Briefing notes

Highlights:

Consumer prices rose 3.5% in August 2008 compared to August 2007, slightly higher than the 3.4% increase posted in the 12 months to July 2008. Consumers continued to face higher prices at the pump, which continued to be the most significant individual upward contributor on consumer prices in the 12 months to August 2008.

All-items Consumer Price Index (CPI):

- A 26.3% rise in gasoline prices in the 12 months to August 2008 was the primary cause for higher consumer prices and pushed consumer prices to their highest increase since March 2003.
- Other energy components, such as natural gas and fuel oil and other fuels, also contributed strongly to the rise in consumer prices in August 2008.
- Rising prices for energy accounted for about half of the increase in the CPI in the 12 months to August 2008.
- Helping to offset rising energy prices was a drop in prices to purchase and lease passenger vehicles.

Main contributors to the 12-month change of the CPI:

Main upward contributors:

- Gasoline (+26.3%)
- Mortgage cost (+8.1%)
- Natural gas (+31.7%)
- Fuel oil and other fuels (+49.4%)

Main downward contributors:

- Purchase and leasing of passenger vehicles (-7.3%)
- Computer equipment and supplies (-11.6%)
- Women's clothing (-3.4%)

Main contributors to the monthly change of the CPI, not seasonally adjusted:

Main upward contributors:

- Natural gas (+6.3%)
- Traveller accommodation (+3.0%)
- Meat (+1.5%)

Main downward contributors:

- Gasoline (-6.6%)
- Fresh vegetables (-9.0%)
- Women's clothing (-1.7%)

Analysis

Consumer prices rose 3.5% from August 2007 to August 2008, largely driven by higher prices for gasoline. On a seasonally adjusted basis, consumer prices were 0.2% higher in August 2008 compared to July 2008.

The 12-month increase in the Consumer Price Index (CPI) in August 2008 was the largest rise since the 12-month rate of growth of 4.2% recorded in March 2003.

Gasoline prices rose 26.3% in August 2008 compared to August 2007. Prices for other energy components, such as natural gas and fuel oil and other fuels, also contributed significantly to the rise in consumer prices. Overall, energy prices rose 20.2% over the 12 months to August 2008.

The increase in the energy price index accounted for about half of the overall increase in the 12-month variation of the CPI in August 2008. Excluding energy, the CPI rose 1.8% over the 12 months to August 2008, up from the 1.6% 12-month rate of growth posted for July 2008.

Driven by price increases for grain and bakery products, prices for food purchased from stores also contributed significantly to the change in the 12-month CPI in August 2008.

Partially offsetting the impact of rising gasoline prices was a drop in prices to purchase and lease passenger vehicles.

On a month-to-month basis, consumer prices prior to seasonal adjustments fell 0.2% from July 2008 to August 2008, a slowdown from the 0.3% increase recorded from June 2008 to July 2008.

The seasonally-adjusted monthly all-items CPI rose 0.2% from July 2008 to August 2008, after rising 0.3% in the previous period.

12-month change: Transportation, shelter and food continue to push up consumer prices

Of the eight major CPI components, transportation costs rose the most in the 12 months to August 2008, followed by price increases for shelter and food. The Canadian consumer faced on average a 5.8% rise in costs for transportation, largely the result of a 26.3% increase in prices for gasoline over the 12 months to August 2008.

While gasoline prices continued to exert the strongest upward pressure on consumer prices in August 2008, a 7.3% drop in prices to purchase and lease passenger vehicles over the 12 months to August 2008 helped to mitigate the rise in transportation costs.

This was the fourteenth consecutive month that prices to purchase and lease passenger vehicles declined on a 12-month basis. Consumers of new vehicles have benefited from competition between vehicle manufacturers.

Chart 1
Out of the eight major CPI components, increases in transportation costs led the way

Rising mortgage costs and prices for energy associated with housing, contributed significantly to the 5.3% 12-month advance in the shelter price index in August 2008.

Over the 12 months to August 2008, the mortgage interest cost index slowed to a growth rate of 8.1%, down from the 8.5% 12-month rate of growth posted for July 2008. Easing new housing prices primarily accounted for the slowdown in mortgage costs.

A 12-month increase of 31.7% for natural gas prices and a 49.4% rise in prices for fuel oil and other fuels also contributed significantly to the rise in consumer prices and costs associated with shelter over the 12 months to August 2008.

After rising at a 12-month rate of 3.7% in July 2008, food prices rose 4.5% over the 12 months to August 2008 and continued to exert upward pressure on the CPI. Prices for food purchased from stores rose 5.2%, the largest 12-month rise since June 2001.

Prices for bakery and cereal products (+14.9%) continued to exert the strongest upward pressure on prices for food purchased from stores. Prices for bakery and cereal products have been trending upward since late 2007 and posted the largest increase since September 1981 in the 12 months to August 2008.

Chart 2
Prices for bakery and cereal products continue to push up prices for food

Over the 12 months to August 2008, a 9.2% rise in fresh vegetable prices also pushed up prices for food, partly the result of higher transportation costs related to fuel.

In contrast to prices for food purchased from stores, prices for food purchased from restaurants advanced by a more moderate 2.7% over the 12 months to August 2008.

Continual price declines for clothing and footwear (-1.8%), due primarily to a drop in prices for women's clothing, helped to mitigate the rise in the 12-month CPI in August 2008.

A marginal 0.6% 12-month rise in the recreation, education and reading index also helped to ease the rise in consumer prices over the 12 months to August 2008. Continual price declines for electronic equipment and the purchase of recreational vehicles helped to offset rising prices for other recreation, education and reading goods and services.

Over the 12 months to August 2008, an 11.6% price decline for computer equipment and supplies was the second most significant downward contributor on the CPI behind the drop in prices to purchase and lease new passenger vehicles.

The provinces: Consumer prices in the Prairies bounce back

On the Prairies, the rate of growth in consumer prices was faster in August than it was in July, particularly in Manitoba and Alberta. Consumers in the three most eastern provinces (Newfoundland and Labrador, Prince Edward Island and Nova Scotia), however, continued to face the highest rise in consumer prices over the 12 months to August 2008.

In Manitoba, consumer prices advanced 3.4% over the 12 months to August, up from the 2.6% increase in July. After rising 3.5% over the 12 months to July 2008, consumer prices in Alberta rose 4.0% over the 12 months to August 2008.

The advance in consumer prices in Manitoba and Alberta between the 12-month variations reported in July 2008 and August 2008 was due primarily to increasing natural gas prices.

Canada Newfoundland and Labrador Prince Edward Island Nova Scotia **New Brunswick** Quebec Ontario Manitoba Saskatchewan August 2008 Alberta ■ July 2008 British Columbia 0.0 1.0 2.0 3.0 4.0 5.0 6.0 12-month percentage change

Chart 3 Consumer prices by province

Higher consumer price increases in the three most eastern provinces were due primarily to strong gains in energy prices.

With the exception of Alberta, the most significant individual upward contributor on consumer prices in August 2008 came from higher prices for gasoline. The 12-month variation in the gasoline price index ranged from 30.7% in British Columbia to 21.6% in Saskatchewan.

In Alberta, it was a 73.7% 12-month rise in natural gas prices that contributed largely to rising consumer prices.

Lower prices to purchase and lease passenger vehicles were observed across the country and were the most significant individual downward contributor on the CPI for all provinces.

Month-to-month change: A drop in gasoline prices provides relief to drivers

Consumer prices fell 0.2% from July 2008 to August 2008 prior to seasonal adjustment, down from the growth of 0.3% recorded from June 2008 to July 2008. The most significant downward contributor on the monthly CPI in August 2008 was a drop in prices for gasoline.

On a month-to-month basis, gasoline prices fell 6.6% in August 2008 when compared to July 2008.

Chart 4
Percentage change in the all-items index from the previous month, Canada and provinces, 2002=100, not seasonally adjusted

Chart 5
Drivers receive relief from falling prices for gasoline

month-to-month percentage change

Source(s): CANSIM table number 326-0020.

Also helping to push consumer prices down from July 2008 to August 2008 was a drop in prices for fresh vegetables (-9.0%), a price movement that is typically observed at this time of the year.

Putting upward pressure on the monthly CPI in August 2008 were increases in prices for natural gas (+6.3%), traveller accommodation (+3.0%) and meat (+1.5%).

On a seasonally adjusted basis, the CPI rose 0.2% from July 2008 to August 2008, down from the 0.3% rise posted in the previous period.

The 12-month variation of the Bank of Canada's core index makes a move

The Bank of Canada's core index¹ advanced 1.7% over the 12 months to August 2008, faster than the increases of 1.5% recorded over the four previous 12-month periods. Gasoline, mortgage costs, natural gas and fuel oil and other fuels accounted for the majority of the difference between the CPI and the Bank's core index movement.

Prior to seasonal adjustment, the Bank of Canada's core index rose 0.3% from July 2008 to August 2008, after rising 0.1% in the previous period.

The seasonally adjusted monthly core index advanced 0.3% from July 2008 to August 2008, after advancing 0.1% from June 2008 to July 2008.

The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.

Table 14 Average retail prices, monthly, Canada

	CANSIM vector	June 2008	July 2008	August 2008
	number			
			dollars 1	
Round steak, 1 kilogram	(v735165)	11.82	11.86	12.22
Sirloin steak, 1 kilogram	(v735176)	15.04	15.08	15.69
Prime rib roast, 1 kilogram	(v735187)	20.54	21.36	21.83
Blade roast, 1 kilogram	(v735198)	9.15	9.38	9.51
Stewing beef, 1 kilogram	(v735209) (v735220)	9.38 6.19	9.53 6.13	9.59 6.23
Ground beef, regular, 1 kilogram Pork chops, 1 kilogram	(v735220) (v735221)	9.19	9.18	9.38
Chicken, 1 kilogram	(v735221) (v735223)	5.93	6.11	6.21
Bacon, 500 grams	(v735166)	4.41	4.44	4.55
Wieners, 450 grams	(v735167)	2.65	2.68	2.69
Canned sockeye salmon, 213 grams	(v735168)	3.25	3.29	3.25
Homogenized milk, 1 litre	(v735169)	2.09	2.07	2.08
Partly skimmed milk, 1 litre	(v735170)	1.99	1.99	2.00
Butter, 454 grams	(v735171)	4.28	4.28	4.27
Processed cheese food slices, 250 grams	(v735172)	2.83	2.81	2.82
Evaporated milk, 385 millilitres	(v735173)	1.69	1.67	1.69
Eggs, 1 dozen	(v735174)	2.53	2.59	2.64
Bread, 675 grams	(v735175)	2.45	2.49	2.45
Soda crackers, 450 grams	(v735177)	2.17	2.24	2.34
Macaroni, 500 grams	(v735178)	1.45 5.10	1.50 5.20	1.51 5.15
Flour, 2.5 kilograms Corn flakes, 675 grams	(v735179) (v735180)	3.81	3.94	3.15
Apples, 1 kilogram	(v735180) (v735181)	3.25	3.38	3.64
Bananas, 1 kilogram	(v735161) (v735182)	1.42	1.44	1.43
Grapefruits, 1 kilogram	(v735183)	2.48	2.69	2.67
Oranges, 1 kilogram	(v735184)	2.73	2.91	3.06
Apple juice, canned, 1.36 litres	(v735185)	1.88	1.88	1.89
Orange juice, tetra-brick, 1 litre	(v735186)	3.70	3.63	3.67
Carrots, 1 kilogram	(v735189)	1.80	1.87	1.76
Celery, 1 kilogram	(v735190)	3.11	2.81	1.99
Mushrooms, 1 kilogram	(v735191)	7.03	7.27	7.25
Onions, 1 kilogram	(v735192)	1.27	1.34	1.42
Potatoes, 4.54 kilograms	(v735193)	4.55	4.86	5.53
French fried potatoes, frozen, 1 kilogram Baked beans, canned, 398 millilitres	(v735194) (v735195)	2.03 0.93	1.99 0.90	2.01 0.91
Tomatoes, canned, 796 millilitres	(v735195) (v735196)	1.30	1.29	1.30
Tomato juice, canned, 1.36 litres	(v735190) (v735197)	1.63	1.58	1.62
Ketchup, 1 litre	(v735199)	2.59	2.72	2.71
Sugar, white, 2 kilograms	(v735200)	2.35	2.41	2.43
Coffee, roasted, 300 grams	(v735201)	3.78	3.88	3.98
Coffee, instant, 200 grams	(v735202)	5.17	5.17	5.30
Tea (72 bags)	(v735203)	3.91	3.90	3.88
Cooking or salad oil, 1 litre	(v735204)	3.89	4.09	4.14
Soup, canned, 284 millilitres	(v735205)	0.93	0.95	0.95
Baby food, 128 millilitres	(v735206)	0.67	0.67	0.68
Peanut butter, 500 grams	(v735207)	2.67	2.76	2.78
Fruit flavoured crystals, 2.25 litres	(v735208)	1.22 1.42	1.22 1.41	1.24 1.40
Soft drinks, cola type, 2 litres	(v735210) (v735211)	1.42	1.41	1.40 1.48
Soft drinks, lemon-lime type, 2 litres Paper towels (2 rolls)	(v735211) (v735213)	2.32	2.34	2.40
Facial tissue (200 tissues)	(v735213) (v735214)	2.03	2.03	2.02
Bathroom tissue (4 rolls)	(v735214)	2.18	2.24	2.23
Shampoo, 300 millilitres	(v735216)	3.14	3.04	3.20
Deodorant, 60 grams	(v735217)	3.42	3.59	3.64
Toothpaste, 100 millilitres	(v735218)	1.42	1.31	1.40
Cigarettes (200)	(v735219)	78.71	78.12	76.17
Regular, unleaded gasoline at self-service stations, cents per litre	(v41838376)	135.1	136.6	127.3

Note(s): See "Data quality, concepts and methodology — Explanatory notes for tables" section.

Note(s): See "Data quality, concepts and methodology — Explanatory notes for tables" section and Table B for complete list of vector numbers.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the Consumer Price Index consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see The Consumer Price Index Reference Paper catalogue no. 62-553-X (Occasional) or contact Prices Division.

Text table 1 Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2005 Expenditu	res	2001 Expenditures

Transportation	19.6	19.9	20.2
Health and personal care	4.8	4.7	4.4
Recreation, education and reading	13.0	12.2	11.2
Alcoholic beverages and tobacco products	3.1	3.1	4.2

^{1.} Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. http://www.bankofcanada.ca/en/inflation/index.htm.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through CANSIM, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Igaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-11 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

- 1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
- 2. Figures may not add to 100% due to rounding.
- The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, not seasonally adjusted

Data for Igaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Igaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Igaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

- In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
- Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.gc.ca.

Table 4-5

Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core consumer price index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

- The measure of core consumer price index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: http://www.bankofcanada.ca/en/inflation/index.htm.
- The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

- Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
- A service in the consumer price index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

- The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
- Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the consumer price index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact Client Services Unit, Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, e-mail: prices-prix@statcan.gc.ca.

In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

- 2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
- 3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items consumer price index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
- 4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Igaluit, not seasonally adjusted, historical data

- 1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
- 2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
- Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
- 3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

- With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
- 2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Igaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
- 3. The annual index level is the average of the 12 individual monthly indexes.
- Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2006, for selected groups of consumer goods and services, not seasonally adjusted

Table 15 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of goods and services at the specified point in time.

Price data for the current inter-city retail price comparison table was drawn to a large extent from the price information collected for the production of the Consumer Price Index (CPI) for October 2006 (3). Statistics Canada collects prices as part of the regular monthly CPI survey for the purpose of measuring price change through time. The number of prices collected is sufficient for this purpose at current levels of publication. The CPI sample was not selected for the purpose of calculating average price levels and comparing them across regions. No attempt is made to ensure that the products selected for the purpose of calculating the CPI are comparable across regions. As a result, the number of price quotes that can be matched across cities can be small for some commodities.

Reliable inter-city price comparisons require that the sampled commodities be identical, or near identical, in different locations. This ensures that variations in index levels between cities are due to price differences and not to differences in product attributes.

In order to optimize comparability and to produce this table, price comparisons were initially made by pairing cities that are geographically close. This resulted in the following pairings:

St. John's Halifax Charlottetown-Summerside Halifax Saint John Halifax Ottawa Halifax Toronto Montreal Ottawa Toronto Toronto Winnipeg Winnipeg Regina Edmonton Winnipeg Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of detailed descriptions. Whenever possible, the items were matched by brand, quantity and with some regard for the comparability of retail outlets.

The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure.

The weights used for aggregating the various components of the city indexes to obtain the all-items index are based on the expenditure proportions of the consumers living in the 11 cities overall. The weights are currently based on 2001 consumer expenditure data and price updated to October 2006. The base, for which the index is equal to 100, is also the combined city average. Therefore, an index value of 102 means that the prices in that city are 2% higher than the combined city average.

It should be noted, especially in periods when prices are highly volatile, that the timing of price comparison and the relative rate of price change occurring in each location can significantly affect city-to-city retail price relationships. Since the retail prices used in this study are final prices faced by consumers, sales taxes and levies in effect in the various cities at the time of the price comparison can be of importance in explaining inter-city price differentials for items or groups of items that are subject to such taxes.

Shelter, as an expenditure category, was absent from the inter-city index program prior to 1999 because of methodological and conceptual issues associated with its measurement. For many products, adjusting for quality differences to ensure comparability across areas is relatively straightforward and can be done using traditional quality adjustment techniques. In the case of shelter however, its very diverse nature means that comparable matches across cities are difficult to make. Hedonic regression methods were used to adjust for quality differences among cities and produce more reliable inter-city comparisons of rental prices.

A rental equivalence approach is used to construct the inter-city price indexes for shelter services consumed by homeowners. Such an approach uses market rents as an approximation of the cost of shelter services faced by homeowners. This approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities. Furthermore, rents used in the index are those faced by existing renters and since the industry is regulated, they may not be indicative of rental prices faced by new renters.

Footnotes for table 15

- The weights shown are rounded 2001 basket weights at June 2004 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2006.
- 2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
- 3. While most prices are for the specified month, the rents used are for the 12 months ending in October.
