## How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca), e-mail us at [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca), or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

### Statistics Canada's National Contact Centre

Toll-free telephone (Canada and the United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

### Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## To access this product

This product, Catalogue no. 54-205-X, is available free in electronic format. To obtain a single issue, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca) and browse by "Key resource" > "Publications."

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on [www.statcan.gc.ca](http://www.statcan.gc.ca) under "About us" > "The agency" > "Providing services to Canadians."

## What's new

---

The following changes to ports have been made in this publication

- Prior to reference year 2008, the port of Saguenay was called Chicoutimi
- Starting with reference year 2008, data for the ports of Blubber Bay and Vananda are included in Texada Island
- Starting with reference year 2008, the ports of Fraser River, North Arm Fraser and Vancouver were amalgamated and will now be referred to as Metro Vancouver

## Highlights

---

- Canadian ports and marine terminals handled 462.6Mt of cargo in 2008, down 1.4% from 2007, primarily due to lower outbound international shipments.
- The decline in outward international shipments was partially offset by an increase in inbound international shipments (2.2%), as well as in the total domestic cargo (1.1%).
- Both the volume and the tonnage of international containerized cargo handled at Canadian ports increased 5.0% and 1.3%, respectively, during the year. More than 4.4 million twenty-foot equivalent units (TEUs) of containers, and 36.7 million metric tonnes of containerized cargo were handled in 2008.
- Total tonnage of shipments to and from the United States continued its downward trend (-3.8%) in 2008. The decline in shipments destined for Atlantic and Gulf region of the United States was more than enough to overcome the increase in inbound shipments from the United States. Shipments to and from the United States represented 36.4% of the total international tonnage.
- Total international shipments, excluding the United States, recorded a 1.7% decline to 207.1 million metric tonnes in 2008, due primarily to lower outbound cargo (-3.2%).
- Total cargo handled by the ports and marine terminals of the 17 Canadian Port Authorities (CPAs) decreased 0.6% in 2008. The tonnage shipped through these ports and terminals represented almost 55% of the total marine cargo handled in Canada.
- Country's busiest port Metro Vancouver, formed through the amalgamation of three CPAs on the west coast, handled 96.8 million metric tonnes of cargo in 2008, up 1.4% due mainly to higher domestic shipments.
- The largest decline in total shipments during the year was registered at Port-Cartier, where the tonnage dropped 4.2 million metric tonnes due mainly to lower international outbound shipments of iron ores and concentrates.
- The largest increase (1.6 million metric tonnes) in the total tonnage handled during the year was recorded at Howe Sound due to higher domestic shipments of logs and other wood in the rough.
- The port of Come-By-Chance handled 30.5 million metric tonnes of cargo in 2008, down by more than 3.8 million metric tonnes (-11.1%), primarily due to reduced tonnages of crude petroleum handled at the port.
- Port Hawkesbury handled over 29.8 million metric tonnes of cargo in 2008, down 1.9 million metric tonnes (-5.9%) compared to the previous year. The decline was attributed mainly to lower international inbound shipments of crude petroleum.
- Total tonnage handled at the Port of Montréal, including Contrecoeur, increased 1.2 million metric tonnes (4.8%) to over 26.8 million metric tonnes in 2008. Both higher international and domestic shipments contributed to the increase.
- The port of Québec, including Lévis, handled 26.8 million metric tonnes of cargo in 2008, up 0.4% compared to 2007. The increase in domestic tonnages handled was mitigated by the decline in international shipments.
- Shipments handled at the port of Saint John, New Brunswick, totalled 25.4 million metric tonnes in 2008, down 2.8% compared to the previous year due mainly to lower international outbound shipments.

- Tonnage handled at the port of Sept-Îles, including Pointe-Noire, reached 22.2 million metric tonnes in 2008, up 3.7% from the 2007 level, due mainly to higher international outbound shipments of iron ores and concentrates, the port's primary commodity.
- The port of Nanticoke handled 14.1 million metric tonnes of cargo in 2008, up 8.2% from the level in 2007 on account of both higher domestic and international shipments.
- Total tonnage handled at the port of Hamilton decreased 6.1% to 10.8 million metric tonnes in 2008 due mainly to lower domestic shipments of iron ores and concentrates.
- Total shipments at the port of Halifax declined to 10.8 million metric tonnes, down 14.5% from the 2007 level due primarily to lower international shipments.
- The port of Prince Rupert handled 9.9 million metric tonnes of cargo in 2008, down 5.7% compared to 2007 due mainly to decreased outbound shipments of coal and wheat.
- Commodity-wise, the largest decline in total shipments was observed in the tonnages of crude petroleum (7.2 million metric tonnes). As the single largest commodity handled within the Canadian marine transportation system, crude petroleum represented almost 20% of the total tonnage. In contrast, total tonnages of all other commodities, excluding crude petroleum, handled by the ports and marine terminals increased by 0.1% to 370.8 million metric tonnes in 2008.

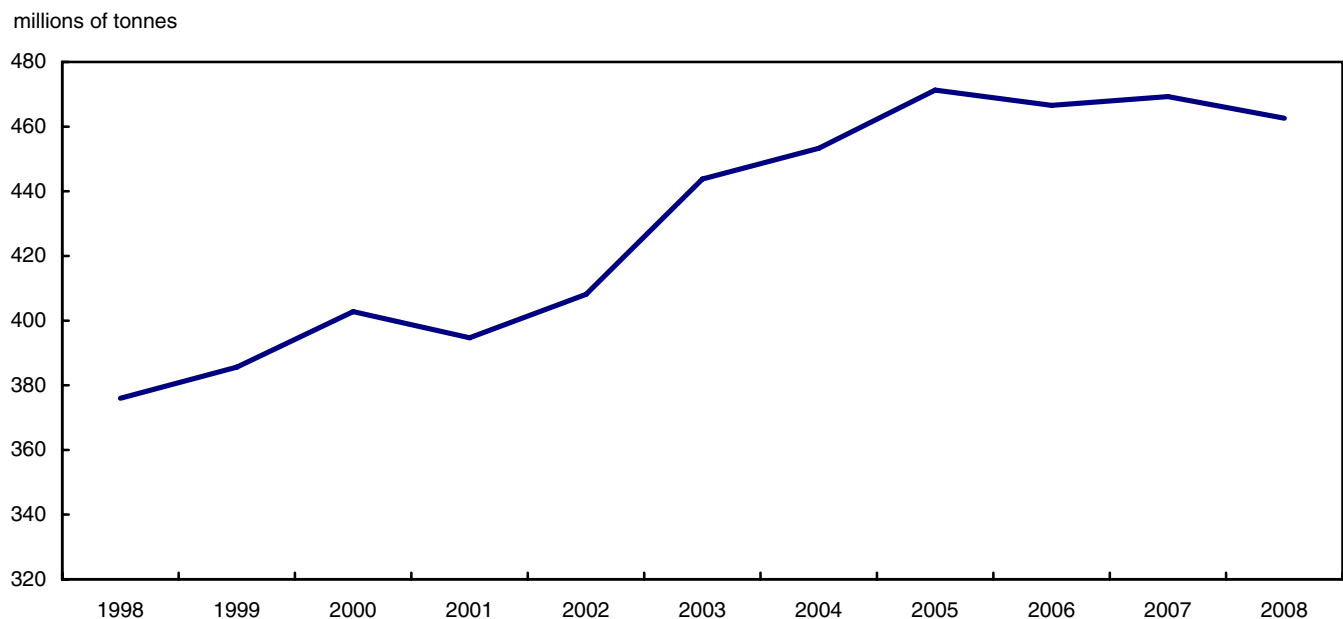

## Shipping in Canada 2008 (preliminary)

---

Canada's economic growth in 2008 was impacted by the global economic recession, especially during the last quarter of the year.<sup>1</sup> The year started with high commodity prices and trade surplus for Canada, however, by the end of the summer season, the Canadian economy began to shrink, as exports suddenly dropped and commodity prices dipped. In addition, Canada could not escape the global meltdown emanating from financial markets. Though international trade volume increased 6.2% in 2008,<sup>2</sup> both imports and exports fell sharply in nominal terms during the last quarter of the year.<sup>3</sup>

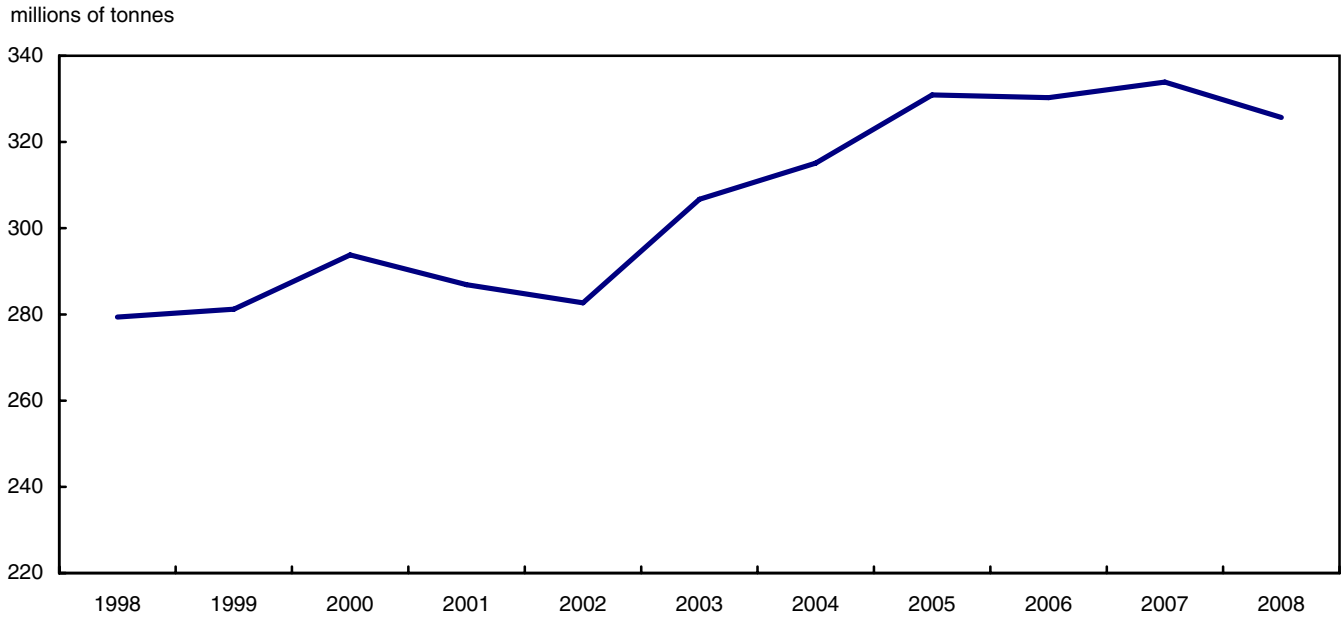

Shipping activities at Canadian ports and marine terminals in 2008 mirrored that of the performance of the Canadian economy. The ports and marine terminals experienced marginal gains in tonnages for the first nine months of the year and then declined toward the end due to the global financial crisis that began in October 2008. Overall, the facilities handled 462.6 million metric tonnes (Mt) of cargo in 2008, down 1.4% from 469.3Mt in 2007. Decreases in outbound international cargo were sufficient to offset gains realized in inbound international shipments and total domestic cargo. A discussion of the shipping activities of the ports and marine terminals is provided below.

**Chart 1**  
**Total cargo handled at Canadian ports and marine terminals**

1. Comparative analyses based on data taken from various issues of the Canadian Economic Observer, Statistics Canada catalogue No. 11-010-XIB.
2. The nominal value of total merchandise trade was registered \$932.3 billion in 2008. The value of trade with the US rose 3.9% to \$650.3 billion during the year. It increased 7.4% with the European Union (EU) and the OECD (Organization for Economic Co-operation and Development) countries (excluding the United States), in 2008. With all other countries, it went up by 18.0% during the year.
3. Nominal exports fell 10.0% to \$115.8 billion during the last quarter compared to \$128.8 billion during the third quarter in 2008 and nominal imports declined 2.1% to \$112.4 billion from \$114.8 billion over the same period.

**Chart 2**  
**International cargo handled at Canadian ports and marine terminals**

**Chart 3**  
**Domestic cargo handled at Canadian ports and marine terminals**

## International marine cargo

Total international cargo handled at the ports and marine terminals dropped 2.5% to 325.7Mt in 2008 due primarily to a decrease in outbound shipments. Commodities which mainly contributed to the decline in the outbound cargo included: wheat (down 2.8Mt), crude petroleum (down 2.5Mt), iron ores and concentrates (down 1.7Mt) and other non-metallic minerals (down 1.4Mt). However, inbound cargo increased 2.2% to 122.4Mt in 2008. Regionally, the largest decline was observed in the shipments destined to Atlantic and Gulf region of the United States (down 6.0Mt) followed by shipments to Asia (down 5.8Mt). On the contrary, shipments arriving from the Middle East (up 1.8Mt) registered the largest increase followed by the Great Lakes region of the United States (up 1.2Mt).

## Container traffic

The containerized portion of international traffic handled by Canadian ports and marine terminals increased in 2008 in terms of both volume and tonnage. Canadian ports handled more than 4.4 million twenty-foot equivalent units (TEUs) during the year, up 5.0% from the levels in 2007. Total containerized tonnage rose by 1.3% to 36.7Mt in 2008 due mainly to higher inbound shipments from ports in Asia and South America. Increase in outbound shipments to ports in Europe and South America also contributed to the rise in the tonnage of the containerized traffic. The largest increase in the volume of containerized cargo was registered at the Port of Prince Rupert. The port reported its first full year of operation after the initial start-up during the last quarter of 2007. Port Metro Vancouver led the country's ports in the handling of containerized traffic with more than 56% share of the total container volume in 2008.

## Canada – United States cargo

Total shipments to and from the United States continued to decline for a third consecutive year. Total tonnage fell 3.8% to 118.6Mt in 2008 and. The drop was attributed to lower outbound cargo which decreased 8.3%. Increases in inbound cargo from the United States (up 4.7%) were insufficient to offset the decline. The share of marine shipments between Canada and the United States, as percent of the total Canadian international shipments, slipped marginally to 36.4% in 2008 from 36.9% in 2007.

Outbound shipments destined for the United States decreased 8.3% or 6.7Mt in 2008. Leading the decline in tonnage was crude petroleum (down 1.8Mt) followed by other non-metallic minerals (down 1.6Mt), logs and other wood in the rough and cement (each down 0.8Mt). In contrast, slight gains were registered in the outbound shipments of several commodity groups including iron ores and concentrates and salt. Outbound shipments to the Atlantic and Gulf region of the United States witnessed the largest change in tonnage (down 6.0Mt) in 2008 followed by the Pacific region.

Inbound cargo from the United States rose 4.7% or 2.0Mt in 2008. The increase was attributed largely to the shipments of iron ores and concentrates (up 1.7Mt), followed by gasoline and aviation turbine fuel (up 1.4Mt) and coal (up 0.9Mt). The drop in quantities handled of limestone (down 0.7Mt) and wheat (down 0.6Mt) partially offset the gains in inbound tonnages. Cargo arriving from both the United States Great Lakes region (up 1.2Mt) and the Pacific region (up 1.1Mt) each posted gains in shipments handled. The Great Lakes region continued to account for the majority of the total inbound tonnage from the United States.

In 2008, the share of Canada – United States cargo handled by Canadian registered vessels recovered slightly from those reported the year previous to reach 41.1%. The gain came at the expense of shipments carried by foreign-flag ships whose proportion decreased to 47.1%. While the percentage attributed to United States-flag vessels remained virtually unchanged (11.8%).

From a regional perspective, the share of Canadian flagged ships in the United States Great Lakes region increased to 82.2% in 2008 from 80.8% in 2007. In contrast, the share of Canadian registered vessels carrying cargo in the Pacific region of the United States experienced a decline falling to 23.1% in 2008 from 30.0% the year previous. Shipping activities between Canadian ports and ports in the Atlantic and Gulf region of the United States continued to be handled, almost exclusively (more than 90%), by foreign-flagged ships.

## Canada – Overseas cargo

After registering positive growth for five consecutive years, total overseas cargo (to and from countries other than the United States) decreased 1.7% to 207.1Mt in 2008. The decline in total tonnage was due to a decrease in outbound shipments (down 4.2Mt) which was more than sufficient to offset an increase in inbound shipments (up 0.7Mt) from overseas ports.

International cargo destined for countries other than the United States decreased 4.2Mt (down 3.2%) to 129.2Mt in 2008. The drop in shipments was attributed to decreased tonnages of wheat (down 2.9Mt) and iron ores and concentrates (down 2.0Mt) destined mainly for Asia. Increased outbound tonnages of fuel oils (up 1.8Mt) mostly to Europe were sufficient to partially offset the decline.

International shipments from all countries (excluding the United States) arriving at Canadian marine terminals increased 0.9% to 77.9Mt in 2008. Increases were registered in the tonnages of coal coke and petroleum coke (up 0.5Mt) and salt (up 0.4Mt), mostly from ports in Asia and South America respectively. Decreased shipments of iron and steel (primary or semi-finished [down 0.5Mt]) mostly from ports in Asia were enough to considerably offset the increase.

Vessels registered in Panama (24.3%) continued to lead in transporting overseas cargo loaded or unloaded at Canadian ports. This was followed by vessels registered in Liberia (10.2%), Greece (9.3%), Hong Kong (9.2%) and Marshall Islands (5.8%). Overall, vessels registered in these five countries handled 58.8% of the total overseas cargo. Canadian flagged ships were of negligible importance (0.2%) in carrying overseas shipments.

## Domestic Cargo

Total domestic cargo handled at Canadian ports and marine terminals rose 1.1% to 136.9Mt in 2008<sup>4</sup> after experiencing declines for two consecutive years. Commodity groups that contributed to the increase were: logs and other wood in the rough,<sup>5</sup> other metallic ores and concentrates (each up 3.0Mt) and salt<sup>6</sup> (up 2.1Mt).

The gains in the domestic cargo were considerably offset by declines in the tonnages of several commodity groups. In particular, crude petroleum<sup>7</sup> (down 4.6Mt) along with iron ores and concentrates (down 2.9Mt), gasoline and aviation turbine fuel and wood chips (each down 1.2Mt) contributed largely to the decline.

After a strong growth in 2007, domestic cargo handled in the Atlantic region dropped 4.6Mt to 47.8Mt in 2008. The decrease was almost exclusively due to lower volumes of crude petroleum (down 4.6Mt).

St. Lawrence region registered an increase of 2.6Mt to 29.5Mt in the domestic tonnages handled in 2008. Shipments during the year of other metallic ores and concentrates rose sharply (up 2.9Mt) in the region following the settlement of a two month labour dispute in October 2007. Smaller increases were also observed for fuel oils (up 0.6Mt), salt (up 0.5Mt), coal coke and petroleum coke and wheat (each up 0.4Mt). In contrast, there were reductions in the tonnages handled of iron ores and concentrates (down 1.6Mt) and gasoline and aviation turbine fuel (down 0.6Mt).

Total domestic tonnage handled at the ports and marine terminals in the Great Lakes region edged up 0.6% or 0.2Mt in 2008. Commodity groups which registered gains included salt (up 1.1Mt) and metallic waste and scrap (up 0.4Mt). These gains were largely offset by declines in the shipments of iron ores and concentrates (down 1.3Mt).

Ports and marine terminals in the Pacific region handled 28.9Mt of domestic cargo up 12.8% in 2008. The largest increase was registered in the volume of logs and other wood in the rough (up 3.0Mt) following the resolution of the labour disruptions that occurred in the region in 2007. Other commodity groups which also increased included stone, sand, gravel and crushed stone (up 0.8Mt), limestone (up 0.3Mt) and coal (up 0.2Mt). The increase was partially offset by a decline in the shipments of wood chips (down 1.1Mt) handled during the year.

---

4. Note that domestic cargo is handled twice by the Canadian ports and marine terminals system, once when loaded and again when unloaded.

5. Total shipments increased following the settlement of a labour dispute by forestry workers in western Canada.

6. A harsh winter in 2007-08 resulted in depletion of inventories of salt which needed to be replenished.

7. The volume of crude petroleum which accounted for more than 26% of the total domestic cargo in 2008 decreased largely due to a combination of natural production declines coupled with maintenance shutdowns.

## Port Authorities

Ports and marine terminals under 17 Canadian Port Authorities (CPAs)<sup>8</sup> handled almost 55% of the total cargo in 2008. The total tonnage handled by CPAs dropped 0.6% to 252.5Mt during the year.

Port Metro Vancouver,<sup>9</sup> the nation's busiest port, handled 96.8Mt of cargo in 2008, up 1.3Mt from the previous year, due mainly to increased domestic shipments. The gains were led by increases in shipments of logs and other wood in the rough<sup>10</sup> (up 1.9Mt), gasoline and aviation turbine fuel (up 1.1Mt), coal (up 0.9Mt) and colza seed [canola] (up 0.8Mt). Offsetting the increase in shipments were declines in the tonnages of wood chips (down 0.8Mt), wood pulp (down 0.6 Mt), wheat and fresh, chilled or dried vegetables (each down 0.5Mt).

In addition, Metro Vancouver also handled more than 56% of the total container traffic in 2008. The total volume of containers handled was 2.5 million TEUs. However, the total containerized tonnage at the port dropped 2.8% to 19.3Mt in 2008 which is consistent with a decline in the total volume of loaded containers during the year.

The port of Montréal, including Contrecoeur, handled 26.8Mt of total cargo in 2008, up 4.8% compared to 2007. The largest increase during the year was recorded in both inbound and outbound international shipments. Despite this increase there were declines in several commodity groups including other basic chemicals (down 0.5Mt), other non-metallic mineral products and machinery (each down 0.4Mt). The port, which is Canada's second largest container shipping facility, handled 1.4 million TEUs, up 9.9%, in 2008. Shipments of containerized cargo, which represented the majority of total international tonnage handled at the port, experienced a gain of 7.7% during the year. This was in contrast to a decline of 3.0% in shipments of non-containerized cargo.

In 2008, total shipments handled at the Port of Québec (including Lévis) saw a marginal increase. Total tonnage handled at the port increased 0.4% to reach 26.8Mt during the year due mainly to higher domestic shipments. The gain was mainly due to increased transshipments<sup>11</sup> of coal coke and petroleum coke (up 1.3Mt). However, this was largely offset by declines in the tonnages of other commodity groups including gasoline and aviation turbine fuel and iron ores and concentrates (each down 0.4Mt), crude petroleum (down 0.3Mt) and cement (down 0.2Mt).

The Port of Saint John, New Brunswick, registered 2.8% decline in the total tonnages to 25.4Mt in 2008. Overall tonnage handled at the port declined due to slight decreases in several commodities including gasoline and aviation turbine fuel (down 0.3Mt), fuel oils (down 0.2Mt) potash and salt (each down 0.1Mt). However, both volume and tonnage of containerized cargo handled at the port rose 2.9% and 13.6%, respectively. The port handled 49,100 TEUs in 2008.

The Port of Sept-Îles (including Pointe-Noire) handled 3.7% more cargo in 2008 compared to 2007. The increase in activity was mainly driven by higher international shipments which were more than enough to offset the declines in the domestic tonnages. Total cargo handled at the port increased 0.8Mt to 22.2Mt during the year following the resolution of a prolonged labour dispute at one of the regions mining companies in 2007. The growth in shipments was led by an increase in the port's primary commodity [iron ores and concentrates (up 0.4Mt)]. Gains were also reported in metallic waste and scrap, coal coke and petroleum coke, alumina and other non-metallic minerals (each up 0.1Mt).

Total tonnage handled at the Port of Hamilton declined 6.1% to 10.8Mt in 2008. Activity at the port is dominated by shipments of iron ore and concentrates. The decline was due mainly to lower domestic inbound shipments of iron ores and concentrates (down 1.3Mt). Other commodity groups to experience declines were metallic waste and scrap (down 0.2Mt), other non-metallic minerals, fuel oils, fertilizers (excluding potash) and gasoline and aviation turbine fuel (each down 0.1Mt).

8. Canadian Port Authorities, created under Canadian Marine Act (1998), were: Belledune, Fraser River, Halifax, Hamilton, Montréal, Nanaimo, North Arm Fraser River, Port Alberni, Prince Rupert, Québec, Saguenay (Chicoutimi), Saint John, Sept-Îles, St. John's, Thunder Bay, Toronto, Trois-Rivières, Vancouver and Windsor Ontario. As of January 2008 Fraser River, North Fraser River and Vancouver were merged to create Vancouver Fraser Port Authority (Port Metro Vancouver).

9. Port Metro Vancouver's data are compared to the sum of individual ports' (viz. Fraser River, North Arm Fraser River and Vancouver) data for 2007.

10. The increase is mainly due to the recovery from the forestry workers' strike in the region during 2007.

11. The cargo that is unloaded at a port and reloaded onto another vessel. It is therefore handled twice by the same port, sometimes after a period of storage.

The decline in total cargo handled at the port of Halifax that started in 2004 continued into 2008. Total tonnage handled at the port fell 14.5% to 10.8Mt during the year as the majority of commodities groups experienced a drop in shipments. Principally responsible for the decrease was a decline in the international outbound shipments of other non-metallic minerals (down 0.9Mt). Both the total volume and tonnage of the container cargo handled at the port continued to trend downward in 2008.<sup>12</sup> The volume of containerized traffic fell 23.1% to 344,000 TEUs and the tonnage dropped 25.6% to 2.9Mt during the year.

After registering a strong growth (37%) in 2007, total cargo handled at the port of Prince Rupert dropped 5.7% to 9.9Mt in 2008. A decrease in outbound shipments of wheat (down 1.5Mt) and coal (down 0.4Mt) to the countries in Asia and the Middle East were the main contributors to the decline. Gains reported in inbound tonnages of several commodities groups were not enough to offset the declines. In addition, 2008 marked the first full year of container handling operations at the port. The port handled almost 180,000 TEUs of containers during the year.

Total cargo handled at the Port of Thunder Bay was 7.9Mt in 2008, down 6.9% compared to the 2007 level. Declines in both domestic and international shipments contributed to the decrease in activities at the port. In particular, the tonnages of grain,<sup>13</sup> the primary commodity group handled at the port, decreased 12.0%. An increase in shipments of coal (up 0.3Mt) was enough to partially offset the declines.

Activities at the Port of Windsor (Ontario) continued to trend downward in 2008 for the second consecutive year. Total tonnage handled at the port decreased 4.7% to 4.6Mt during the year. The decline was attributed mainly to lower inbound international shipments of limestone (down 0.6Mt). Increased shipments of stone, sand, gravel and crushed stone and salt (each up 0.3Mt) were enough to offset considerably the decline in the port's activities.

Total tonnage handled at the port of Trois-Rivières increased 3.7% to over 2.4Mt in 2008. The gain was largely attributed to an increase in shipments of wheat which more than tripled to reach a peak of 0.4Mt, its highest level since 1997. These gains were largely offset by a sharp decline in the shipments of other non-ferrous metal – primary or semi-finished (down 0.2Mt).

The Port of Belledune was busy in 2008. Total cargo handled at the port increased 24.7% to over 2.3Mt. The growth resulted from a rise in the international shipments of coal, other metallic ores and concentrates and stone, sand, gravel and crushed stones (each up 0.2Mt). International cargo represents the majority (93%) of the total cargo handled by the port.

The port of Toronto registered an increase in the total volume of shipments handled in 2008 after two consecutive years of decline. Total tonnage rose 14.6% to reach 2.0Mt during the year on the basis of both higher domestic and international shipments. Activity at the port is dominated by three major commodity groups (sugar, cement and salt), which accounted for the majority of the shipments.

Total tonnage handled at Port Alberni fell 23.9% to 1.2Mt in 2008 after two consecutive years of gains. The decrease was the result of a drop in shipments, both domestically and internationally of the port's principal commodity, logs and other wood in the rough. In particular, international outbound shipments destined for the United States Pacific region were cut by more than half (down 0.2Mt).

Total shipments at the Port of St. John's, Newfoundland and Labrador, decreased 14.8% to 1.2Mt in 2008, due mainly to declines in both international and domestic activities. Decreased total shipments of fuel oils (down 0.1Mt) coupled with lower domestic tonnages of gasoline and aviation turbine fuel (down 0.1Mt) were the main contributors to the decline.

The decline in total cargo handled at the Port of Nanaimo first observed in 2006 continued into 2008, falling 32.6% to 1.0Mt. Both domestic and international shipments contributed to the decrease. The total tonnage handled during the year represented the lowest level of activity at the port in the last 15 years. Most notable were the decreases in tonnages handled of wood chips (down 0.5Mt), the port's principal commodity,<sup>14</sup> and wood pulp (down 0.2Mt).

---

12. Containerized cargo loaded and unloaded at the Port of Halifax, the third largest container handling port of the country, represented more than 40% of the total international tonnage handled at the port in 2008.

13. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains

14. The share of wood chips in total tonnage handled at the port dropped sharply, falling to 27.5% in 2008 from 53.9% in 2007.

The decline was partially offset by an upswing in outbound shipments of lumber to destinations in Asia and logs and other wood in the rough to ports in the United States Pacific region (each up 0.1Mt).

The port of Saguenay handled 12.1% more cargo in 2008 compared to the levels in 2007. The total cargo increased by 37,000 metric tonnes to 342,000 metric tonnes. Increased domestic shipments of salt coupled with higher international outbound tonnages of wood pulp were mainly responsible for the increase.

# Data quality, concepts and methodology

---

## Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).<sup>1</sup> The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

## Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

## Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

---

1. For more information see Coastwise Shipping Survey: [www.statcan.ca/english/sdds/2751.htm](http://www.statcan.ca/english/sdds/2751.htm) and International Freight Origin Destination Survey: [www.statcan.ca/english/sdds/2791.htm](http://www.statcan.ca/english/sdds/2791.htm).

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;
- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

## Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

## Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as “sampling” or “non-sampling” errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

# Appendix I

---

## Glossary

### Terms related to reporting forms

**Advance Commercial Information (ACI):** The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States will be required to be reported using ACI beginning in July 2006.

**A6 General declaration:** This is an administrative document which is submitted along with supporting cargo reports to Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

**S.4 Towboat and ferry operators shipping report:** This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

**S.1 Domestic shipping report:** This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

### Terms related to cargo

**Ballast movement (arrival or departure):** An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

**Commodity:** Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

**Lightering:** This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

**In-transit cargo:** Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

## Terms related to ports

**Destination:** The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

**Origin:** The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

**Handling port:** The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

**Atlantic region:** This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

**Great Lakes region:** This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

**Pacific region:** This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

**St. Lawrence River region:** This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

## Terms related to vessels

**Gross register tonnage:** The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

**Net register tonnage:** The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

**In ballast:** A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

**LO LO:** an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

**RO RO:** An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
