Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Notes: Data in tables may not sum due to rounding.

Charts

1.	Total cargo handled at Canadian ports and marine terminals	16
2.	International cargo handled at Canadian ports and marine terminals	17
3.	Domestic cargo handled at Canadian ports and marine terminals	17

Highlights

- Canadian ports and marine terminals saw their cargo handling activity rebound to 450.0 million metric tonnes (Mt) in 2010 after experiencing the effects of the 2009 international economic recession. This represented a 9.8% increase over the 410.0Mt handled in 2009.
- In 2010, Canadian ports handled 333.6Mt of international cargo, up from 301.8Mt in 2009. The major contributors by tonnage to this increase were shipments of coal (up 11.3Mt), iron ores and concentrates (up 5.4Mt), and potash (up 3.9Mt).
- The total quantity of domestic cargo handled rose to 116.5Mt from 108.2Mt in 2009, led by increases in iron ores and concentrates (up 3.7Mt) and limestone (up 1.8Mt).
- International containerized cargo handled in 2010 at Canadian ports and marine terminals increased both in terms of volume and tonnage compared with the 2009 levels. The volume of containerized cargo reached 4.5 million twenty-foot equivalent units (TEUs) from 3.9 million TEUs, while the tonnage rose to 38.7Mt from 34.8Mt in 2009.
- Canada's marine freight traffic to and from the United States increased to 102.9Mt, a 4.0% increase from 2009. While an improvement over the 2009 recessionary period, the tonnage handled in 2010 was still 13.2% lower than the 118.6Mt moved between Canadian and American ports in the pre-recessionary period of 2008.
- International marine shipments with countries other than the United States rose to 230.7Mt, a 13.7% increase over the 202.8Mt handled in 2009. This represents the highest level of shipments over the last twenty years. The main driver behind this overall growth was outbound cargo shipments (up 21.2Mt), particularly those destined for Asia (up 11.8Mt) and Europe (up 4.5Mt).
- The total cargo handled by the 17 Canadian Port Authorities (CPAs) in 2010 was 268.6Mt, a 14.5% increase from the 234.6Mt handled in 2009. These ports and terminals were responsible for 59.7% of the total marine cargo moved in Canada in 2010, an increase from 54.6% and 57.2% in 2008 and 2009 respectively.
- Canada's busiest port, Port Metro Vancouver, handled 104.7Mt, up 15.9% from the 90.4Mt shipped in 2009. The increase in tonnage represented the largest year-over-year gain of any port in Canada. The top commodities responsible for the increase were coal, up 6.5Mt and potash, up 3.3Mt.
- The port which experienced the largest decline in tonnage in 2010 was Port Hawkesbury with a decrease to 26.3Mt, or 10.5% below the 2009 level of 29.4Mt. This was largely a result of a 2.8Mt or 12.1% reduction in the tonnage of crude petroleum handled at the port.
- The port of Saint John, New Brunswick experienced an increase of 16.0% in its tonnage handled in 2010, to 30.6Mt from 26.4Mt in 2009, mostly attributed to increased shipments of crude petroleum.
- The port of Come-by-Chance handled 27.1Mt in 2010, up 11.2% from the level attained in 2009. The gain was primarily due to the 2.2Mt or 10.8% increase in crude petroleum, the port's dominant commodity.
- Shipping activity at the port of Montréal, including Contrecoeur, increased by 1.0Mt to 24.8Mt from 2009. The growth was attributed to an 8.3% increase in inbound shipments. International containerized cargo also increased 6.1% to 1.2 million TEUs from 1.1 million TEUs.

- The port of Sept-Îles, including Pointe-Noire, saw strong growth in 2010 as total cargo handled reached 24.6Mt, up 4.5Mt from the 2009 level. The gain was due mainly to a rise in the shipments of iron ores and concentrates, all of which were outbound, primarily to ports in Asia or Europe.
- The port of Québec, including Lévis, experienced a gain of 10.4% in tonnage handled, from 22.3Mt in 2009 to 24.6Mt in 2010. Most of the growth was due to international shipments which grew 11.9% over 2009. Increased demand by the steel industry for iron ores and concentrates saw international shipments of this commodity rising 63.8% in 2010 to 3.7Mt from 2.3Mt in 2009.
- Port-Cartier witnessed a 2.0% decline in its cargo handled in 2010 to 17.9Mt from 18.3Mt in 2009. Principally responsible for this decline was a drop of 1.9Mt in international departures of iron ores and concentrates which was not fully offset by the 1.7Mt increase in domestic departures of this same commodity.
- Shipping activity at the port of Prince Rupert rose 33.2% to 15.0Mt over the 2009 level of 11.3Mt. These gains were largely driven by increased shipments of coal, up 95.6% to 6.5Mt, and coal coke and petroleum coke, up 85.1% to 1.1Mt. Offsetting these increases was a decline of 26.3% to 3.4Mt in shipments of wheat.

Shipping in Canada 2010 (preliminary)

In 2010 the Canadian economy began a nascent recovery from the effects of the global economic slowdown it experienced in 2009. Based on significant increases in both exports and imports, real gross domestic product increased 3.2%, following the 2.8% decline in 2009¹. In 2010, the nominal value of total merchandise trade increased 10.1% to \$818.7 billion. While both exports and imports were higher than their levels in 2009, Canada experienced a widening of the balance of trade deficit to \$9.0 billion from a deficit of \$4.7 billion in 2009². This occurred as a result of the 10.6% growth in imports exceeding the 9.6% rise in exports.

The recovery from the 2009 recession had a positive effect on Canada's marine activity. The total cargo handled at Canada's ports and marine terminals increased to 450.0 million metric tonnes (Mt) in 2010 up 9.8% over the 2009 level. This healthy growth in Canada's marine shipping activity was the largest year-over-year increase in the last twenty years³. The growth in 2010 was the result of strong increases in both international and domestic⁴ cargo shipments.

International Marine Traffic

The growth in global trade in 2010, following the 2009 economic recession, resulted in a substantial 10.5% increase in the tonnage of international cargo (movements between Canadian and foreign ports) handled in Canada. Shipments of international cargo reached 333.6Mt, up from the levels recorded in 2008 and 2009.

Significant gains were noted in outbound shipments of coal (up 38.5% to 38.7Mt), primarily to Asia. In addition, the tonnage of both inbound and outbound movements of iron ores and concentrates grew in 2010, resulting in an overall increase of 14.1% to 43.5Mt. Most of the growth in the tonnage of iron ores and concentrates is attributed to cargo arrivals, which rose 65.1% to 8.8Mt in 2010. The majority of the gains were due to shipments from the United States Great Lakes ports. Outbound shipments of this commodity grew 5.8% to 34.7Mt with ports in Europe (15.2Mt) and Asia (10.4Mt) the recipients of most of these departures.

Container Traffic

International container traffic at Canadian ports rebounded from the declines observed in 2009 as gains were reported for both volumes and tonnage. International container volumes increased by 15.2% to 4.5 million twenty foot equivalent units (TEUs) from 3.9 million in 2009, while the tonnage rose 11.2% to 38.7Mt from 34.8Mt. The growth was driven primarily by an increase in inbound shipments from Asia, as well as shipments both inbound from and outbound to Europe.

The majority of the growth in international container traffic in 2010 was concentrated in the country's four primary container ports. These are Port Metro Vancouver; the port of Montréal, including Contrecoeur; the port of Halifax; and the port of Prince Rupert.

1. Statistics Canada, CANSIM 380-0002.

2. Statistics Canada, CANSIM 228-0003.

3. Comparative analysis based on data taken from various issues of Shipping in Canada, Statistics Canada catalogue 54-205-X.

4. Note that domestic cargo is handled twice by the Canadian ports and marine terminal system, once when loaded and again when unloaded.

Canada – United States Cargo

Canada's marine traffic to and from the United States rose 4.0% in 2010 to 102.9Mt from 98.9Mt in 2009, reversing four years of declines. The growth in 2010 was driven by gains in shipments of both inbound (up 9.7%) and outbound (up 1.4%) freight.

The increase in inbound shipments was due exclusively to a substantial increase (up 19.8%) in cargo arriving in Canada from the United States Great Lakes ports. The tonnages of several commodities from this region grew strongly in 2010. These included iron ores and concentrates (from 4.9Mt to 7.8Mt); coal (from 8.8Mt to 9.8Mt); and limestone (from 2.1Mt to 2.7Mt).

Shipments of marine cargo from Canada destined for ports in the United States grew by a slight 1.4% or 0.9Mt in 2010. The growth was largely attributed to a rise in outbound shipments to ports located in the United States Atlantic and Gulf Region which handled the majority (66.1%) of Canadian marine freight shipments to the United States. Substantial gains were recorded in shipments of fuel oils (up 1.2Mt or 15.0%), iron ores and concentrates (up 0.9Mt or 114.1%), and gasoline and aviation turbine fuel (up 0.6Mt or 10.0%) to this region. However, these gains were almost entirely offset by declines in the shipment of salt (down 1.8Mt or 35.6%) to the ports of the United States Great Lakes Region.

In 2010, ships registered in Canada handled 38.6% of the marine traffic between Canada and the United States, a small decline from the 39.1% handled in 2009. Canadian-flagged vessels continued to be very prominent in the shipments of cargo between Canada and ports in the United States Great Lakes Region where they handled 86.3% of the activity, down from 89.3% in 2009. On the Pacific coast of the United States, Canadian-registered vessels moved 23.9% of the tonnage in 2010, a drop from 26.9% in 2009. In 2010, Canadian-registered vessels were responsible for only 6.6% of marine traffic with United States Atlantic and Gulf ports, off from 7.7% in 2009.

Canada Overseas Cargo

International marine tonnage handled between Canada and countries other than the United States increased 13.7% to 230.7Mt in 2010 from 202.8Mt in 2009. Both outbound and inbound shipments contributed to the increase.

International marine cargo destined for countries other than the United States was dominated by shipments to Asia (up 11.8Mt or 16.3%), which accounted for over half of the outbound cargo. Other regions which reported notable gains included Europe (up 4.5Mt or 14.4%), South America (up 3.6Mt or 57.1%), and Central America and Antilles (up 2.2Mt or 39.4%).

Several commodities were primarily responsible for the increase in international departures in 2010. These included shipments of coal (up 10.1Mt or 37.0%), potash (up 3.9Mt or 157.5%), logs and other wood in the rough (up 2.0Mt or 91.1%), and lumber (up 1.4Mt or 43.2%).

The tonnage of international cargo arriving in Canada from countries other than the United States increased in 2010, from 73.1Mt in 2009 to 79.8Mt. Most notable were shipments from Asia and South America, each up 2.2Mt. Gains in inbound cargo were also recorded from Africa (up 1.7Mt); and the Middle East (up 1.3Mt). These increases were partially offset by declines from ports in Europe, and Central America and Antilles, (each down 0.3Mt); and Oceania, (down 0.2Mt).

Vessels registered in Canada continued to carry a very small proportion of the marine cargo moved between Canadian and international (excluding the United States) ports in 2010. Canadian-flagged vessels accounted for only 0.2% of the international tonnage handled, compared with vessels registered in Panama (26.6%), Liberia (10.7%), Hong Kong (9.5%) and Greece (7.9%).

Domestic Cargo

In 2010, the tonnage of domestic cargo handled at Canadian ports and marine terminals rebounded to 116.5Mt over the 108.2Mt handled in 2009. There were several commodities which accounted for the majority of the tonnage

increase experienced in 2010. These included shipments of iron ores and concentrates (up 3.7Mt), limestone (up 1.8Mt), other metallic ores and concentrates (up 1.2Mt) and coal (up 1.0Mt). These gains were partially offset by declines in shipments of salt (down 2.5Mt) and wheat (down 1.0Mt). In addition, crude petroleum, the commodity responsible for the largest domestic tonnage handled, was essentially flat in 2010, up only 0.4Mt over 2009.

All regions of Canada experienced an increase in the tonnage of domestic cargo handled in 2010 with variances occurring by region and commodity.

The Atlantic Region saw a modest 1.2% or 0.5Mt annual growth, aided by a substantial 126.0% or 0.6Mt rise in its movements of limestone. Countering this growth was a decline in salt shipments of 31.1% or 0.8Mt.

The St. Lawrence Region experienced the largest growth in shipments of domestic cargo in 2010, up 20.4% or 4.4Mt over 2009. This region reported an increase of 161.5% or 2.6Mt in the tonnage of iron ores and concentrates handled. Also rising significantly in 2010 were shipments of other metallic ores and concentrates (up 25.6% or 1.2Mt). This region realized a decline in shipments of salt, down 32.5% or 0.8Mt, and wheat, off 12.9% or 0.5Mt, over 2009.

In 2010, tonnages handled in the Great Lakes Region grew 2.0Mt (up 7.4%), augmented by an increase of 1.1Mt (up 62.4%) in the shipments of iron ores and concentrates. The level of limestone shipped also rose by 0.5Mt (up 14.8%). However, as was observed in other regions of Canada, declines were noted in 2010 in the shipments of salt. This region saw a drop of 0.9Mt (down 23.5%) in salt shipments. Tonnages handled of wheat also were lower in 2010, down 0.4Mt (down 9.1%).

The Pacific Region experienced a growth of 6.2% in shipments in 2010, aided by a substantial 633.8% growth in the coal shipments, up 0.8Mt to 0.9Mt. In addition, the tonnage handled of logs and other wood in the rough grew 10.5% or 0.6Mt.

Port Authorities

The total cargo handled by the 17 Canadian Port Authorities⁵ (CPAs) rose to 268.6Mt in 2010 from 234.6Mt in 2009. In addition, their share of the total cargo handled increased to 59.7% in 2010 from 57.2% in 2009. This is the third consecutive year that this share has risen.

Port Metro Vancouver, Canada's largest port by tonnage handled, experienced strong growth as shipments rose 15.9% to 104.7Mt in 2010. The overall gain in shipments was led by a sharp increase in international shipping activity, up 17.1% from 2009 to 94.3Mt in 2010. Domestic activity also rose 6.3% to 10.4Mt. The port's overall growth in tonnage was primarily driven by increases in four commodities. These were coal (up 6.5Mt or 27.2%); potash (up 3.3Mt or 141.8%); logs and other wood in the rough (up 1.1Mt or 29.8%); and lumber (up 0.9Mt or 31.4%).

The port remains Canada's leading container facility⁶ and in 2010 saw gains in both its volume and tonnage of international containerized cargo. The container volume rose to 2.5 million TEUs from 2.2 million TEUs in 2009. During the same period the tonnage of containerized cargo increased 8.9% to 20.7Mt in 2010 from 19.0Mt in 2009. This rise in tonnage handled was entirely attributed to the shipments of inbound cargo as outbound shipments dropped 0.2% from the levels recorded in 2009.

In 2010, the port of Saint John, New Brunswick experienced a healthy 16.0% increase in tonnage handled over the 2009 level, rising 4.2Mt to 30.6Mt. This growth was split almost equally between inbound (up 16.3%) and outbound (up 15.7%) shipments. After remaining relatively stable for the previous three years, shipments of the port's primary commodity, crude petroleum, rose 11.1% to 14.7Mt in 2010. Other commodities which registered gains were other refined petroleum and coal products, up 58.3% to 2.7Mt. In addition, shipments of potash increased by over 300% to reach 0.8Mt in 2010 after falling to 0.2Mt in 2009. The volume of international containerized cargo rose 6.4% to 47,013 TEUs and the associated tonnage handled increased 5.1% to 0.3Mt.

5. Canadian Port Authorities created under the Canada Marine Act (1998) were: Belledune, Fraser River, Halifax, Hamilton, Montréal, Nanaimo, North Fraser River, Port Alberni, Prince Rupert, Québec, Saguenay(Chicoutimi), Saint John, Sept-Îles, St. John's, Toronto, Thunder Bay, Trois-Rivières, Vancouver and Windsor Ontario. As of January 2008, Fraser River, North Fraser River and Vancouver were merged to create Vancouver Fraser Port Authority (Port Metro Vancouver).

6. Port Metro Vancouver handled 55.6% of all containers in Canada in 2010.

The port of Montréal, including Contrecoeur, handled 24.8Mt in 2010, an increase of 4.2% from the levels in 2009. Cargo arrivals at the port rose 8.3% while departures declined 0.8%. The volume of international containerized cargo also grew in 2010, rising 6.1% to 1,212,354 TEUs. Furthermore, the tonnage of international containerized cargo rose by 7.2% to 11.7Mt from 2009 levels, and now accounts for almost half of the tonnage handled at the port.

In 2010, the port of Sept-Îles, including Pointe-Noire, realized a substantial 22.6% gain in the tonnage of cargo handled (to 24.6Mt) as activity at the port recovered from the 2009 slump. Almost all of the increase was attributable to a 24.5% rise in shipments of iron ores and concentrates, which rose from 17.3Mt in 2009 to 21.6Mt. This commodity was primarily shipped to ports in Asia or Europe. In 2010, outbound shipments of iron ores and concentrates were responsible for 87.6% of the total tonnage of cargo that passed through this port.

Total cargo handled at the port of Québec, including Lévis, in 2010 grew to 24.6Mt, a gain of 10.4% over 2009. Responsible for the rise in shipments was the sharp increase (up 63.8%) in the tonnage of iron ores and concentrates, up to 3.7Mt in 2010 from 2.3Mt in 2009. Inbound shipments of this commodity from ports in the United States Great Lakes Region and those in South America were primarily responsible for the increase in tonnage handled.

In 2010, the port of Prince Rupert handled 15.0Mt of cargo, up 33.2% from 11.3Mt in 2009. For the past two years the overall level of shipping activity at the port was driven primarily by the tonnages of coal and wheat handled. In 2010, shipments of coal increased 3.3Mt to 6.5Mt. However, the growth in coal shipments was dampened by a decline in shipments of wheat to 3.4Mt from 4.6Mt in 2009. The majority of the outbound coal was destined for ports in Asia whose shipments grew in 2010 to 5.8Mt from 2.9Mt the previous year. In 2010, the tonnage of international containerized cargo handled at the port rose 37.2% to 2.5Mt while the number of TEUs reached 341,979, up from 264,714 in 2009.

The tonnage of cargo handled at the port of Hamilton in 2010 rose sharply by 38.8% to 11.4Mt. Primarily responsible for the gain was an increase of 80.5% in the shipments of domestic cargo, which reached 5.2Mt. Activity at the port was heavily influenced by the improvement in the steel market. The industry experienced dramatic growth following the severe economic downturn in 2009. Iron ores and concentrates, and coal are the primary commodities handled by the port with the former up 38.7% to 5.1Mt and the latter rising 32.4% to 2.8Mt in 2010.

The tonnage handled at the port of Halifax in 2010 was virtually unchanged (down 0.2% to 10.2Mt) from 2009 levels. Increases in outbound shipments (up 9.5% or 0.5Mt) were completely offset by declines (down 9.1% or 0.5Mt) in inbound cargo. The port experienced sharp declines in both crude petroleum (down 0.5Mt) and other non-metallic minerals (down 0.4Mt). Partially countering these declines were increases in shipments of newsprint (up 0.2Mt) and fuel oils (up 0.1Mt). In 2010, there were increases in both the volume and tonnage of international containerized cargo handled by the port. International containerized volumes were up 24.7% from 314,599 TEUs in 2009 to 392,328 TEUs.

The port of Thunder Bay experienced a decline of 6.4% to 6.8Mt in the tonnage of cargo handled in 2010. This represents the third consecutive year that tonnage has decreased at the port. Principally responsible for the drop were lower outbound domestic shipments of wheat (down 0.7Mt).

The tonnage handled at the port of Windsor, Ontario increased 12.5% to 5.3Mt in 2010. The growth in shipping activity resulted from higher international inbound shipments of limestone, which more than doubled to 1.1Mt, from 0.5Mt in 2009.

Shipping activity at the port of Trois-Rivières in 2010 showed an increase of 18.2% from the previous year, reaching 2.9Mt. Over half of this increase was attributed to shipments of corn, which rose to 239,533 tonnes in 2010 from 6,600 tonnes in 2009.

After two years of gains, shipments at the port of Belledune fell to 2.1Mt in 2010 from 2.6Mt in 2009. Both international and domestic shipments contributed to the decline. Domestic activity at the port was negatively impacted by the sharp drop (down 87.5%) in shipments of other non-metallic mineral products. In addition, international shipments of coal declined 14.0%.

Cargo handled at the port of Toronto dropped to 1.5Mt in 2010 from 1.6Mt in 2009, a decline of 8.3%. This was due to a 0.3Mt reduction in international cargo handled at the port which was not offset by the 0.2Mt increase in domestic

shipments. The tonnage of salt handled decreased 37.6%, from 0.6Mt to 0.4Mt, due to reduced demand resulting from a mild winter.

Marine activity at the port of St. John's, Newfoundland and Labrador experienced a 3.5% growth as tonnage handled in 2010 rose to 1.5Mt. This increase was entirely attributed to a 65,499 tonne growth in domestic shipments handled as international shipments declined 16,564 tonnes over their level in 2009.

In 2010, the port of Nanaimo experienced a strong gain (up 71.9% to 1.3Mt) in its tonnage handled over the 2009 level. This was a reversal of the declines observed over the previous four years. The growth was largely due to international departures which rose 210.7% and represented the majority (83.1%) of the total tonnage handled at this port in 2010. International shipments of logs and other wood in the rough increased 527.2% over 2009 to 0.7Mt from 0.1Mt. About 90% of the tonnage of logs and other wood in the rough handled at the port were destined for ports in Asia.

Port Alberni handled virtually the same tonnage in 2010 as in 2009, down just 1.3% or 13,448 tonnes to 1,042,590 tonnes. During this period, domestic shipments declined by 231,664 tonnes while international tonnage handled increased by 218,217 tonnes. The port saw growth of 46,988 tonnes to 105,479 tonnes in lumber, and a decline of 61,071 tonnes to 926,036 tonnes in logs and other wood in the rough. While the tonnage handled of logs and other wood in the rough declined slightly there was a substantial 92.0% growth to 434,175 tonnes in the tonnage of this commodity departing for Asia in 2010. Further, there was a 79.8% increase in the tonnage of lumber destined for Asia, which in 2010 received the bulk (99.6%) of all the lumber handled at this port.

The port of Saguenay experienced an increase of 27.0% to 383,303 tonnes in cargo handled over 2009. The rise in marine activity was driven entirely by international shipments, which rose 42.4%. With the exception of wood pulp, which remained virtually unchanged, shipments of the port's principal commodities reported gains. These included other non-ferrous metal – primary or semi-finished (up 20,142 tonnes), other non-metallic minerals (up 14,894 tonnes), other basic chemicals (up 14,755 tonnes), and coal (up 12,668 tonnes).

Data quality, concepts and methodology

Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).¹ The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

1. For more information see Coastwise Shipping Survey: www.statcan.ca/english/sdds/2751.htm and International Freight Origin Destination Survey: www.statcan.ca/english/sdds/2791.htm.

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing of log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

Appendix I

Glossary

Terms related to reporting forms

Advance Commercial Information (ACI): The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States was required to be reported using ACI beginning in July 2006.

A6 General declaration: This is an administrative document which is submitted along with supporting cargo reports to the Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

S.4 Towboat and ferry operators shipping report: This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

S.1 Domestic shipping report: This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

Terms related to cargo

Ballast movement (arrival or departure): An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

Commodity: Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

Lightering: This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

In-transit cargo: Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

Terms related to ports

Destination: The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

Origin: The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

Handling port: The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

Atlantic region: This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

Great Lakes region: This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

Pacific region: This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

St. Lawrence River region: This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

Terms related to vessels

Gross register tonnage: The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

Net register tonnage: The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

In ballast: A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

LO LO: an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

RO RO: An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
