports in July 2004.

The top ten airports in terms of local movements showed year-over-year variations ranging from 62.4% (3,416 movements) at Toronto/Buttonville Municipal to -18.0% (-1,089 movements) at Waterloo Regional. Four of the top ten airports recorded decreases in local movements compared to nine airports in July 2004.

More detailed statistics for airports with NAV CANADA air traffic control towers and flight service stations will be released in the Aircraft Movement Statistics monthly report (TP141 - Volume 1). Statistics for airports without air traffic control towers will appear in TP 141 – Volume 2. Upon release, the TP141 reports are available (free) on-line at <http://www.tc.gc.ca/pol/en/Report/tp141e/tp141.htm>

September 2004

Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Data Source and Methodology

Aircraft Movement Statistics are accumulated from data originating with air traffic control tower units. Because staff in these units are highly trained in factual observation and actual reporting, the entries into the data base are of a very high quality. To maintain uniformity in the reporting of source data, the Aviation Statistics Centre (ASC) issues air traffic control units with an "Air Traffic Designators" handbook (TP-143) showing the official Transport Canada aircraft type designators and the designators of various domestic and international air carriers. Data errors caused during transcription and transmission on the NAV CANADA Aircraft Movement Statistics (NCAMS) network are identified as part of the built-in editing procedures. Furthermore, extensive editing cycles are part of the computer processing programs. All identified errors are manually corrected by ASC editing staff.

Collection

The records are completed daily, based on a twenty-four hour clock running from zero hour to 23:59. The times recorded are Greenwich Mean Time (GMT); however, published statistics are shown in local times. The records are transmitted electronically to the Aviation Statistics Centre (ASC). The Aviation Statistics Centre maintains a data bank of current information on all registered aircraft. The storage of this information allows for a reduction in the reporting burden of the survey respondents and limits the element of human error associated with the preparation of source documents. The data in the bank include registered aircraft identifications and their corresponding aircraft types, gross take-off weights, types of power plant (piston, jet or turboprop); whether the aircraft are fixed wing, helicopters or gliders. The data also provide a basis for identifying type of flights (commercial, private and government) and the geographical area in which the flights take place. The data bank also includes an Airport Environmental file against which the airport category is checked; the reported runway is validated and the time difference between GMT and local is allocated.

Symbols
