Highlights

- Consumer prices rose 2.4% in the 12 months to October, following a 1.9% increase in September. On a seasonally adjusted monthly basis, consumer prices rose 0.7% in October.

Briefing notes

Highlights:

- Consumer prices rose 2.4% in the 12 months to October, following a 1.9% increase in September. On a non-seasonally adjusted monthly basis, consumer prices rose 0.4% in October, after increasing 0.2% in September.

All-items Consumer Price Index (CPI):

- In October, prices at the pump were 8.8% higher than a year earlier, following a 3.1% increase posted the previous month.
- Excluding gasoline, the Consumer Price Index (CPI) rose 2.1% in October after increasing 1.8% in September.
- Higher consumer prices were posted in October for electricity (+8.1%), the purchase of passenger vehicles (+4.9%), homeowner's replacement cost (+4.9%), and passenger vehicle insurance premiums (+4.6%).
- Prices increased in seven of the eight major components of the CPI in the 12 months to October; the only exception was clothing and footwear.

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+8.8%)
- Purchase of passenger vehicles (+4.9%)
- Electricity (+8.1%)
- Homeowner's replacement cost (+4.9%)
- Passenger vehicle insurance premiums (+4.6%)

Main downward contributors:

- Mortgage interest cost (-3.0%)
- Computer equipment and supplies (-12.5%)
- Air transportation (-4.5%)
- Furniture (-2.9%)
- Video equipment (-12.1%)

Main contributors to the monthly change in the CPI, non-seasonally adjusted:

Main upward contributors:

- Gasoline (+3.3%)
- Property taxes (+3.5%)
- Passenger vehicle insurance premiums (+2.0%)
- Purchase of passenger vehicles (+0.8%)
- Men's clothing (+3.3%)

Main downward contributors:

- Traveller accommodation (-6.6%)
- Non-alcoholic beverages (-4.2%)
- Natural gas (-2.7%)
- Electricity (-0.9%)
- Furniture (-1.6%)

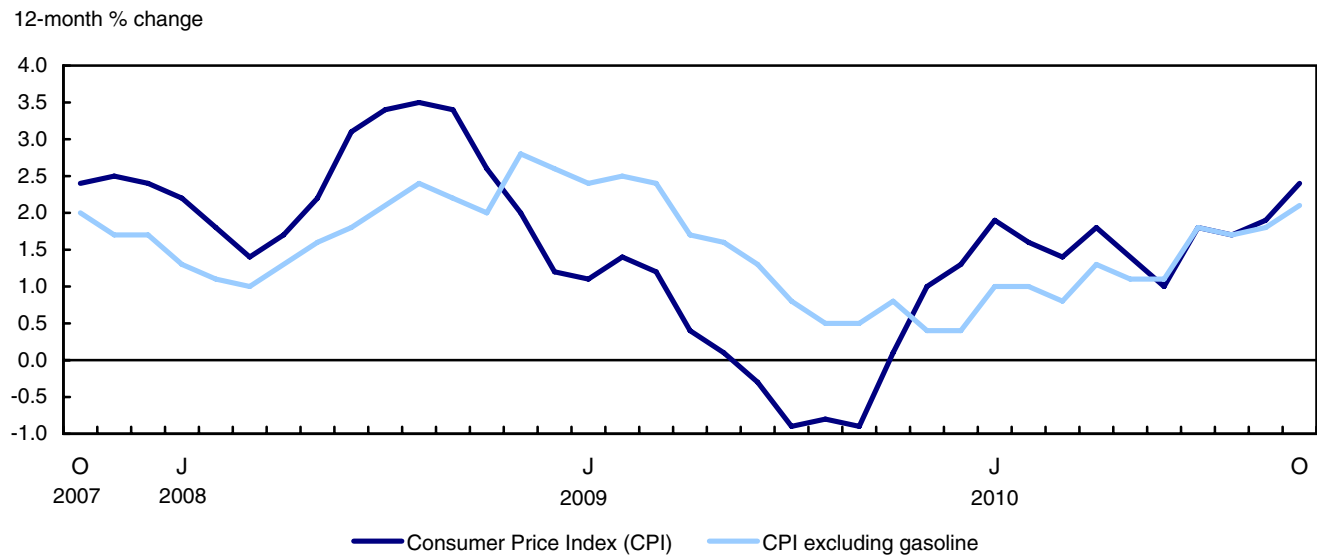

Twelve month and monthly percentage change in the most quoted indexes, not seasonally adjusted

	12-month percentage change		Monthly percentage change	
	October 2009 to October 2010	September 2009 to September 2010	September 2010 to October 2010	August 2010 to September 2010

All-items excluding food and energy	1.7	1.4	0.4	0.4
Goods	2.5	1.7	0.5	0.1
Services	2.3	2.1	0.3	0.2

Analysis

Consumer prices rose 2.4% in the 12 months to October, the largest increase since October 2008. It follows the 1.9% increase posted in September. About half of the 0.5 percentage point increase can be attributed to higher gasoline prices.

Chart 1
The 12-month change in the Consumer Price Index and the CPI excluding gasoline

In October, prices at the pump were 8.8% higher than a year earlier, following a 3.1% increase posted the previous month.

Excluding gasoline, the Consumer Price Index (CPI) rose 2.1% in October after increasing 1.8% in September.

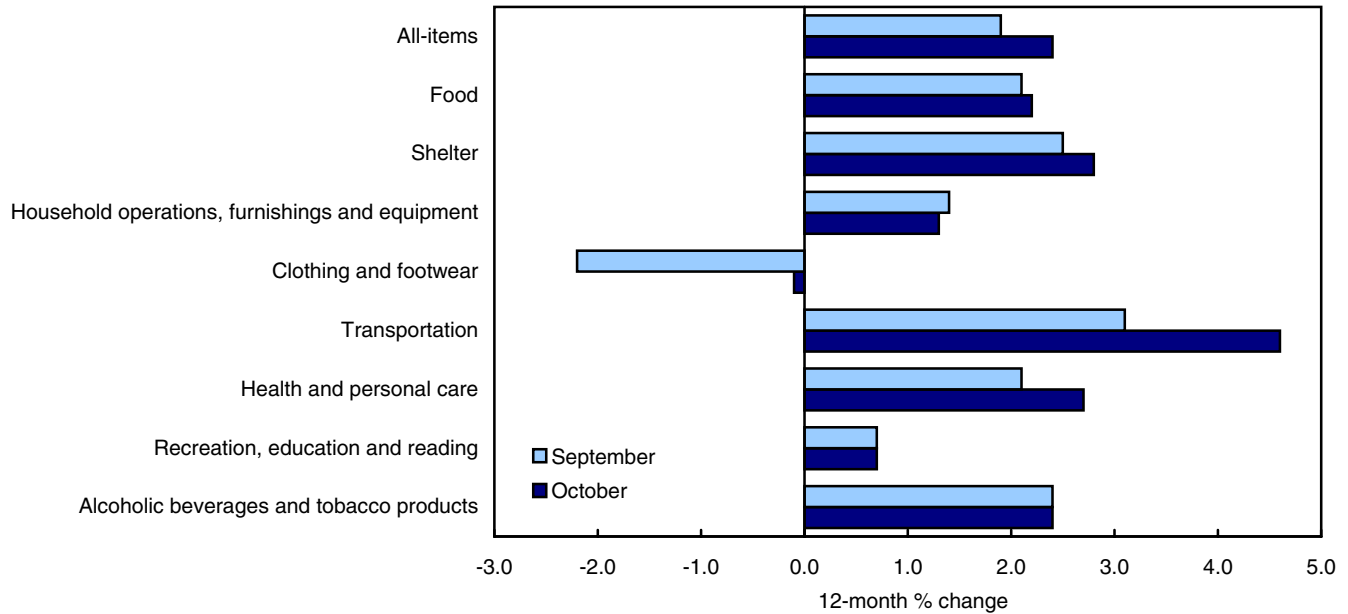

Energy prices advanced 9.1% during the 12 months to October, following a 5.6% increase in September. In addition to rising gasoline prices, prices for electricity increased 8.1%, while natural gas prices rose 10.6%.

Prices for the purchase of passenger vehicles rose 4.9% in the 12 months to October, following a 5.0% increase in September.

12-month change: Increase in seven of the eight major components

Prices increased in seven of the eight major components of the CPI in the 12 months to October; the only exception was clothing and footwear.

Chart 2
Prices up in seven of eight major components

Transportation costs were up 4.6% in October after rising 3.1% in September. In addition to higher prices for gasoline and the purchase of passenger vehicles, passenger vehicle insurance premiums increased 4.6%, as standard automotive insurance coverage changed in Ontario.

Shelter costs rose 2.8% compared with October last year. In addition to higher electricity prices, homeowner’s replacement cost rose 4.9%, while property taxes were up 3.5%.

However, the mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, declined 3.0% in October.

Food prices rose 2.2%, following a 2.1% increase in September. Consumers paid more for food purchased from restaurants. Higher prices were also recorded for meat, fresh vegetables, and non-alcoholic beverages.

Prices for household operations, furnishings and equipment advanced 1.3%. Prices rose for child care and domestic services, while prices for furniture declined.

The health and personal care index posted a 2.7% increase in October after increasing 2.1% the previous month. Within this component, price increases were observed for toiletries and cosmetics, non-prescribed medicines, and oral-hygiene products.

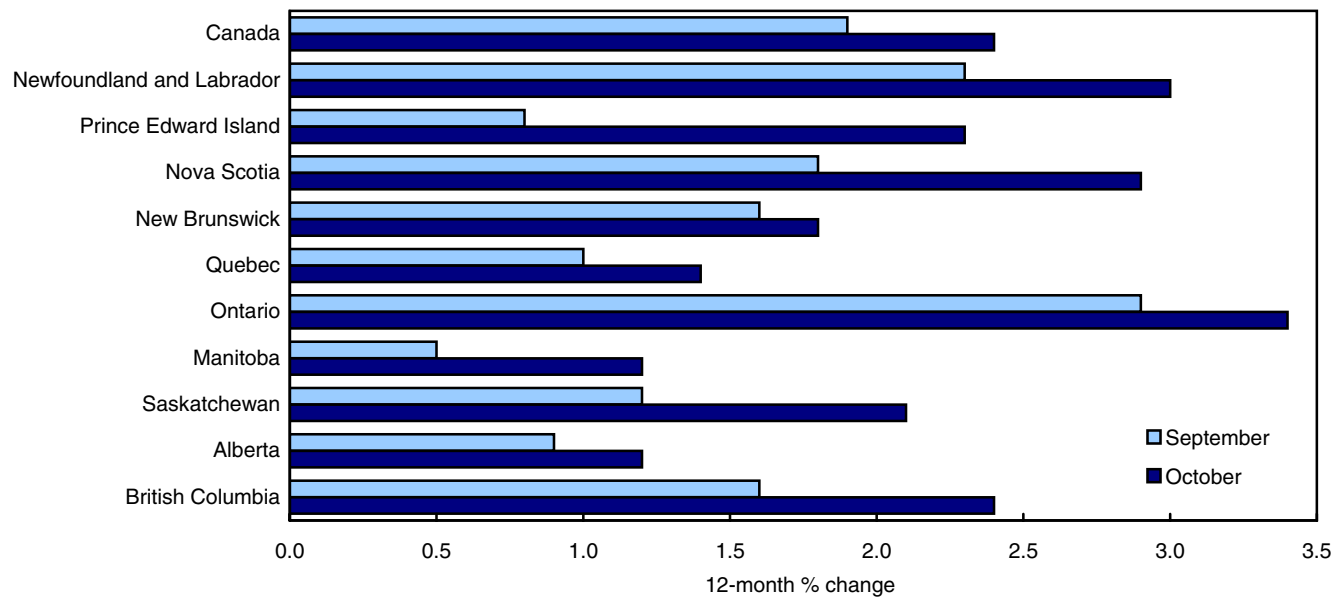

The recreation, education and reading index increased 0.7% during the 12-month period to October. Consumers paid more for the use of recreational facilities and services. Prices for computer equipment and supplies decreased. Video equipment prices also fell.

Clothing and footwear prices fell 0.1% following a 2.2% decline in September. Prices decreased for women’s clothing, children’s clothing, and footwear, while prices for men’s clothing increased.

The provinces

Price increases were recorded in every province on a year-over-year basis in October.

Chart 3
Consumer prices increase in all provinces, year-over-year

In all provinces, consumers paid more for gasoline in October compared with the same month last year.

In Ontario, prices rose 3.4% after a 2.9% increase in September. Prices were up for gasoline (+11.0%), electricity, and the purchase of passenger vehicles. Increases in passenger vehicle insurance premiums and homeowner's replacement cost were also recorded.

In British Columbia, prices increased 2.4% during the 12 months to October following a 1.6% rise in September. Prices rose for gasoline (+9.2%) and food purchased from restaurants. Homeowner's replacement cost and prices for the purchase of passenger vehicles and electricity also went up in the province.

Prices in Quebec increased 1.4% compared with 1.0% in September. Higher prices were recorded for gasoline (+8.7%), the purchase of passenger vehicles, passenger vehicle insurance premiums and property taxes.

In Alberta, prices rose 1.2% following a 0.9% increase in the month before. Consumers paid more for the purchase of passenger vehicles, property taxes, gasoline (+4.5%) and natural gas.

The non-seasonally adjusted monthly CPI increases

Consumer prices prior to seasonal adjustment rose 0.4%, after rising 0.2% in September.

Prices increased in four of the eight major components of the CPI in October; transportation; shelter; clothing and footwear; and alcoholic beverages and tobacco products.

Transportation prices increased 1.3% in October. Prices for gasoline rose 3.3% following a 0.3% decrease in September. Passenger vehicle insurance premiums also increased.

Shelter costs rose 0.6%. Consumers paid more in property taxes. Prices for homeowner's home and mortgage insurance also increased.

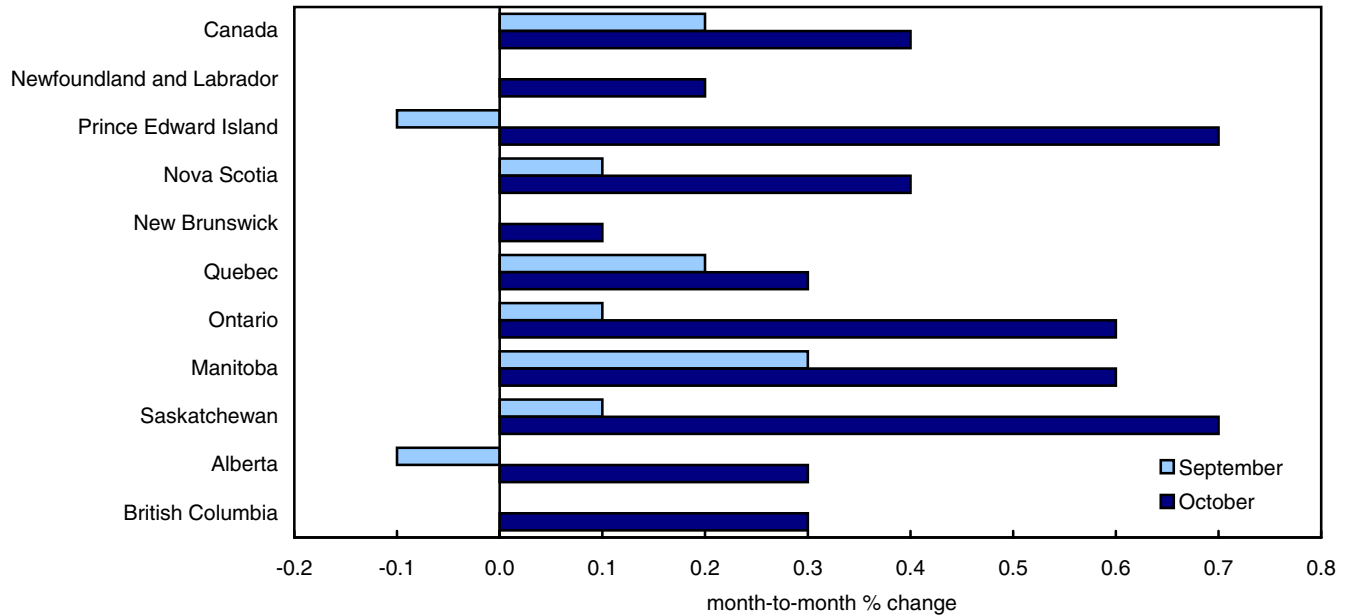

Prices for clothing and footwear rose 2.3% after increasing 3.0% the previous month. Price increases were recorded for men's clothing, women's footwear, and children's clothing.

The recreation, education and reading index fell 0.4% in October. Traveller accommodation prices declined 6.6%.

Food prices fell 0.2% on the heels of a 0.5% decrease in September. Consumers paid less for non-alcoholic beverages, ham and bacon, and potatoes.

At the provincial level, consumer prices posted larger increases in all provinces compared with last month.

Chart 4
Larger increases in consumer prices posted in all provinces, month-over-month

On a month-over-month basis from September to October, the largest increases in consumer prices were recorded in Prince Edward Island and Saskatchewan.

Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, consumer prices rose 0.7% in October following a 0.3% increase in September, the largest increase since January 2006. The transportation index advanced 1.3%, while the shelter index rose 0.6%. In addition, the clothing and footwear index increased 1.2%.

The Bank of Canada’s core index

The Bank of Canada’s core index advanced 1.8% in the 12 months to October, following a 1.5% rise in September.

On a month-to-month basis, the core index prior to seasonal adjustment rose 0.4% in October, after increasing 0.2% in September.

The seasonally adjusted monthly core index rose 0.3% from September to October following a 0.1% increase the previous month.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Alcoholic beverages and tobacco products	3.1	3.1	4.2	4.2

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

- The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

- The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. 4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2009, for selected groups of consumer goods and services

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2009. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Halifax	Ottawa
Montréal	Toronto
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Vancouver	Edmonton

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2009.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
