Highlights

- Consumer prices rose 2.2% in the 12 months to February, following the 2.3% increase posted in January. On a seasonally adjusted monthly basis, consumer prices remained unchanged in February.

Briefing notes

Highlights:

- Consumer prices rose 2.2% in the 12 months to February following the 2.3% increase posted in January. On a non-seasonally adjusted monthly basis, consumer prices rose 0.3%, matching the increase recorded in January.

All-items Consumer Price Index (CPI):

- Energy prices rose 10.6% during the 12 months to February, after posting a 9.0% increase the previous month. Gasoline prices continued to increase in February, rising 15.7%, after recording a 13.0% increase in the 12 months to January.
- Excluding gasoline, the Consumer Price Index (CPI) rose 1.6% in the 12 months to February, compared to a 1.8% increase in January.
- On a seasonally adjusted monthly basis, consumer prices held steady from January to February, after a period of seven consecutive monthly increases. The transportation index, which includes gasoline, increased 0.2% in February, a slower rate of growth than the 1.0% increase observed in the previous month. The food index rose 0.2% in February, following a 0.4% increase in January. The clothing and footwear index posted a decline of 0.1%, after falling 1.2% in January.

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+15.7%)
- Food purchased from restaurants (+2.6%)
- Passenger vehicle insurance premiums (+4.0%)
- Homeowners' replacement cost (+3.5%)
- Electricity (+4.3%)

Main downward contributors:

- Traveller accommodation (-10.7%)
- Mortgage interest cost (-2.4%)
- Travel tours (-8.1%)
- Women's clothing (-4.8%)
- Purchase of passenger vehicles (-0.9%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Travel tours (+9.8%)
- Women's clothing (+2.9%)
- Fresh vegetables (+4.4%)
- Bakery products (+2.1%)
- Gasoline (+0.6%)

Main downward contributors:

- Purchase of passenger vehicles (-1.2%)
- Electricity (-2.2%)
- Fresh fruits (-5.2%)
- Mortgage interest cost (-0.4%)
- Non-alcoholic beverages (-2.3%)

Analysis

Consumer prices rose 2.2% in the 12 months to February, following the 2.3% increase posted in January.

Chart 1
The 12-month change in the CPI and the CPI excluding gasoline

Energy prices rose 10.6% during the 12 months to February, after posting a 9.0% increase the previous month. Gasoline prices continued to increase in February, rising 15.7%, after recording a 13.0% increase in the 12 months to January.

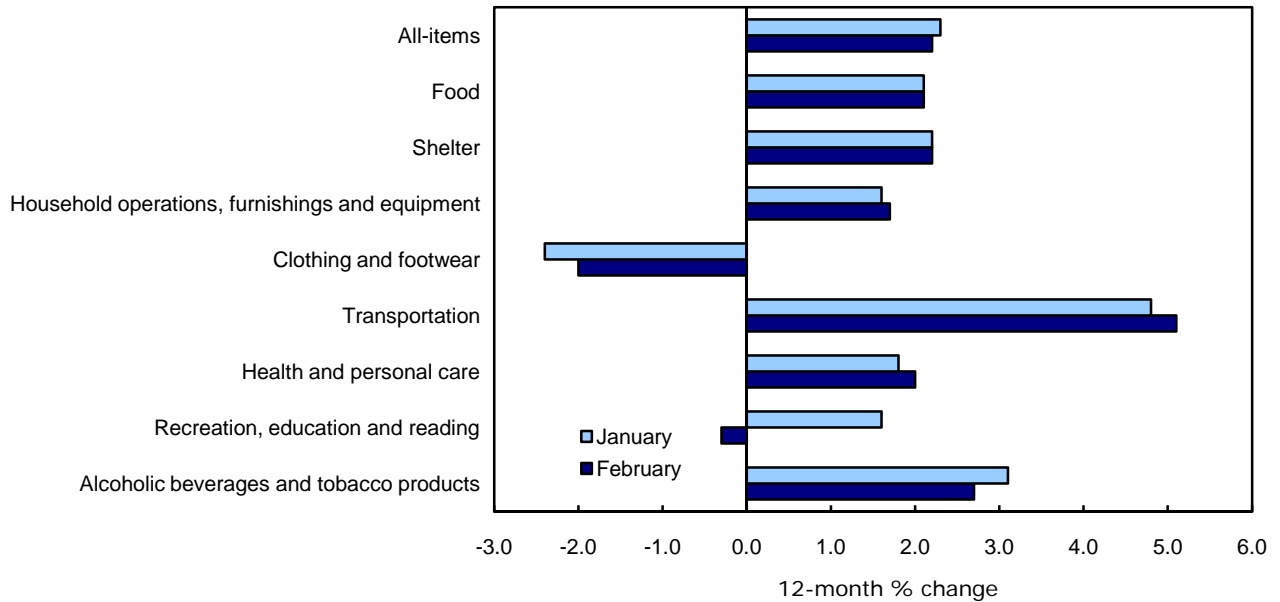

Excluding gasoline, the Consumer Price Index (CPI) rose 1.6% in the 12 months to February, compared with a 1.8% increase in January.

12-month change: Increases in six of the eight major components

On a year-over-year basis, prices increased in six of the eight major components of the CPI in the 12 months to February.

The largest increase occurred in the transportation component, where prices rose 5.1% in the 12 months to February, after a 4.8% increase in January.

Chart 2
Prices up in six of eight major components

In addition to higher gasoline prices in the 12 months to February, consumers paid 4.0% more in passenger vehicle insurance premiums. They also paid more for air transportation but less for the purchase of passenger vehicles.

Shelter costs rose 2.2% in February, matching the increase in January. Homeowners' replacement cost increased 3.5% in the 12 months to February. Consumers paid more for electricity as well as for fuel oil and other fuels.

However, the mortgage interest cost index, which measures the change in the interest portion of payments on outstanding mortgage debt, continued to decrease. Consumers also paid less for natural gas.

Food prices went up 2.1% in the 12 months to February, identical to the increase in January. Food purchased from stores increased 2.0% in February. Prices rose for bread, unsweetened rolls and buns as well as for confectionery. Consumers paid 2.6% more for food purchased from restaurants.

Prices for household operations, furnishings and equipment increased 1.7% between February 2010 and February 2011. Within this component, higher prices were recorded for several items, notably for child care, domestic services and Internet access.

Prices for health and personal care advanced 2.0% in February, on the heels of a 1.8% rise in January. Consumers paid more for dental care and non-prescribed medicines, while prices for prescribed medicines fell.

For clothing and footwear, prices declined 2.0% in February, following a 2.4% decrease in January. Consumers paid less for women's clothing and children's clothing.

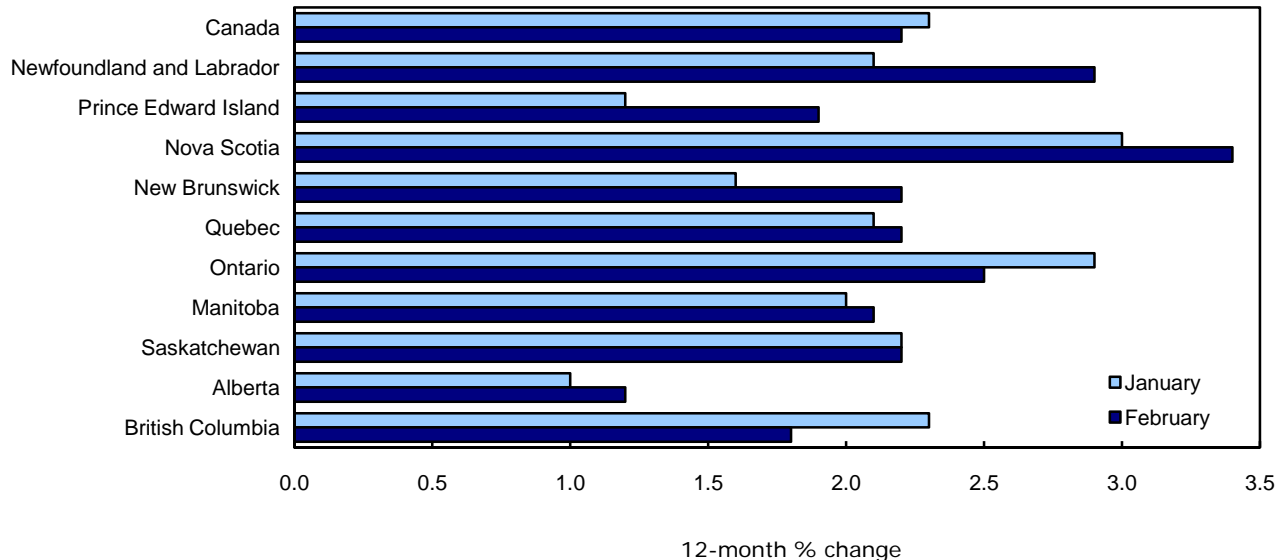

The recreation, education and reading price index decreased 0.3% in the 12 months to February, after increasing 1.6% in the previous month. Traveller accommodation was among the main contributors to this decrease. In February 2010, when Vancouver was hosting the Winter Olympics, prices for hotel rooms were much higher than they were in the same month this year. Consumers also paid less for travel tours in February 2011 compared with February last year.

The provinces

Consumer prices rose in every province between February 2010 and February 2011. Drivers faced double-digit price increases for gasoline in all provinces except Manitoba.

In the 12 months to February, the largest increases in consumer prices were observed in Nova Scotia and Newfoundland and Labrador. In those provinces, fuel oil and other fuels are used more extensively for home heating.

Chart 3
Consumer prices increase in all provinces, year-over-year

In Ontario, consumer prices rose 2.5% in the 12 months to February, after advancing 2.9% in January. More than half of the 0.4 percentage point decrease can be attributed to a smaller year-over-year increase in electricity prices in February compared to January. Electricity prices increased 1.1% in February, much less than the 10.4% increase recorded the month before.

Gasoline prices rose 18.3% in Ontario following a 15.6% increase in January. Consumers in Ontario also paid more for passenger vehicle insurance premiums.

Consumer prices in Quebec increased 2.2% in the 12 months to February, following the 2.1% increase in January. Prices for gasoline rose 15.8%. Prices for fuel oil and other fuels also increased.

Prices in British Columbia went up 1.8% in the 12 months to February, following the 2.3% increase in January. Consumers paid 12.6% more for gasoline and 7.8% more for food purchased from restaurants. Conversely, consumers paid less for traveller accommodation.

In Alberta, prices rose 1.2% in February, following a 1.0% increase in January. Consumers in Alberta paid 15.3% more for gasoline. Electricity prices also rose.

Non-seasonally adjusted monthly CPI continues to increase

Consumer prices before seasonal adjustment rose 0.3% in February matching the increase in January.

On a monthly basis, prices increased in February in five of the major CPI components: recreation, education and reading; clothing and footwear; food; household operations, furnishings and equipment as well as health

and personal care. Prices remained unchanged in the shelter component. Conversely, prices decreased in the transportation and in the alcoholic beverages and tobacco products components.

Prices for recreation, education and reading rose 1.1% in February after declining 1.2% in January. Price increases were posted for travel tours and traveller accommodation.

Prices for clothing and footwear went up 1.7% in February after declining 1.0% in January. Consumers paid more for women’s clothing as well as men’s clothing.

Food prices increased 0.3% in February after rising 0.8% in January. Consumers paid higher prices for fresh milk and also for bread, unsweetened rolls and buns.

Prices for household operations, furnishings and equipment rose 0.5% in February after increasing 0.3% in January. Higher prices were recorded for upholstered furniture and child care.

Shelter costs remained unchanged in February, after decreasing 0.1% in the previous month. Prices for electricity and mortgage interest cost declined. Conversely, price increases were recorded for fuel oil and other fuels as well as for natural gas.

Transportation prices decreased 0.2% in February after increasing 1.3% in January. Consumers paid 1.2% less for the purchase of passenger vehicles. However, consumers continued to pay more for gasoline as well as for air transportation in February.

At the provincial level, consumer prices rose in all provinces. In particular, prices rose in Ontario (+0.2%), Alberta (+0.6%), Quebec (+0.3%), and British Columbia (+0.3%).

Chart 4
Consumer prices up in all provinces, month-over-month

Large increases in consumer prices were recorded in New Brunswick and in Prince Edward Island.

Seasonally adjusted monthly CPI

On a seasonally adjusted monthly basis, consumer prices held steady from January to February, after a period of seven consecutive monthly increases. The transportation index, which includes gasoline, increased 0.2% in February, a slower rate of growth than the 1.0% increase observed in the previous month. The food index rose 0.2%

in February, following a 0.4% increase in January. The clothing and footwear index posted a decline of 0.1%, after falling 1.2% in January.

Chart 5
No change in the seasonally adjusted monthly Consumer Price Index in February 2011

The Bank of Canada’s core index

The Bank of Canada’s core index advanced 0.9% in the 12 months to February, following a 1.4% rise in January.

Month-over-month, the core index before seasonal adjustment rose 0.2% in February after remaining unchanged in January.

The seasonally adjusted monthly core index fell 0.1% in February, following a 0.1% increase in the previous month.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2005. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time reference

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2007, the basket reflecting the 2005 expenditure patterns replaced the 2001 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2005 basket as it was reflected in the CPI in May 2007 and the 2001 basket. Because both sets of weights are expressed in April 2007 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2005 and 2001 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

| | 2005 Expenditures | | 2001 Expenditures | |
|-------------------------------------------------|--------------------------|--------------------------------|--------------------------------|--------------------------------|
| | Expressed in 2005 prices | Expressed in April 2007 prices | Expressed in April 2007 prices | Expressed in April 2007 prices |
| | percent | | | |
| Major Components | | | | |
| All-Items | 100.0 | 100.0 | 100.0 | 100.0 |
| Food | 16.9 | 17.0 | 17.1 | 17.1 |
| Shelter | 25.7 | 26.6 | 27.7 | 27.7 |
| Household operations, furnishings and equipment | 11.4 | 11.1 | 10.2 | 10.2 |
| Clothing and footwear | 5.6 | 5.4 | 5.1 | 5.1 |
| Transportation | 19.6 | 19.9 | 20.2 | 20.2 |
| Health and personal care | 4.8 | 4.7 | 4.4 | 4.4 |
| Recreation, education and reading | 13.0 | 12.2 | 11.2 | 11.2 |
| Alcoholic beverages and tobacco products | 3.1 | 3.1 | 4.2 | 4.2 |

1. Figures may not add to 100% due to rounding.

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The measure of Core CPI excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on Core CPI, please consult the Bank of Canada Web site. <http://www.bankofcanada.ca/en/inflation/index.htm>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition)) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Explanatory notes for tables

Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

and

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2005 Consumer Price Index (CPI) basket weights at April 2007 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-1

1. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.
2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The measure of core Consumer Price Index (CPI) excludes from the all-items CPI the effect of changes in indirect taxes and eight of the most volatile components identified by the Bank of Canada: fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies. For additional information on core CPI, please consult the Bank of Canada Web site: <http://www.bankofcanada.ca/en/inflation/index.htm>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.
2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1 and 8-2

1. The annual index level is the average of the 12 individual monthly indexes. The percentage change for a given calendar year is calculated using the annual average indexes.

Table 9 The Consumer Price Index, major components, selected sub-groups and special aggregates, provinces, Whitehorse and Yellowknife, not seasonally adjusted

Tables 9-1, 9-2, 9-3, 9-4, 9-5, 9-7, 9-8, 9-9, 9-10 and 9-11

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-6

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".

2. Food expenditure information below the aggregate level of "food purchased from stores" was unavailable after 2001. To obtain 2005 basket weights for food categories under this aggregate, expenditures of 2001 for each food category were adjusted to reflect price movements to 2005. However data from the 2005 Survey of Household Spending were used to update the weight at the major component level of "food" compared to all other components.
3. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
4. Over the previous two years, Statistics Canada has updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. In 2008, this quality adjustment exercise will be reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. Subsequent to April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.
2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Users of the urban centre indexes should note that, effective July 2007, Statistics Canada has corrected the weights of some urban centres that were in error in the Consumer Price Index 2005 basket update. The weights of St. John's, Charlottetown, Halifax, Saint John, Québec City, Montréal, Ottawa, Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Victoria were adjusted, while those of Toronto, Vancouver, Whitehorse, Yellowknife and Iqaluit were not. With this correction, the July 2007 level of each urban centre index has been restored to reflect the correct movement for May 2007 and June 2007. The published urban centre indexes for May and June 2007 will remain unchanged. The calculation of urban centre indexes is separate from the calculation of the provincial and national indexes. Therefore, the correction made to the urban centre weights has no effect at all on the provincial or national indexes. Published weight documentation was also not affected.
3. The annual index level is the average of the 12 individual monthly indexes.
4. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 14 Average retail prices, monthly, Canada

1. Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of retail price differentials, as of October 2009, for selected groups of consumer goods and services

Purpose and Scope

Table 15 shows estimates of retail price differences between 11 Canadian cities in all 10 provinces, as of October 2009. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

| | |
|--------------------------|----------|
| St. John's | Halifax |
| Charlottetown-Summerside | Halifax |
| Saint John | Halifax |
| Halifax | Ottawa |
| Montréal | Toronto |
| Ottawa | Toronto |
| Toronto | Winnipeg |
| Regina | Winnipeg |
| Edmonton | Winnipeg |
| Vancouver | Edmonton |

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final retail prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city retail price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2005 consumer expenditure data.

The all-items Inter-city index for a particular city is compared to the average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2005 basket weights at April 2007 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2009.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.
