# Highlights

- Fuelled by higher gasoline prices and mortgage interest cost, consumer prices increased 2.5% between November 2006 and November 2007, this represents a slight acceleration from the 12-month change of 2.4% posted in October. However, the Bank of Canada's core index increased only 1.6%, posting its slowest 12-month increase since April 2006.

**Chart 1**

Source(s): CANSIM table number 326-0020.

## Analysis

---

Fuelled by higher gasoline prices and mortgage interest cost, consumer prices increased 2.5% between November 2006 and November 2007, this represents a slight acceleration from the 12-month change of 2.4% posted in October. However, the Bank of Canada's core index increased only 1.6%, posting its slowest 12-month increase since April 2006.

The gap between the rate of growth in the all-items CPI and the core index is attributable to gasoline and mortgage interest cost, two components that pushed up the all-items CPI but which are not accounted for in the core measure. Excluding gasoline, the all-items index increased 1.7% between November 2006 and November 2007.

The Bank of Canada's core index, used to monitor the inflation control target, rose only 1.6%, its slowest 12-month increase since April 2006. The core index has slowed since July this year. The 12-month change was 2.0% in September, and 1.8% in October.

On a seasonally adjusted basis, consumer prices were up 0.4% in October over November 2007, while the seasonally adjusted core index remained unchanged during that period.

Unadjusted, consumer prices were 0.3% higher in November compared to October 2007, after declining 0.3% during the previous month. This reversal was mainly due to the movement in gasoline prices, which increased 4.0% between October and November following a 3.3% decline during the previous month.

The core index remained unchanged between October and November following a 0.2% decline between September and October.

### **Twelve-month change: rising consumer prices driven by a 17.6% increase in the price of gasoline**

The 2.5% growth rate in consumer prices was mainly driven by the 17.6% year-over-year increase in the price of gasoline in November 2007. This was the most significant annual growth on record since May 2006 when gasoline prices rose 18.6%.

Gasoline has been the dominant factor in the annual growth of the all-items index since September. This growth was partially due to a drop in prices around this time last year and a 4.0% increase in gasoline prices between October and November 2007. The month-to-month increase partly reflects to some extent the surge in the price of crude oil on the global market.

**Chart 1**  
**Evolution of the gasoline price index, Canada**

Source(s): CANSIM table number 326-0020.

Costs associated with owned accommodation (+5.1%) once again played an important role in the rise of the all-items index over the 12 months proceeding November 2007. The owned accommodation index measures the change in the cost of using an owner-occupied dwelling. The two main components of the owned accommodation index are: the cost of financing the purchase of a house—mortgage interest cost index—and the cost of maintaining the housing structure from wear and tear—homeowner’s replacement cost index.

The mortgage interest cost index advanced 7.0% during this period, up from the 6.7% growth posted in October. The 4.9% annual increase in homeowners’ replacement cost also contributed to the rise in costs for owned accommodation. The pace of growth of this component continued to slow in line with changes in new housing prices.

Canadians paid 2.4% more for restaurant meals compared to the same month last year. Although this item is a major contributor to growth in consumer prices, the increase is the most moderate since June 2007.

A 3.9% drop in vehicle purchase and lease prices was the main factor mitigating the increase in consumer prices. November was marked by the introduction of 2008 models and the fact that manufacturers continued to offer rebates on many new 2008 models. This was the largest 12-month decrease on record.

Prices for fresh vegetables fell 11.1% on the heels of a 14.6% drop in October. The combined effect of lower prices for tomatoes (-24.2%) and potatoes (-14.2%) has brought significant downward pressure to bear on this component.

Canadians also enjoyed lower prices for fresh fruits (-6.2%). Reduced prices for oranges were the main underlying sources of this decline.

Prices for computer equipment and supplies continued to fall in November (-14.9%). Cheaper parts supported by technological advances and market competition all contributed to a decline in this component.

## Consumer price growth cools in Alberta

Gasoline prices were the main contributor to CPI growth in all provinces except Saskatchewan and Alberta, where they were second to owned accommodation costs.

The year-over-year growth in the price of gasoline increased in November in all provinces. This acceleration was especially steep in Nova Scotia where growth of gasoline prices went from 12.2% in October to 19.6% in November.

**Chart 2**

**Percentage change in gasoline from the same month of the previous year, Canada and provinces**

Source(s): CANSIM table number 326-0020.

Between November 2006 and November 2007, consumer prices increased at rates faster than the national average in five provinces: Prince Edward Island (+2.9%), Nova Scotia (+2.8%), New Brunswick (+3.2%), Saskatchewan (+4.0%) and Alberta (+4.7%).

The growth in consumer prices slowed in Alberta, where the 12-month increase in November was 4.7% compared with 5.0% in October. This was due mainly to movement of the natural gas prices, which fell 3.2% in November after increasing 16.0% in October.

## Monthly change: gasoline reverses the change in the all-items index

On an unadjusted basis, consumer prices were up 0.3% between October and November 2007 following a 0.3% decline the previous month. This reversal stems mainly from changes in gasoline prices, which rebounded by 4.0% on a monthly basis after dropping 3.3% between September and October. The monthly rise posted in November, which occurs at a time when crude oil prices on the world market are at record levels, is the most significant reported since May 2007.

Mortgage interest cost (+0.8%) also contributed to growth in the all-items index. This component has continued to grow at a monthly rate of between 0.7% and 0.8% since July 2007. Mortgage loan renewals at higher rates contributed to the growth in this component almost as much as increasing new housing prices.

**Chart 3**  
**Percentage change in mortgage interest cost from the previous month, Canada**

percentage change

Source(s): CANSIM table number 326-0020.

The price of bakery products increased by 3.8% as world wheat prices held at record levels, reflecting the lowest production levels in the past 25 years and a drought affecting wheat production in Australia.

Canadians paid 4.5% more for fresh vegetables in November compared to October 2007.

A 3.1% jump in the cost of travel by bus or subway also exerted upward pressure on Canadians' transportation expenditures. This is the sharpest rise since June 1996, and was due to increased public transit rates in Ontario.

With the onset of winter, the price of fuel oil and other fuels grew by 4.7%, the steepest rise in this item since September 2005 when hurricane Katrina affected the petroleum industry.

The impact of these increases was partly offset by traveller accommodation, which fell 5.5%. Monthly decreases are frequent between October and November. Decreases were especially marked in high tourism areas. A slowdown of the same magnitude (-6.6%) also occurred from October to November 2006.

The decline in prices for electricity (-1.6%) also exerted significant downward pressure on the all-items index. The decrease in electricity prices occurred mainly in Ontario, where the winter rate schedule took effect on November 1<sup>st</sup>. Ontario enjoyed a lower rate on their first 1 000 kWh/month of consumption, whereas this lower rate applied to the first 600 kWh/month in October.

A drop in the price of natural gas (-2.9%) also moderated growth in consumer prices. This decrease was recorded as mild weather contributed to low demand and stocks were high.

Women's clothing was down 1.3% as retailers began discounting winter apparel.

**Year-over-year growth in the core index continued its slowdown which began in July 2007**

The Bank of Canada's core index grew by 1.6% in November 2007 compared to November 2006, less than the 1.8% growth rate recorded the previous month. This slowdown is mainly due to a decline in vehicle purchase and lease prices (-3.9%). The growth posted in November is the lowest recorded since April 2006.

The core index is obtained by removing the effect of the changes in indirect taxes from the all-items CPI from which the eight most volatile components identified by the Bank of Canada have been excluded. These volatile components are fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; heating oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies.

From October to November 2007, the unadjusted core index remained unchanged compared to a 0.2% decrease the previous month.

### **The combined increases in all energy components push the energy price index to its highest level since July 2006**

The energy product price index grew by 10.3% over the 12-month period prior to November 2007, outpacing the 8.6% growth rate in the previous period. This is the highest growth of this index since July 2006 and is the combined effect of growth in all energy components. The price of gasoline, up 17.6% during the period, exerted the strongest upward pressure. In order of importance, the other components that contributed to the increase were heating oil and other fuels (+20.2%); electricity (+1.0%); fuel, parts and supplies for recreational vehicles (+10.9%); and natural gas (+0.6%).

The energy index increased by 1.5% between October and November 2007 following a 1.5% drop the previous month. This reversal was mainly due to the change in the price of gasoline, which increased 4.0% from October to November after falling 3.3% the previous month. The other components exerting strong upward pressure were fuel oil and other fuels (+4.7%), and fuel, parts and supplies for recreational vehicles (+2.6%). Lower electricity (-1.6%) and natural gas (-2.9%) prices only partially offset the upward pressure from other components on the energy index.

### **Gasoline pushes up non-durable good index while passenger vehicles push down the durable good index**

The unadjusted goods index was up 1.4% in the 12 months leading to November 2007, identical to the rate posted in October.

Non-durable goods (+3.8%) exerted the strongest upward pressure on the goods index. The strongest increase in this component observed since July 2006 was mainly the result of rising energy component prices over the period. In order of importance, those components that contributed most significantly to the increase in the price of non-durable goods were gasoline (+17.6%), heating oil and other fuels (+20.2%) and electricity (+1.0%). The increase in the non-durable goods index was offset in part by the decline in the price of fresh vegetables (-11.1%).

The durable goods index fell 3.0%, the largest decline since its inception. This drop was mainly due to lower prices for vehicle purchases (-3.8%), computer equipment and supplies (-14.9%) and tools and other household equipment (-4.4%).

Higher prices for semi-durable goods (+0.2%) also contributed, although to a lesser extent, to higher prices of goods. Growth in prices for books and other printed matter (excluding textbooks) (+3.3%) was the primary source of this increase. The impact of this component was partially offset by lower prices for clothing (-1.3%).

The goods index rose 0.5% from October to November 2007, mainly due to higher prices for non-durable goods (+0.9%). The month-over-month increase in non-durable goods was itself supported by the increased price of gasoline (+4.0%). During the same period, prices for semi-durable goods decreased (-0.6%) and prices for durable goods remained stable (0.0%).

The price of services was up 3.4% between November 2006 and November 2007. This is the slowest growth rate recorded since June 2007 and was primarily due to the rise in mortgage interest cost (+7.0%) and homeowners' replacement cost (+4.9%). Growth was partially offset by lower prices for vehicle leases (-3.9%).

Unadjusted service prices rose by 0.1% between October and November 2007. The rate of growth of this index has slowed since September 2007. The most significant upward pressure on this index came from mortgage interest

cost (+0.8%). However, lower prices for traveller accommodation (-5.5%) was a major contributor to the monthly slowdown of that index.

### Seasonally adjusted CPI up 0.4% between October and November

On a seasonally adjusted basis, the all-items CPI advanced by 0.4% between October and November 2007, up from the 0.0% recorded last month. The November increase was mainly attributable to transportation (+1.3%) and, to a lesser extent, to clothing and footwear (+0.6%).

In contrast to the All-items, the seasonally adjusted core index reported no change between October and November 2007.

**Table 11**  
**Average retail prices, monthly, Canada**

	CANSIM vector number	September 2007	October 2007	November 2007
dollars <sup>1</sup>				
Round steak, 1 kilogram	(v735165)	11.90	11.99	11.75
Sirloin steak, 1 kilogram	(v735176)	15.31	15.22	14.61
Prime rib roast, 1 kilogram	(v735187)	20.62	19.74	20.60
Blade roast, 1 kilogram	(v735198)	9.05	9.09	8.70
Stewing beef, 1 kilogram	(v735209)	9.12	9.30	9.06
Ground beef, regular, 1 kilogram	(v735220)	5.98	6.07	5.98
Pork chops, 1 kilogram	(v735221)	9.49	9.36	9.16
Chicken, 1 kilogram	(v735223)	5.65	5.70	5.72
Bacon, 500 grams	(v735166)	4.70	4.58	4.59
Wieners, 450 grams	(v735167)	2.70	2.65	2.69
Canned sockeye salmon, 213 grams	(v735168)	3.18	3.30	3.22
Homogenized milk, 1 litre	(v735169)	1.97	1.96	1.98
Partly skimmed milk, 1 litre	(v735170)	1.88	1.86	1.88
Butter, 454 grams	(v735171)	4.12	4.12	4.10
Processed cheese food slices, 250 grams	(v735172)	2.79	2.79	2.75
Evaporated milk, 385 millilitres	(v735173)	1.59	1.54	1.55
Eggs, 1 dozen	(v735174)	2.46	2.47	2.46
Bread, 675 grams	(v735175)	2.06	2.07	2.16
Soda crackers, 450 grams	(v735177)	2.10	2.08	2.12
Macaroni, 500 grams	(v735178)	1.02	1.08	1.11
Flour, 2.5 kilograms	(v735179)	3.54	3.42	3.48
Corn flakes, 675 grams	(v735180)	3.85	3.85	3.86
Apples, 1 kilogram	(v735181)	3.07	2.83	2.78
Bananas, 1 kilogram	(v735182)	1.19	1.19	1.17
Grapefruits, 1 kilogram	(v735183)	2.78	2.87	2.46
Oranges, 1 kilogram	(v735184)	2.74	2.83	2.60
Apple juice, canned, 1.36 litres	(v735185)	1.69	1.75	1.73
Orange juice, tetra-brick, 1 litre	(v735186)	3.65	3.64	3.62
Carrots, 1 kilogram	(v735189)	1.40	1.31	1.18
Celery, 1 kilogram	(v735190)	1.38	1.48	1.68
Mushrooms, 1 kilogram	(v735191)	7.05	7.02	6.68
Onions, 1 kilogram	(v735192)	1.46	1.26	1.12
Potatoes, 4.54 kilograms	(v735193)	4.30	4.04	3.64
French fried potatoes, frozen, 1 kilogram	(v735194)	2.02	1.99	2.01
Baked beans, canned, 398 millilitres	(v735195)	0.90	0.89	0.90
Tomatoes, canned, 796 millilitres	(v735196)	1.29	1.29	1.27
Tomato juice, canned, 1.36 litres	(v735197)	1.59	1.54	1.54
Ketchup, 1 litre	(v735199)	2.63	2.63	2.63
Sugar, white, 2 kilograms	(v735200)	2.34	2.37	2.34
Coffee, roasted, 300 grams	(v735201)	3.68	3.73	3.66
Coffee, instant, 200 grams	(v735202)	4.80	4.74	4.81
Tea (72 bags)	(v735203)	3.72	3.75	3.75
Cooking or salad oil, 1 litre	(v735204)	3.48	3.48	3.48
Soup, canned, 284 millilitres	(v735205)	0.87	0.88	0.90
Baby food, 128 millilitres	(v735206)	0.61	0.60	0.60
Peanut butter, 500 grams	(v735207)	2.47	2.55	2.52
Fruit flavoured crystals, 2.25 litres	(v735208)	1.24	1.24	1.24
Soft drinks, cola type, 2 litres	(v735210)	1.44	1.38	1.39
Soft drinks, lemon-lime type, 2 litres	(v735211)	1.43	1.42	1.45
Paper towels (2 rolls)	(v735213)	2.25	2.30	2.30
Facial tissue (200 tissues)	(v735214)	1.95	1.96	1.98
Bathroom tissue (4 rolls)	(v735215)	2.15	2.14	2.16
Shampoo, 300 millilitres	(v735216)	3.14	3.04	3.14
Deodorant, 60 grams	(v735217)	3.29	3.37	3.38
Toothpaste, 100 millilitres	(v735218)	1.34	1.29	1.34
Cigarettes (200)	(v735219)	78.04	77.78	77.53
Regular, unleaded gasoline at self-service stations, cents per litre	(v41838376)	101.9	98.0	102.4

# Data quality, concepts and methodology

---

## Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

## Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

## Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

## Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

## Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

## Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Prices Division.

Text table 1

### Comparison of the 2005 and 2001 distribution<sup>1</sup> of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
<b>Major Components</b>			
<b>All-Items</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

## Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

## Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

## Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

## Explanatory notes for tables

---

### Table 1 The Consumer Price Index, major components, Canada

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

### Table 2 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit

1. Not seasonally adjusted.
2. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

### Table 3 The Consumer Price Index, major components and selected sub-groups, Canada

#### Table 3-1

1. Not seasonally adjusted.
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

#### Table 3-2

1. Not seasonally adjusted.
2. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: [prices-prix@statcan.ca](mailto:prices-prix@statcan.ca).

#### Tables 3-3 to 3-6 and 3-8

1. Not seasonally adjusted.

**Table 3-7**

1. Not seasonally adjusted.
2. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

**Table 3-9**

1. Not seasonally adjusted.
2. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
3. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
4. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

**Table 4 The Consumer Price Index for Canada, all-items, historical data**

1. Not seasonally adjusted.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 4 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 4.

**Table 5 The Consumer Price Index for Canada, major components and special aggregates, historical data**

1. Not seasonally adjusted.
2. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.

3. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
4. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
5. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

### **Table 6 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife**

#### **Tables 6-1 to 6-5 and 6-7 to 6-11**

1. Not seasonally adjusted.
2. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
3. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

#### **Table 6-6**

1. Not seasonally adjusted.
2. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
3. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
4. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: [prices-prix@statcan.ca](mailto:prices-prix@statcan.ca).

#### **Table 6-12**

1. Not seasonally adjusted.
2. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

3. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
4. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.

### **Table 7 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, historical data**

1. Not seasonally adjusted.
2. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
3. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

### **Table 8 The Consumer Price Index and selected sub-groups, by urban centre and**

### **Table 9 The all-items Consumer Price Index by urban centre, historical data**

1. Not seasonally adjusted.
2. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
3. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.

## Table 11 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

### Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 11 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

## Table 12 Inter-city indexes of retail price differentials, as of October 2006, for selected groups of consumer goods and services

Table 12 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of goods and services at the specified point in time.

Price data for the current inter-city retail price comparison table was drawn to a large extent from the price information collected for the production of the Consumer Price Index (CPI) for October 2006<sup>(3)</sup>. Statistics Canada collects prices as part of the regular monthly CPI survey for the purpose of measuring price change through time. The number of prices collected is sufficient for this purpose at current levels of publication. The CPI sample was not selected for the purpose of calculating average price levels and comparing them across regions. No attempt is made to ensure that the products selected for the purpose of calculating the CPI are comparable across regions. As a result, the number of price quotes that can be matched across cities can be small for some commodities.

Reliable inter-city price comparisons require that the sampled commodities be identical, or near identical, in different locations. This ensures that variations in index levels between cities are due to price differences and not to differences in product attributes.

In order to optimize comparability and to produce this table, price comparisons were initially made by pairing cities that are geographically close. This resulted in the following pairings:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montreal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of detailed descriptions. Whenever possible, the items were matched by brand, quantity and with some regard for the comparability of retail outlets.

The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure.

The weights used for aggregating the various components of the city indexes to obtain the all-items index are based on the expenditure proportions of the consumers living in the 11 cities overall. The weights are currently based on 2001 consumer expenditure data and price updated to October 2006. The base, for which the index is equal to 100, is also the combined city average. Therefore, an index value of 102 means that the prices in that city are 2% higher than the combined city average.

It should be noted, especially in periods when prices are highly volatile, that the timing of price comparison and the relative rate of price change occurring in each location can significantly affect city-to-city retail price relationships. Since the retail prices used in this study are final prices faced by consumers, sales taxes and levies in effect in the various cities at the time of the price comparison can be of importance in explaining inter-city price differentials for items or groups of items that are subject to such taxes.

Shelter, as an expenditure category, was absent from the inter-city index program prior to 1999 because of methodological and conceptual issues associated with its measurement. For many products, adjusting for quality differences to ensure comparability across areas is relatively straightforward and can be done using traditional quality adjustment techniques. In the case of shelter however, its very diverse nature means that comparable matches across cities are difficult to make. Hedonic regression methods were used to adjust for quality differences among cities and produce more reliable inter-city comparisons of rental prices.

A rental equivalence approach is used to construct the inter-city price indexes for shelter services consumed by homeowners. Such an approach uses market rents as an approximation of the cost of shelter services faced by homeowners. This approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities. Furthermore, rents used in the index are those faced by existing renters and since the industry is regulated, they may not be indicative of rental prices faced by new renters.

## Footnotes for table 12

1. The weights shown are rounded 2001 basket weights at June 2004 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2006.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
3. While most prices are for the specified month, the rents used are for the 12 months ending in October.
