## Accessing and ordering information

This product, Catalogue no. 62-001-X, is available for free in electronic format. To obtain a single issue, visit our website at [www.statcan.ca](http://www.statcan.ca) and select "Publications."

This product, Catalogue no. 62-001-X, is also available as a standard printed publication at a price of CAN\$12.00 per issue and CAN\$111.00 for a one-year subscription.

The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CAN\$6.00	CAN\$72.00
Other countries	CAN\$10.00	CAN\$120.00

All prices exclude sales taxes.

The printed version of this publication can be ordered by:

- Telephone (Canada and United States) 1-800-267-6677
- Fax (Canada and United States) 1-877-287-4369
- E-mail [infostats@statcan.ca](mailto:infostats@statcan.ca)
- Mail

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

## Note on CANSIM

Data that appears in the **The Consumer Price Index** (catalogue no. 62-001-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 326-0009, 326-0012, 326-0015, 326-0020, 326-0021 and 326-0022, at a cost of \$3.00 per series. In general, CANSIM provides a longer historical series. For further information on CANSIM call 1-800-263-1136.

### Note to readers

Due to the February 18 holiday in Ontario, the paper version of the Consumer Price Index publication (62-001-XPE) will be available on February 20, one day later.

## This publication was prepared under the direction of:

# Highlights

- Consumer prices were up by 2.2% during the 12-month period leading up to January 2008. With a 1.4% growth, the core index continued its deceleration that began in July 2007. Lower prices for motor vehicles were the main contributor to the deceleration of the all-items and the core indexes.

## Briefing notes

### All-items Consumer Price Index:

- The 20.9% growth in gasoline prices over the 12 months leading up to January was mainly responsible for the rise in the all-items index. The acceleration in gasoline prices in January compared to December is due more to a drop in the index at this time last year than to any recent changes.
- Mortgage interest cost (+7.6%) and homeowners' replacement cost (+4.5%) continued to make a strong contribution to the annual rise in the all-items index.
- The 12-month decrease in prices to purchase and lease passenger vehicles (-4.9%) was the main factor in the slowdown in the all-items index and the core index.
- The 12-month growth in consumer prices slowed or remained unchanged in all provinces in January.

### Annual and monthly percentage change in the most quoted indexes

	Annual percentage		Monthly percentage	
	Percentage change January 2008 from January 2007	Percentage change December 2007 from December 2006	Percentage change January 2008 from December 2007	Percentage change December 2007 from November 2007
	percentage			
All-items	2.2	2.4	-0.2	0.1
Core consumer price index (CPI) (Bank of Canada definition)	1.4	1.5	0.1	-0.3
All-items excluding energy	1.3	1.7	-0.2	-0.1
Goods	0.9	1.2	-0.1	-0.2
Services	3.3	3.5	-0.3	0.3

### Main contributors to the 12-month change of the all-item index (+2.2%):

#### Main upward contributors:

- Gasoline (+20.9%)
- Mortgage interest cost (+7.6%)
- Homeowner's replacement cost (+4.5%)
- Fuel oil and other fuels (+24.7%)

#### Main downward contributors:

- Purchase and leasing of passenger vehicles (-4.9%)
- Computer equipment and supplies (-16.7%)
- Women's clothing (-4.5%)
- Fresh fruit (-6.9%)

**Main contributors to the monthly change of the all-item index not seasonally adjusted (-0.2%):****Main upward contributors:**

- Gasoline (+1.9%)
- Fresh vegetable (+7.1%)
- Mortgage interest cost (+0.7%)
- Water (+5.2%)

**Main downward contributors:**

- Purchase and leasing of passenger vehicles (-0.5%)
- Travel tours (-10.3%)
- Air transportation (-4.6%)
- Men's clothing (-3.4%)

**Historical information on the main indices and the main contributors to the 12-month change**

Index	Historical information
All-items index	2.2% increase (compared to a 2.4% increase in December). Smallest 12-month increase since August 2007 (+1.7%).
Core index	1.4% increase (compared to 1.5% growth in December). Smallest increase since July 2005 (+1.3%).
All-items index excluding energy	1.3% growth (compared to a 1.7% rise in December). Smallest rise since December 2005 (+1.3%).
Goods index	0.9% increase (compared to 1.2% growth in December).
Services index	3.3% rise (compared to a 3.5% rise in December). Slowest increase since June 2007 (+3.3%).
Gasoline	20.9% increase (compared to 14.9% growth in December). Sharpest growth since September 2005 (+34.7%).
Mortgage interest cost	7.6% rise (compared to a 7.3% increase in December). Sharpest rise since May 1991 (8.9%).
Homeowner's replacement cost	4.5% increase (compared to 4.4% in December). Smallest growth since September 2005 (+4.5%).
Fuel oil and other fuels	24.7% increase (compared to 27.1% in December).
Purchase and leasing of passenger vehicles	4.9% decrease (compared to a 4.1% decrease in December). Biggest decrease since December 1960 (-5.9%).
Computer equipment and supplies	16.7% decline (compared to a 13.7% drop in December). The sharpest decline since August 2007 (-17.4%).
Women's clothing	4.5% drop (compared to a 0.4% decrease in December). The sharpest decline posted since January 2005 (-5.1%).
Fresh fruit	6.9% decrease (compared to a 7.2% decline in December). Smallest drop since September 2007 (-4.2 %).

**Historical information on the main indices and the main contributors to the monthly change**

Index	Historical information
All-items index	0.2% drop (compared to a 0.1% increase in December). This index had dropped 0.3% in October 2007.
Core index	0.1% rise (compared to 0.3% decrease in December). Most significant rise since September 2007 (+0.4%).
All-items index excluding energy	0.2% drop (compared to 0.1% decrease in December). This index had dropped 0.3% in January 2005.
Goods index	0.1% decline (compared to a 0.2% decrease in December).
Services index	0.3% drop (compared to 0.3% rise in December).
Gasoline	1.9% rise (compared to a 1.7% increase in December).
Fresh vegetable	7.1% growth (compared to 6.2% growth in December). Highest growth since February 2007 (+12.0%).
Mortgage interest cost	0.7% growth (compared to 0.8% rise in December). Growth between 0.7% and 0.8% since July 2007.
Water	5.2% rise (after remaining unchanged in December). Biggest increase since January 2006 (+5.2%).
Purchase and leasing of passenger vehicles	0.5% decline (after remaining unchanged in December). This index declined 1.4% in October.
Travel tours	10.3% decrease (after remaining unchanged in December). Biggest decrease since January 2007 (-11.2%).
Air transportation	4.6% drop (compared to a 6.2% increase in December). This index had dropped 4.9% in September 2007.
Men's clothing	3.4% decrease (compared to a 3.2% decrease in December). Biggest decrease since June 2007 (-4.5%).

## Analysis

---

Consumer prices were up by 2.2% during the 12-month period leading up to January 2008. With a 1.4% growth, the core continued its deceleration that began in July 2007. Lower prices for motor vehicles were the main contributor to the deceleration of the all-items and the core indexes.

For the fifth straight month, growth in the all-items index was due mainly to the 12-month rise in gasoline prices and mortgage interest cost. The upward pressure on the all-items index of these two components was mitigated, to some extent, by the one-percentage-point reduction in the goods and services tax (GST) that took effect in January and the reduction in motor vehicle prices.

Excluding gasoline, the all-items CPI increased only 1.3% in the year to January 2008.

The 12-month change in the Bank of Canada's core index, which is used to monitor the inflation control target, advanced 1.4% in January, its smallest gain since July 2005.

If the seasonal effect is excluded, consumer prices rose 0.1% between December 2007 and January 2008, compared to an increase of 0.2% during the same period for the core index.

Unadjusted consumer prices fell 0.2% between December 2007 and January 2008, a reversal of the 0.1% increase during the previous period. This downturn was mainly due to seasonal declines in prices for tour packages and air transportation.

The core index climbed 0.1% between December 2007 and January 2008 after falling 0.3% during the previous period. This shift is due in part to the movement in prices for women's clothing, which recorded a monthly drop of only 0.4% in January compared to 4.7% in December.

### **12-month change: Higher gasoline prices remain the main source of upward pressure**

With a 12-month change of 20.9%, up substantially from the 14.9% posted last month, gasoline prices continued to be the main factor in higher consumer prices. The increase is due more to a sharp drop in gasoline prices at this time last year than to a rise in recent pump prices. Between December 2006 and January 2007, gasoline prices fell 3.1% while they rose 1.9% during the same period of the following year. The 12-month rise in gasoline prices in January is the steepest recorded since September 2005 (+34.7%) when Hurricane Katrina disrupted activities in this sector.

**Chart 1**  
**Evolution of the gasoline price index, Canada, not seasonally adjusted**

Source(s): CANSIM table number 326-0020.

The recent increase in gasoline prices could be partly explained by the increase in crude oil prices. The price for the barrel went over the historical threshold of 100\$US for the first time on January 3<sup>rd</sup>. The strong seasonal demand and the slowdown of production in OPEC countries exerted downward pressure on stocks which, in turn, translated into higher crude oil prices. Moreover, geopolitical tensions in Nigeria and in Iran also caused price volatility. During this same period last year, mild winter temperature in North America, high inventory levels of crude oil and a relatively stable geopolitical situation in oil producing countries led to a decrease in crude oil prices.

Over the twelve months to January 2008, prices for other oil derivatives, such as heating oil and other fuels, increased 24.7%. This is a slight slowdown compared to the 27.1% increase posted in December. This slower growth occurred despite colder temperatures that gave rise to higher demand and low inventory levels in the Northeastern United States.

The 12-month change in mortgage interest cost continued to advance in January (+7.6%). This cost rose 7.3% in December and 7.0% in November. These increases have resulted from the relatively low levels in this index during the same period last year. On a monthly basis, the mortgage interest cost index slowed.

**Chart 2**  
**Percentage change in mortgage interest cost from the previous month, Canada, not seasonally adjusted**

percentage change

Source(s): CANSIM table number 326-0020.

The 4.5% increase in homeowners' replacement cost, which represents the cost of maintaining a housing structure, also contributed to the rise in the cost of owned accommodation. This rise was slightly higher than the 4.4% increase reported in December. If the increase last month is excluded, the growth in January is the lowest since September 2005.

Canadians spent 1.1% more for food purchased in grocery stores than in the same month in 2007. However, this relatively modest increase hides substantial changes in some of the elements that make up this component of the basket. The strongest upward pressure on this index came from a rise in bakery product prices (+6.7%). Bakery product prices were impacted by the rise in wheat prices on international markets. Prices for dairy products (+2.6%) were also up.

Declines in other food components moderated the 12-month rise in the overall cost of food. Lower prices for fresh fruit (-6.9%) and fresh vegetables (-4.7%) slowed the rise in the price of food purchased in stores. These decreases were observed at a time of the year when a considerable portion of such products are imported and when the value of the Canadian dollar, in comparison to its U.S. counterpart, was higher compared to the same period last year. The 12.8% drop in the price of oranges was particularly remarkable and reflects the high costs recorded during this time last year when frost impacted crops.

The 4.9% decrease in prices to purchase and lease passenger vehicles was the main factor that mitigated the rise in consumer prices. Substantial decreases have been observed in the past three months owing to the combined impact of the reduction in the GST and discounts awarded by manufacturers on new models over the past several months. This continuation of incentives came at a time when the Canadian dollar compared favourably to its U.S. counterpart. The sharp downward movement in vehicle prices in January 2008 is in contrast to the variations observed during this time of the year.

**Chart 3**  
**Percentage change in the purchase and leasing of passenger vehicles index from the corresponding month of the previous year, Canada, not seasonally adjusted**

percentage change

Source(s): CANSIM table number 326-0020.

The downward trend in prices for computer equipment and supplies (-16.7%) continued in January. This is the steepest decline recorded since August 2007. Price decreases were particularly significant for monitors and laptops.

Women’s clothing prices were down by 4.5% in January. A decrease of such magnitude has not been observed since January 2005. Post-Christmas sales and the GST decline exerted a downward pressure on women’s clothing.

### Consumer prices eased in Western provinces

The 12-month rise in consumer prices slowed or remained steady in all provinces in January 2008, in comparison to December 2007. Prices to purchase and lease passenger vehicles were the main moderating factor in the growth in consumer prices from coast to coast.

Consumers in Alberta spent 3.6% more in January 2008 for their goods and services than in the same month of the previous year, down from the 4.1% recorded in December.

In Saskatchewan, consumer prices advanced 3.2% in the 12 months proceeding January 2008, after posting an increase of 3.7% in December. Prices to purchase and lease passenger vehicles were the key factor in this slowdown, dropping 5.1% in January on the heels of a 3.8% decrease in December.

British Columbia experienced an increase of only 0.8% in consumer prices, the slowest rate of growth since January 2002. This province experienced the smallest 12-month rise in gasoline prices (+6.1%).

### Month-to-month change: GST reduction contributes to lower consumer prices

A number of factors contributed to the 0.2% drop in the all-items CPI between December 2007 and January 2008. Vehicle purchase and lease prices had a substantial downward impact, falling 0.5% during this period. This decline was the result of the combined impact of the GST reduction and manufacturer discounts on new models.

Another key factor was the index for travel tours, which dropped 10.3%.

Lower prices for air transportation (-4.6%) also applied downward pressure on consumer prices. This decrease was driven mainly by the rollback in the cost of transatlantic flights and flights to Asia and the Pacific. The cost of these flights rose between November and December. Lower prices for air travel are frequently observed in January.

Prices for men's clothing were down by 3.4% on a monthly basis. This is the largest drop since June 2007. Men's clothing prices typically drop between December and January. Lower prices were recorded for a wide range of clothing.

In contrast, the 1.9% rise in prices at the pump partially offset these downward pressures. This represents a slight acceleration from the 1.7% increase observed in December.

Canadians saw the price of food purchased in stores rise by 1.2% between December 2007 and January 2008. The seasonal increase in the cost of fresh vegetables (+7.1%) was the main contributor to this rise. It was driven in part by higher prices for tomatoes (+19.0%). Higher meat prices (+1.0%), largely driven by the rise in the price of chicken (+3.3%), also drove up food prices. In addition, a rise in dairy product prices (+1.3) also contributed to this increase.

Mortgage interest cost was up by 0.7% in January, a slowdown from the 0.8% increases posted in the previous four months. The impact of the change in interest rates on the rise in this component was virtually identical to that of the change in new housing prices.

The cost of water climbed 5.2% between December 2007 and January 2008. An increase of such magnitude has not been observed since January 2006. Water prices rose in several municipalities. The provinces that experienced the most significant increases were Newfoundland and Labrador (+8.7%), Saskatchewan (+7.1%), British Columbia (7.1%) and Manitoba (+7.0%). Higher prices for this component are frequently observed during this period of the year.

### **Core index slows for a seventh straight month**

The Bank of Canada's core index was up by 1.4% in January 2008 over January 2007, down slightly from the 1.5% rate of growth recorded in the previous month. This is the seventh consecutive slowdown for this index. The 4.9% decrease in prices to purchase and lease passenger vehicles were mainly responsible for mitigating the rise in consumer prices. The 12-month increase in the core index posted in January is the lowest since July 2005. In January, homeowner's replacement cost continued to drive up the core index.

The core index is obtained by removing the effect of the changes in indirect taxes from the all-items CPI from which the eight most volatile components identified by the Bank of Canada have been excluded. These volatile components are fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; heating oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies.

Between December 2007 and January 2008, the unadjusted core index rose 0.1%, up from the 0.3% decline posted during the previous month.

### **Energy index slows on a monthly basis with the slowdown in prices for heating oil and other fuels**

The energy index climbed by 11.0% between January 2007 and January 2008, up from the 8.7% rise observed in December. This growth can be attributed mainly to gasoline prices, which experienced a 12-month climb from 14.9% in December 2007 to 20.9% in January 2008. The increase resulted more from the relatively low level of this index last year than from any recent market developments. Higher prices in heating oil and other fuels (+24.7%) also contributed to the rise of this index. These upward pressures were offset in part by the 0.9% drop in the price of electricity and 0.6% decline in natural gas prices.

Month over month, the energy index slowed. It rose only 0.6% between December 2007 and January 2008 after increasing 1.2% in the previous month. This slowdown can be attributed for the most part to the price of heating

oil and other fuels, which increased only 2.5% on a monthly basis in January after jumping 9.9% in December. The 1.9% increase in gasoline prices drove the monthly increase in this index.

### **Costs for owned accommodation continue to exert strong upward pressure on the services index**

The price for services grew 3.3% in the 12 months leading up to January 2008, which is slightly lower than the growth recorded in the previous period (+3.5%). This rise is primarily the result of increases in mortgage interest cost (+7.6%) and homeowners' replacement cost (+4.5%). The drop in prices for vehicle leases (-4.9%) partially mitigated this growth.

The unadjusted price for services fell by 0.3% between December 2007 and January 2008. This drop was due mainly to lower prices for travel tours (-10.3%) and air transportation (-4.6%).

The unadjusted goods index climbed 0.9% between January 2007 and January 2008, a slowdown from the 1.2% increase posted in December. This reduction was mainly the result of lower prices for vehicle purchases and for computer equipment and supplies.

Non-durable goods (+3.9%) exerted the strongest upward pressure on the unadjusted goods index. This increase was largely driven by gasoline (+20.9%).

This upward pressure was offset in part by the movement in prices for durable goods. This index fell 4.2% in the 12-month period proceeding January 2008, coming on the heels of the record low decline of 3.2% recorded in December 2007. The key factor in this decline was lower prices for vehicle purchases and for computer equipment and supplies.

Semi-durable goods also slowed the 12-month growth in the goods index, falling 1.0% in January 2008 compared to an increase of 0.7% in December 2007. The prices of women's clothing largely contributed to the decrease in this index with a decline of 4.5% in January compared to only 0.4% in December.

Between December 2007 and January 2008, the goods index was down by 0.1%, following the 0.2% decline recorded in the previous month. The strongest downward pressure on this index came from durable goods (-1.1%), driven by lower prices for vehicle purchases. Semi-durable goods (-1.1%) also contributed, although to a lesser extent, to this decline. The 0.7% increase in the prices of non-durable goods partially mitigated the impact of these increases.

### **Seasonally adjusted CPI up 0.1% between December and January**

On a seasonally adjusted basis, the all-items CPI advanced by 0.1% between December 2007 and January 2008, down from the 0.3% rise recorded last month. Seasonally adjusted CPI growth in January was mainly the result of higher food prices (+0.3%).

The seasonally adjusted core index was up 0.2% between December 2007 and January 2008 after increasing 0.1% during the previous period.

### **Impact of decline in Goods and Services Tax (GST)**

Since the price changes measured by the CPI take into account the value of the consumption taxes paid by Canadians, the one percentage point decrease in the GST announced by the government to take effect in January will have an impact on the CPI in that month.

A rough estimation of this impact is that the rate of change would be lower by 0.6% than it otherwise would have been if the entire amount of the decrease were transferred to consumers through lower prices. To the extent that businesses raise their margins at the same time the impact could be correspondingly less. Also, if some businesses

had already reduced their prices in anticipation of the coming GST reduction (e.g. car dealers), the impact in January would also be less.

# Data quality, concepts and methodology

---

## Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

## Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

## Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

## Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

## Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

## Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Prices Division.

Text table 1

### Comparison of the 2005 and 2001 distribution<sup>1</sup> of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditures		2001 Expenditures
	Expressed in 2005 prices	Expressed in April 2007 prices	Expressed in April 2007 prices
	percent		
<b>Major Components</b>			
<b>All-Items</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>
Food	16.9	17.0	17.1
Shelter	25.7	26.6	27.7
Household operations, furnishings and equipment	11.4	11.1	10.2
Clothing and footwear	5.6	5.4	5.1
Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

## Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

## Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

## Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

## Explanatory notes for tables

### **Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted**

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

### **Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted**

#### **Table 4-1**

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

#### **Table 4-2**

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: [prices-prix@statcan.ca](mailto:prices-prix@statcan.ca).

**Table 4-7**

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

**Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data**

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

**Table 6 Core consumer price index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data**

1. The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

**Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data**

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
4. The annual index level is the average of the 12 individual monthly indexes.

## Table 8 Annual average percentage changes for the Consumer Price Index

### Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

### Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.

**Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data**

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

**Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted**

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.

**Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data**

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.

### **Table 14 Average retail prices, monthly, Canada**

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

#### **Average retail prices for food, household supplies, personal care items, cigarettes and gasoline**

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

### **Table 15 Inter-city indexes of retail price differentials, as of October 2006, for selected groups of consumer goods and services, not seasonally adjusted**

Table 15 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of goods and services at the specified point in time.

Price data for the current inter-city retail price comparison table was drawn to a large extent from the price information collected for the production of the Consumer Price Index (CPI) for October 2006<sup>(3)</sup>. Statistics Canada collects prices as part of the regular monthly CPI survey for the purpose of measuring price change through time. The number of prices collected is sufficient for this purpose at current levels of publication. The CPI sample was not selected for the purpose of calculating average price levels and comparing them across regions. No attempt is made to ensure that the products selected for the purpose of calculating the CPI are comparable across regions. As a result, the number of price quotes that can be matched across cities can be small for some commodities.

Reliable inter-city price comparisons require that the sampled commodities be identical, or near identical, in different locations. This ensures that variations in index levels between cities are due to price differences and not to differences in product attributes.

In order to optimize comparability and to produce this table, price comparisons were initially made by pairing cities that are geographically close. This resulted in the following pairings:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Ottawa	Halifax
Toronto	Montreal
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Edmonton	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of detailed descriptions. Whenever possible, the items were matched by brand, quantity and with some regard for the comparability of retail outlets.

The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure.

The weights used for aggregating the various components of the city indexes to obtain the all-items index are based on the expenditure proportions of the consumers living in the 11 cities overall. The weights are currently based on 2001 consumer expenditure data and price updated to October 2006. The base, for which the index is equal to 100, is also the combined city average. Therefore, an index value of 102 means that the prices in that city are 2% higher than the combined city average.

It should be noted, especially in periods when prices are highly volatile, that the timing of price comparison and the relative rate of price change occurring in each location can significantly affect city-to-city retail price relationships. Since the retail prices used in this study are final prices faced by consumers, sales taxes and levies in effect in the various cities at the time of the price comparison can be of importance in explaining inter-city price differentials for items or groups of items that are subject to such taxes.

Shelter, as an expenditure category, was absent from the inter-city index program prior to 1999 because of methodological and conceptual issues associated with its measurement. For many products, adjusting for quality differences to ensure comparability across areas is relatively straightforward and can be done using traditional quality adjustment techniques. In the case of shelter however, its very diverse nature means that comparable matches across cities are difficult to make. Hedonic regression methods were used to adjust for quality differences among cities and produce more reliable inter-city comparisons of rental prices.

A rental equivalence approach is used to construct the inter-city price indexes for shelter services consumed by homeowners. Such an approach uses market rents as an approximation of the cost of shelter services faced by homeowners. This approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities. Furthermore, rents used in the index are those faced by existing renters and since the industry is regulated, they may not be indicative of rental prices faced by new renters.

### Footnotes for table 15

1. The weights shown are rounded 2001 basket weights at June 2004 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2006.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
3. While most prices are for the specified month, the rents used are for the 12 months ending in October.
