To access this product

This product, Catalogue no. 62-007-X, is available free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select "Publications" > "Free Internet publications."

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.ca under "About us" > "Providing services to Canadians."

Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Note to users

The third quarter 2005 issue of publication 62-007-X *Capital Expenditure Price Statistics* was the first to be produced in electronic format.

Analysis contained in this publication now also refers to selected construction material series found in table 2-1, Industrial Product Price Indexes, by Commodity. These indexes give an indication of factory gate price movement for those manufacturers who specialize in producing construction materials.

With the release of the May 2003 New Housing Price Index (NHPI) (table 5), Statistics Canada converted the time base of these indexes from 1992=100 to 1997=100.

The new 1997=100 NHPI series is available retroactively from January 1981 in CANSIM table 327-0005 but has different databank numbers. The 1992=100 based NHPI continues to appear in table 327-0005, however, the 1992=100 based index has not been updated after April 2003. Since the 1997=100 index has been mathematically rebased between January 1981 and April 2003, the index movement over this period is the same for the 1992=100 and 1997=100 series. To assist users, rebasing factors which will help users link the new series to the old are found in Appendix I.

In the 1997=100 NHPI series, the methodology used for aggregating individual price quotes to metropolitan area, regional and national level indexes has changed. Other areas of index methodology did not change.

All series in this publication are now identified by 'v' number. For 'D' or 'P' number concordance please refer to appendices.

For more information contact the Client Services Unit, Prices Division (tel: (613) 951-9606; or toll free at 1 866 230-2248; fax (613) 951-1539; email: prices-prix@statcan.ca).

3. Machinery and equipment price indexes (1997=100)	15
4. Machinery and equipment price indexes by industry of purchase	16

Highlights

First Quarter 2008

- The New Housing Price Index (1997=100) rose 1.1% in the first quarter of 2008, up from the previous increase of 0.8%. Prices remained fairly stable across the country with the highest increases seen in the Atlantic Region (+2.4%), followed by Quebec (+ 1.7%), Ontario (+1.5%), British Columbia (+0.5%) and the Prairie Region (+0.2%).
- The composite price index for non-residential building construction increased 2.6% in the first quarter to 165.7 (1997=100) compared with the previous quarter, and stood 8.7% higher compared with the first quarter of 2007. The quarterly increase was mostly the result of higher labour, materials and fuel costs.
- The Machinery and Equipment Price Index (MEPI) stood at 85.2 (1997=100) in the first quarter, up 1.7% from the fourth quarter 2007. The import component index rose 2.8%, while the domestic index edged up 0.1%. Compared with the first quarter 2007, the total MEPI was down 8.6%, as the import index decreased 12.4%, while the domestic index fell 1.7%.

Introduction

This report contains measures of price change for four major categories:

1. elements of construction costs
2. outputs of construction industries
3. capital expenditures
4. consulting engineering

Elements of construction costs include price indexes for the industries that produce most of the construction materials in Canada and unionized building trades workers.

Measures of price change for the outputs of construction industries cover houses (table 5), apartment construction (table 6) and selected non-residential buildings (table 7).

Price changes for capital expenditures are classified, as in the System of National Accounts, into construction and machinery and equipment. When combined with overhead costs, they become plant price indexes. Measures applying to total capitalized cost for certain categories of investment are shown in table 9 for electric utilities.

Consulting Engineering Services Price Indexes (table 10) are published for ten fields of specialization as well as for regional, domestic and foreign markets.

Uses

These measures are useful in analysing price change in construction and fixed capital formation, for contract escalation and for estimates of reproduction cost, either for recosting budgets or for revaluing fixed assets. Data quality, concepts and methodology describing the concepts and practices used in price index preparation are included.

Index formula

Price indexes in this publication have been calculated using either a fixed weight formula or the Chain-Laspeyres index formula of the following general type. (See I)

Fixed weight

$$I_t = \sum_{i=1}^n W_i (p_{t/o})_i$$

$$W_i = \frac{(P_o \cdot Q_k)_i}{\sum_{i=1}^n (P_o \cdot Q_k)_i}; \quad \sum_{i=1}^n W_i = 1.00$$

Where,

I_t = price index in time t relative to time base period o

W_i = relative importance of the i -th component

$(P_{t/o})_i$ = price relative of the i -th component in time t
relative to time base period o

$(P_o.Q_k)_i$ = total expenditure in period k on the i -th
component expressed in base period prices

$\sum_{i=1}^n$ = summation over all components
 $i = 1, 2, \dots, n.$

Chain-Laspeyres

$$I_t = \frac{\sum_{i=1}^n I_{i(t)} W_{i(t-1)}}{\sum_{i=1}^n I_{i(t-1)} W_{i(t-1)}} \times \frac{\sum_{i=1}^n I_{i(t-1)} W_{i(t-2)}}{\sum_{i=1}^n I_{i(t-2)} W_{i(t-2)}} \times \dots = \frac{\sum_{i=1}^n I_{i(t)} W_{i(t-1)}}{\sum_{i=1}^n I_{i(t-1)} W_{i(t-1)}} \times I_{(t-1)}$$

Where,

$I_{i(t)}$ = Price index of the i -th component in time t which
may also be calculated in a similar manner to I_t

$W_{i(t)}$ = Relative importance of the i -th component in time t

$$\sum_{i=1}^n W_i = 1.00$$

Note in the above that the Chain-Laspeyres index formula is used to reflect the changing relative importance of index component. The above example showing a single level of index aggregation can be extended to two or more levels.

Availability of indexes

Unless otherwise stated, statistics contained in this publication are available from the time reference period to the present. Most figures printed here are also accessible on CANSIM, Statistics Canada's machine readable data base and retrieval system. Availability of data on CANSIM is announced in the Statistics Canada Daily (on the Internet). Monthly and quarterly data are released 5-6 weeks and 6-8 weeks following the end of the reference period, respectively. In the interim, index numbers may be obtained from the regional offices, directly from the Prices Division, or from CANSIM. CANSIM Matrix and data bank access code numbers are provided in each table of this publication.

Indexes available through cost recovery

Construction Building Materials Price Index, Residential and Non-Residential and Construction Machinery and Equipment Price Index (Imported) are available on a cost recovery basis.

For certain terminated series where continuity could not be assured, a proxy series has been created as a possible alternative, e.g. Chemical and Mineral Process Plant Price Index.

Revisions

Price indexes are aggregations of representative price movements combined as weighted averages. Revisions to published weights are usually restricted to major renovations of statistical series. Such changes are described in technical notes available with the first release of a new or revised series of indexes. Exceptions to this practice are stated in the Data quality, concepts and methodology section.

Revisions to prices are, on the other hand, a regular part of index production. The symbol "r" only appears when revisions have been made outside the limits normally applying for the table in question.

See individual survey revision policies in Data quality, concepts and methodology section.

Analysis - First Quarter 2008

Industrial Product Price Index, Selected Construction Materials Series

(See table 2)

In the first quarter of 2008, the four largest quarterly price changes were increases for structural steel shapes (+11.0%) and sheet, strip and plate carbon steel (+ 8.3%) and decreases for plywood from Douglas fir (-5.9%) and plywood from other softwood (-5.7%).

The price level for structural steel shapes, which had begun to increase in December, continued to rise in January and saw a strong increase in February. Iron and steel scrap, which is of some importance as input into the production of the steel used for structural steel shapes, also began to rise in December with a very sharp increase being observed in January 2008.

Prices for both plywood from Douglas fir and plywood from other softwood, which had begun to decline in the previous quarter, fell throughout the first quarter.

Prices for sheet, strip and plate carbon steel have been increasing since December 2007. After falling the last two quarters of 2007 they jumped 8.3% in the first quarter of 2008 over the previous quarter.

The four largest year-over-year changes included one increase, metal roofing and siding (+7.9%), and three declines, they being plywood from Douglas fir (-7.8%), lumber, sawmill and other wood products (-7.7%) and plywood from other softwood (-7.1%).

The year-over-year change in the price of metal roofing and siding rose to +7.9% from its level of +7.5% in the third and fourth quarters of 2007. However, the actual price level of the commodity has shown little change since its increases of April and June of 2007.

The year-over-year change in the price of plywood from Douglas fir declined to -7.8% from -1.3% in the last quarter of 2007. Its last peak was +4.8% in the third quarter of 2007.

The year-over-year change in the price of lumber, sawmill and other wood products also declined to -7.7%, dropping from -4.1% in the last quarter of 2007. It had recovered to -1.6% in the third quarter of 2007. Since March 2007, the price level for the commodity has declined in nine of the twelve months. Lumber prices are suffering from the strong Canadian dollar and weak U.S. housing starts.

Similarly, the year-over-year change in the price of plywood from other softwood declined to -7.1% from -2.9% in the fourth quarter of 2007. Its last peak was +6.9% in the third quarter of 2007.

Construction Union Wage Rates Index

(See table 3)

In the first quarter of 2008 the Canada Total Construction Union Wage Rates Index (including supplements) remained unchanged at 140.3 (1992=100) compared with the revised previous quarter, and was 0.9% higher compared with the revised first quarter of 2007.

On a regional basis, the Atlantic Region, the Quebec Region, the Ontario Region, the Prairie Region and the British Columbia Region all remained unchanged from the previous quarter.

Chart 1
Construction union wage rate indexes, basic rate plus supplements, Canada and selected census metropolitan areas (CMAs)

New Housing Price Index

(See table 5)

The New Housing Price Index (1997=100) rose 1.1% in the first quarter of 2008, up from the previous increase of 0.8%. Prices remained fairly stable across the country with the highest increases seen in the Atlantic Region (+2.4%), followed by Quebec (+1.7%), Ontario (+1.5%), British Columbia (+0.5%) and the Prairie Region (+0.2%).

Material and labour costs have contributed to increases in the Atlantic Region. St. John's (+4.1%) had the largest increase followed by Halifax (+2.4%), Charlottetown (+1.2%) and Saint John, Fredericton and Moncton (+0.6%).

In Quebec, both Québec City (+1.2%) and Montréal (+1.7%) registered increases. High demand, as well as higher material costs resulted in the price increase in Québec City. Strong market conditions, which allowed builders to increase list prices, coupled with higher materials and labor costs contributed to the price increase in Montréal.

Prices rose in all metropolitan areas surveyed in Ontario. Favourable market conditions, along with higher prices for labour, building materials and land were among the reasons for the increases. Ottawa-Gatineau (+2.0%), along with St. Catharines-Niagara (+2.0%), recorded the highest increase. This is followed by Hamilton (+1.7%) and Greater Sudbury and Thunder Bay (+1.7%). Toronto and Oshawa (+1.5%) continued to show price increases while Kitchener (+1.4%) turned positive after last quarter's price decline. London (+0.9%) and Windsor (+0.6%) were among those with the lowest price gain.

In British Columbia, both Vancouver (+0.5%) and Victoria (+0.4%) saw increases. Although price advances remain in effect for both cities, Victoria only saw a moderate price rise due to competitive market conditions among builders while builders in Vancouver increased their lot prices as a result of stronger demand.

In the Prairie Region, Saskatoon (+9.1%) took the lead in price hikes followed by Regina (+5.6%), Winnipeg (+1.2%) and Calgary (+0.6%). The price increase is mainly caused by rising material and labor costs and strong market demand. Edmonton (-0.4%), however, experienced its first price decline since the fourth quarter of 2000 as a result of excess supply in the market.

Chart 2
New housing price indexes, total (house and land), Canada and selected metropolitan areas

Apartment Building Construction Price Index

(See table 6)

The composite price index for apartment building construction increased 2.2% from the fourth quarter of 2007 to 161.0 (1997=100) in the first quarter, up 7.8% from the first quarter of 2007. The quarterly increase was mostly the result of higher labour, materials and fuel costs.

Edmonton recorded the highest quarterly change (+3.3%), followed by Toronto and Ottawa–Gatineau, Ontario part (both +2.5%), Calgary (+2.3%), Vancouver (+2.1%), Montréal (+2.0%) and Halifax (+1.2%).

Edmonton also experienced the highest gain (+13.3%) from the first quarter of 2007, followed by Calgary (+11.0%), Vancouver (+9.8%), Toronto (+6.1%), Montreal (+5.8%), Ottawa–Gatineau, Ontario part (+5.6%) and Halifax (+3.8%).

Non-residential Building Construction Price Index

(See table 7)

The composite price index for non-residential building construction increased 2.6% in the first quarter to 165.7 (1997=100) compared with the previous quarter, and stood 8.7% higher compared with the first quarter of 2007. The quarterly increase was mostly the result of higher labour, materials and fuel costs.

Edmonton recorded the highest quarterly change (+3.5%), followed by Toronto and Ottawa–Gatineau, Ontario part (both +2.8%), Calgary (+2.6%), Montréal (+2.4%), Vancouver (+2.0%) and Halifax (+1.3%).

Edmonton also had the largest change (+13.4%) from the first quarter of 2007, followed by Calgary (+10.9%), Vancouver (+10.0%), Toronto (+7.2%), Ottawa–Gatineau, Ontario part (+6.6%), Montréal (+6.2%) and Halifax (+5.2%).

Machinery and Equipment Price Index

(See table 8)

The Machinery and Equipment Price Index (MEPI) stood at 85.2 (1997=100) in the first quarter, up 1.7% from the fourth quarter 2007. The import component index rose 2.8%, while the domestic index edged up 0.1%. Compared with the first quarter 2007, the total MEPI was down 8.6%, as the import index decreased 12.4%, while the domestic index fell 1.7%.

In the first quarter, all industries recorded increases in prices of machinery and equipment purchased. The manufacturing sector (+2.4%) contributed the most to the total MEPI quarterly increase. Among the sector's subcomponents, the largest contributors to the quarterly increase were transportation equipment manufacturing (+2.3%), primary metal and fabricated metal product manufacturing (+2.2%) and paper manufacturing (+2.0%). The second largest contributor to the total quarterly increase was other services, excluding public administration (+1.4%), with its sub-component, information and cultural industries, rising 1.2%.

Among commodities, price increases for construction machinery (+3.4%) and other industry specific machinery (+3.1%) were the largest contributors to the quarterly increase.

The US dollar increased 2.3% against its Canadian counterpart in the first quarter of 2008.

Chart 3
Machinery and equipment price indexes (1997=100)

**Chart 4
Machinery and equipment price indexes by industry of purchase**

Electric Utility Construction Price Index

(See table 9)

Annual 2006 (final) and the annual 2007 (preliminary)

Construction costs for distribution systems increased 3.5% in 2007. The increase in the material component for this period (+6.5%) was the major contributor to this change. The final 2006 data for distribution systems represented an advance of 6.6% over 2005.

Construction costs for the transmission line system series rose 3.9% in 2007 compared with a 4.0% increase for all of 2006. The transmission line component climbed 2.9% during the same period in 2007, while in 2006 there was a 4.2% annual gain. The rise in prices of materials (+4.7%) significantly contributed to this increase. The substation component rose by 4.5% in 2007, following a 3.8% increase the previous year. The station equipment subcomponent posted the largest gain (+5.3%).

Consulting Engineering Services Price Index

(See table 10)

2006 (preliminary data)

The Consulting Engineering Services Price Index (CESPI) is now available for 2006. The CESPI measures the change in the total price of engineering and consulting services, as well as changes in the wage rate and realized net multiplier components. Detailed indexes are available for fields of specialization and for regional, domestic and foreign markets.

The Canada total CESPI for 2006 was 127.9 (1997=100), up 3.4% from the revised index of 123.7 for 2005.

Infrastructure Construction Price Index

An analytical price index series measuring annual changes in the cost of municipal infrastructure construction funded by development charges has been developed by Statistics Canada on behalf of the City of Ottawa. The annual index for 2007 was 124.7 (2001 =100), an increase of 4.4% over the annual index of 119.5 for 2006. The annual indexes for 2005, 2004, 2003 and 2002 were 112.8, 107.7, 105.1 and 102.2 respectively as previously published.

- *Producer price index, services*

Statistical tables

Table 1
Industrial product price indexes, by industry

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Annual average
	1997=100												
Veneer and plywood mills (v3822626)													
- 321211, 321212													
2005	108.6	110.1	106.8	101.2	95.5	94.9	93.3	91.7	95.9	96.8	92.2	95.0	98.5
2006	95.7	96.1	95.9	95.6	94.7	90.9	91.0	92.2	96.3	94.5	94.6	95.7	94.4
2007	96.5	94.9	94.8	94.3	91.7	92.1	95.2	95.1	96.3	94.7	90.7	91.0	93.9
2008	90.6	89.2	88.6
Asphalt paving, roofing and saturated materials manufacturing (v3822652)													
- 32412													
2005	129.4	130.8	137.9	141.3	142.1	142.4	143.8	146.0	147.2	146.8	144.1	139.3	140.9
2006	142.7	146.2	145.0	152.0	161.0	168.4	174.1	177.6	176.1	167.6	155.7	150.6	159.8
2007	148.8	153.6	157.0	158.4	161.1	161.5	162.6	160.4	157.2	153.8	151.1	148.5	156.2
2008	149.6	150.3	153.5
Ventilation, heating, air-conditioning and commercial refrigeration equipment manufacturing (v3822735) - 3334													
2005	107.2	107.4	107.3	107.4	107.7	107.6	107.6	107.6	107.3	107.3	107.3	107.2	107.4
2006	107.4	107.4	107.5	107.5	107.5	107.5	107.6	107.7	108.0	108.2	108.3	108.4	107.8
2007	108.6	108.6	108.5	108.3	108.1	108.3	108.0	108.0	107.8	107.7	107.7	108.0	108.1
2008	108.1	108.1	108.1
Household appliance manufacturing (v3822754) - 3352													
2005	103.5	103.7	103.7	103.7	103.8	103.3	103.5	103.5	103.3	103.3	103.3	103.3	103.5
2006	103.7	103.8	103.5	102.8	102.7	102.7	103.4	103.5	103.5	103.5	104.2	104.3	103.4
2007	104.3	104.1	104.0	103.9	103.8	103.7	103.3	103.3	103.2	103.0	103.2	103.3	103.6
2008	103.5	103.4	103.4
Communication and energy wire and cable manufacturing (v3822761) - 33592													
2005	101.0	101.6	102.7	103.4	103.1	104.0	102.9	103.4	105.5	107.9	110.3	110.7	104.7
2006	111.2	113.9	115.2	119.6	128.1	128.9	130.6	130.3	127.1	127.2	125.6	124.2	123.5
2007	121.7	121.9	123.4	128.0	129.3	126.9	126.5	126.1	125.6	125.3	122.3	121.7	124.9
2008	122.5	123.9	123.9
Plastic pipe, pipe fitting and unsupported profile shape manufacturing (v3822675) - 32612													
2005	117.6	118.1	119.5	119.7	119.5	118.3	119.2	119.5	120.8	128.9	130.9	130.6	121.9
2006	131.5	129.8	129.9	128.7	127.9	130.1	128.9	127.9	127.5	127.2	127.3	126.8	128.6
2007	125.3	124.3	124.0	123.2	123.1	121.7	121.0	123.7	121.8	121.4	121.3	121.8	122.7
2008	121.7	121.2	120.7
Ready-mix concrete manufacturing (v3822691) - 32732													
2005	117.4	117.3	117.2	117.4	117.3	117.3	117.4	117.4	117.7	117.9	118.3	118.2	117.6
2006	123.5	123.2	123.8	124.9	124.6	124.6	125.3	124.8	124.7	124.4	124.1	124.3	124.4
2007	128.6	128.9	128.9	129.7	130.2	130.2	130.3	130.2	130.5	131.2	131.2	131.7	130.1
2008	136.2	135.4	135.5
Glass and glass product manufacturing (v3822688) - 3272													
2005	101.2	101.5	101.6	101.6	101.7	101.6	101.5	101.6	100.8	100.9	100.9	100.9	101.3
2006	103.0	103.0	103.4	102.8	102.7	102.4	102.3	102.3	102.8	102.7	102.8	102.8	102.8
2007	103.8	103.8	103.8	103.8	103.4	103.2	103.0	103.1	102.9	102.5	104.0	104.3	103.5
2008	103.2	103.0	103.2
Spring and wire product manufacturing (v3822722) - 3326													
2005	112.7	112.8	112.5	112.4	112.5	112.5	112.0	111.8	111.4	111.4	111.4	111.2	112.0
2006	111.8	111.7	112.2	112.1	111.9	111.8	110.9	110.8	110.8	110.8	110.9	111.1	111.4
2007	111.3	111.3	111.3	111.2	111.1	110.8	110.7	110.9	111.2	110.9	110.8	111.2	111.1
2008	111.2	111.4	112.0
Paint and coating manufacturing (v3822666) - 32551													
2005	117.8	117.8	117.9	118.2	118.3	118.0	118.4	118.9	120.3	121.2	121.9	122.1	119.2
2006	122.6	123.5	124.2	124.5	125.6	125.0	126.4	125.4	125.3	125.2	125.0	125.1	124.8
2007	125.3	126.7	127.2	127.5	127.4	127.6	126.3	126.0	126.3	126.6	126.4	125.9	126.6
2008	127.1	127.4	127.4

Power generation and marine propellers, non-electric (v41232568)						
2005	3661	104.5	106.8	101.9	100.4	103.4
2006	3661	101.2	99.1	100.4	102.9	100.9
2007	3661	108.4	103.5	97.4	92.8	100.5
2008	3661	96.8
Industrial electric equipment, including safety (v41232577)						
2005	3689	106.5	109.3	105.2	104.2	106.3
2006	3689	104.3	102.6	103.7	106.6	104.3
2007	3689	112.4	107.5	103.2	98.9	105.5
2008	3689	102.6
Laboratory and scientific instruments and flight simulators (v41232589)						
2005	4989	103.4	105.4	102.8	101.2	103.2
2006	4989	100.8	98.4	98.6	100.5	99.6
2007	4989	104.5	98.8	94.7	89.7	96.9
2008	4989	93.2
Measuring and controlling instruments (v41232592)						
2005	4999	100.1	101.8	98.7	96.8	99.4
2006	4999	96.3	94.4	94.4	96.0	95.3
2007	4999	99.4	94.5	91.0	86.4	92.8
2008	4999	88.6
Software products development (v41232625)						
2005	5751	97.3	97.6	97.6	94.0	96.6
2006	5751	94.2	92.2	91.8	91.2	92.4
2007	5751	93.2	92.7	91.3	90.1	91.8
2008	5751	90.0

1. W-Level is the working level of commodity aggregation used in the System of National Accounts Input-Output tables.

Table 9
Electric utility construction price indexes

	2001	2002	2003	2004	2005	2006	2007
	1992=100						
Distribution systems (v735224)	129.6	130.5	130.6	131.1	133.6	142.4	147.4
Total direct costs (v735225)	129.8	130.6	130.9	131.3	134.2	144.2	149.8
Materials (v735226)	127.7	127.6	127.8	132.5	138.2	155.0	165.0
Poles, towers and fixtures (v735227)	143.7	143.7	144.1	147.0	147.0	152.4	158.9
Overhead conductors (v735231)	110.8	112.7	107.9	121.2	126.1	149.0	154.6
Street lighting systems and water heaters (v735234)	124.0	126.3	131.4	140.6	156.3	156.2	160.6
Distribution systems equipment (v735238)	124.8	123.3	124.1	125.4	132.4	158.7	174.2
Labour (v735241)	130.7	132.3	132.7	127.2	125.3	127.5	128.0
Construction equipment (v735242)	142.0	145.5	145.5	148.0	157.7	160.0	159.7
Construction indirects (v735247)	128.9	129.9	129.0	129.9	130.4	132.6	134.2
Transmission line systems (v735250)	127.0	129.2	126.4	129.0	130.9	136.2	141.5
Transmission line systems less interest foregone during construction (v735252)	128.1	130.4	127.7	130.4	132.6	137.9	143.4
Transmission lines (v735255)	129.7	131.6	130.8	135.2	136.7	142.4	146.6
Poles, towers, fixtures and overhead conductors (v735257)	131.5	133.8	132.9	138.1	139.6	145.9	150.1
Materials (v735258)	129.3	131.8	131.1	144.7	147.8	157.4	164.8
Installation labour (v735267)	130.7	132.3	132.7	127.2	125.3	127.5	128.0
Installation equipment (v735268)	144.4	147.8	142.0	139.0	142.9	144.6	144.9
Construction indirects (v735278)	122.8	123.4	121.6	122.3	121.3	123.5	125.0
Transmission line less interest foregone during construction (v735283)	130.8	132.9	132.1	136.8	138.6	144.4	148.7
Substations (v735284)	125.4	127.8	124.0	125.4	127.7	132.6	138.6
Main station building (v735286)	127.0	129.9	132.7	140.9	147.6	156.2	167.0
Support structures and fixtures (v735294)	124.1	128.0	129.1	140.2	139.5	141.4	143.6
Station equipment (v735304)	126.4	129.0	122.5	121.2	123.8	129.4	136.2
Equipment (v735305)	129.5	132.0	123.4	121.5	124.1	130.3	138.3
Labour (v735310)	112.7	115.9	118.3	120.1	122.4	125.5	127.2
Construction indirects (v735311)	122.5	123.2	121.3	121.7	120.9	123.0	124.7
Substations less interest foregone during construction (v735316)	126.5	129.0	125.2	126.8	129.2	134.3	140.3

Industrial product price indexes, manufacturing

(CANSIM Tables 329-0038 to 329-0049: 1997=100)

Introduction

Industry price indexes (Catalogue no. 62-011-X) are presented here to give an indication of factory gate price movement for those manufacturers who specialize in producing building materials.

Characteristics

General

These indexes measure changes in shipment selling prices of important commodities sold by major manufacturing establishments. The series calculated for industry indexes are classified under the 1997 North American Industry Classification System (NAICS) whereas those for commodity indexes are classified according to the Principal Commodity Group Aggregates (PCGA) classification.

Prices used

Prices are for shipments, net (discounts allowed) as of the middle of the month, (f.o.b. plant).

Adjustments to prices

Quality adjustments are made for changes in physical characteristics or terms of sale in order to arrive at estimates of pure price change. No adjustments are made for changes in sales taxes.

Weight base

Weights, which determine the relative importance of commodities within each index, were derived from the 1997 Input/Output tables.

Index formula

Price indexes are base-weighted.

Revisions

Generally, indexes are subject to revisions for six months.

Reference documents and further reading

Catalogue no. 62-558-X Industry Price Indexes, Users' Guide

For further information contact Client Services at telephone: 613-951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, Internet e-mail: prices-prix@statcan.ca, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6.

Construction union wage rates and indexes

(Table 327-0004: 1992=100 Wage Rate Indexes monthly 1986 to present; Table 327-0003: Wage Rates monthly 1971 to present)

Introduction

These series measure changes over time in the current collective agreement rates for 16 trades engaged in building construction in 20 metropolitan areas. Union wage rates by trade are also published for 20 metropolitan areas for both the basic rates and rates including selected supplementary payments. Indexes are provided (Table 3-2) for those cities where a majority of trades are covered by current collective agreements.

Characteristics

General

Two rates are indexed: basic rates, indicating the straight time hourly compensation; and basic rates including supplements, such as vacation pay, statutory holiday pay and employers' contribution to pension plans, health and welfare plans, industry promotion and training funds.

Prices used

Wage rates used for these indexes are derived mainly from those published by the various construction labour relations associations across the provinces. Summaries of the signed agreements are provided to Statistics Canada.

Adjustments to prices

None. Rates used are those published in the collective agreements.

Weight base

The weights used for the 1992 based indexes were derived from the 1991 census data. As before, a fixed-basket Laspeyres index formula is used for the 1992 based indexes.

Index formula

Price indexes are base-weighted.

Revisions

Wage rates and indexes are subject to revisions for 30 months. Collective agreement rates are no longer available for the majority of trades for metropolitan areas in Saskatchewan. For the 1992=100 series, these metropolitan areas were excluded from the survey.

Historical data

Details on rates (1971 onwards) and indexes (1971 to 1983 inclusive) for individual trades are available monthly on CANSIM. For the 1981=100 and 1986=100 series, composite indexes by major trade group and region are also generated and stored on CANSIM. The databank numbers are available both in the CANSIM directory or on request.

New housing price indexes 1997 Base

(Table 327-0005, 1997=100 Monthly 1981 to present)

Introduction

This index measures changes over time in the contractors' selling prices of new residential houses, where detailed specifications remain the same between two consecutive periods.

For most metropolitan areas, new house price indexes are available from 1981, although figures from 1969 are recorded for selected areas. The 1997=100 series surveys 21 metropolitan areas to establish monthly indexes relating to the contractors' "total selling price". The survey also collects contractors' estimates of the current cost of the land. These estimates are independently indexed to provide the published series for land. The residual (selling price less land), which mainly relates to the current cost of the structure, is also independently indexed and is presented as the house series. The lots are usually serviced by builders except in Montreal and Quebec City where they are occasionally serviced by municipal governments and therefore the servicing costs do not enter into the contractors' selling price.

Characteristics

General

Prices collected for this index relate to the 15th of the month or the nearest business date. Subsequently, the selling prices are adjusted for any changes in quality of the structure and the serviced lot. This index does not measure shelter costs and price changes for existing houses are excluded from these price surveys.

Commencing in January 1991, the New Housing Price Indexes (NHPI) reflect the termination of the Federal Sales Tax (FST) with the introduction of the Goods and Services Tax (GST). Since this index is based on contractors' selling prices for new homes, the GST paid by the final purchasers is excluded from index calculations.

Prices used

Contractors' mid-month selling prices are collected directly in 21 metropolitan areas through a combination of quarterly visits and telephone contacts in other months.

Adjustments to prices

House prices reported by sample builders are adjusted for changes in quality of both the structures and the serviced lots including intangible variations of location to ensure similarity of specifications.

In cases where the prices reported by sample builders include the net GST payable they are adjusted to reflect prices that are equivalent to contractors' selling prices excluding GST.

Weight base

To prepare a contractors' selling price index for a metropolitan area, price reports from the sample of builders are given equal weights in index calculations. Amongst metropolitan areas, weights are derived from housing completions data.

The same procedure prevails for aggregating the independently derived land and structure series: equal weights within metropolitan areas and proportional weights among metropolitan areas. Weights for metropolitan areas are adjusted annually as described below.

Index formula

A Chain-Laspeyres index formula is used, the weights for which are derived from housing completions for the previous three years valued at prices for the 1997 base year.

Revisions

Indexes as published are final.

Historical data

January 1981 to April 2003 on a 1992 base for 21 metropolitan areas. (CANSIM Table 327-0005)

January 1981 to December 1997 on a 1986 base for 21 metropolitan areas. (CANSIM Table 327-0029)

Apartment building construction price indexes

(Table 327-0040, 1997=100, quarterly, 1988 to present)

Introduction

These indexes measure contractors' selling price change of apartment building construction. The indexes relate to both general and trade contractors' work and exclude the cost of land, land assembly, design, development and real estate fees.

Characteristics

General

In conjunction with Canada Mortgage and Housing Corporation, a typical or model apartment building that had been constructed was selected and 1981 pricing was obtained. Sample items of work-in-place to be subsequently priced were taken from this model. All prices are collected directly by Statistics Canada quantity surveyors and include costs of materials, labour, equipment, relevant federal (until 1991) and provincial taxes and contractors' overhead and profit. Value Added Taxes such as the Federal Goods and Services Tax (GST), the Quebec Sales Tax (QST) and the Harmonised Sales Tax (HST) are not included.

Frequency of pricing

Commencing in the first quarter of 1988, prices are collected quarterly for six census metropolitan areas (CMAs) and the Ontario part of the Ottawa-Gatineau CMA. In the period from 1981 to 1987 prices were collected in the first quarter of each year in Montreal, Toronto, Calgary and Vancouver. In 1986 and 1987 price movement was interpolated to establish annual figures.

Prices used

The prices for work-in-place are obtained through phone surveys with sub-contractors and general contractors, who construct apartment buildings, on the basis that they are bidding on a fixed specification and quantity under current market conditions. Prices include contractors' overheads and profit. Prices for certain materials, labour rates, rental of equipment, municipal charges and sales taxes are obtained from a variety of secondary sources; particularly for the mechanical and electrical trades.

Weight base

Weights are derived from a detailed cost analysis of the model apartment building (a seven story, reinforced concrete structure with 53 units) constructed in 1981 and expressed in 1997 price levels.

Index formula

A fixed weighted formula is used at the CMA level. A Chain- Laspeyres index formula is used for the seven CMA composite levels, for which the weights are derived from building permit data for the previous three years, valued at the price levels of the fourth quarter of the last year.

Revisions

The figures of the most recently published indexes are subject to revision but all other figures are final.

Historical data

There are limited annual data for four CMAs (Montreal, Toronto, Calgary and Vancouver) relating to the first quarter of each year from 1981 to 1987 inclusive.

1988 to 1997 on a 1986 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver). Table 327-0033.

1988 to 2001 on a 1997 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver). Table 327-0002.

1988 to current quarter on a 1997 base for seven CMAs (Halifax, Montreal, Ottawa, Toronto, Calgary, Edmonton and Vancouver), Table 327-0040.

Reference documents and further reading

Catalogue no. 61-205-X Private and public investment in Canada, intentions, annual

For further information contact Client Services at telephone: 613-951-9606, toll-free: 1-866-230-2248, fax: (613) 951-1539, Internet e-mail: prices-prix@statcan.ca, Prices Division, Statistics Canada, Ottawa, Ontario, K1A 0T6

Non-residential building construction price indexes

(Tables 327-0039 and 327-0040: 1997=100 quarterly 1981 to present)

Introduction

These indexes measure contractors' selling price change of non-residential construction (i.e., commercial, industrial and institutional). The indexes relate to both general and trade contractors' work and exclude the cost of land, design and real estate fees.

Characteristics

General

Sample items of work-in-place to be priced were selected from five different buildings. Three of these buildings (office, warehouse and shopping centre) fall in the category of commercial building, one building (light factory) falls in the category of industrial building and the school falls in the category of institutional building. All prices are collected directly by Statistics Canada quantity surveyors and include costs for materials, labour, equipment, relevant federal (until 1991) and provincial taxes, and contractor's overhead and profit. Value Added Taxes such as the Federal Goods and Services Tax (GST), the Quebec Sales Tax (QST) and the Harmonised Sales Tax (HST) are not included.

Frequency of pricing

Beginning in the first quarter 1988, prices are collected for all 5 models in six census metropolitan areas (CMAs) and the Ontario part of the Ottawa-Gatineau CMA. In the years 1986 and 1987, prices were collected each quarter in Montreal, Toronto and Vancouver for all 5 models. In Halifax and Edmonton, prices were collected semi-annually in the second and fourth quarters and in Ottawa and Calgary, prices were collected semi-annually in the first and third quarters. Price movement was estimated for the intervening quarters.

Prices used

The prices for work-in-place are obtained through phone surveys from sub-contractors and general contractors on the basis that they are bidding on a fixed specification and quantity in the real market and as such, include the current overhead, profit and market conditions. Prices for certain materials, labour rates, rental of equipment, municipal charges and sales taxes are obtained from a variety of secondary sources, particularly for the mechanical and electrical trades.

Weight base

Weights are derived from detailed cost analysis of each structure wherein quantities or values for each model were expressed in 1997 price levels. The office, light factory and school models used were derived from the specifications of structures built in the early 1990's while the warehouse and shopping centre models were derived from the specifications of structures built in the early 1980's.

Index formula

A fixed weighted formula is used at the model level. A Chain-Laspeyres index formula is used for aggregations at the building category, the CMA and seven CMA composite levels, for which the weights are derived from building permit data for the previous three years valued at the price levels of the fourth quarter of the last year.

Revisions

The figures of the most recently published indexes are subject to revision but all other figures are final.

Historical data

1972 to 1983 on a 1976 base for four CMAs (Montreal, Ottawa, Toronto and Vancouver) and three models (Office, Factory and School).

1981 to 1989 on a 1981 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary and Edmonton) and five models.

1986 to 1997 on a 1986 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary, and Edmonton) and five models. Tables 327-0034 and 327-0035.

1981 to 2001 on a 1992 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary, and Edmonton) and five models. Tables 327-0001 and 327-0002.

1981 to current quarter on a 1997 base for seven CMAs (Montreal, Toronto, Vancouver, Halifax, Ottawa, Calgary and Edmonton) and five models. Tables 327-0039 and 327-0040.

Machinery and equipment price indexes

(Tables 327-0041, 327-0042, 1997=100, quarterly, 1997 to present)

Introduction

The Machinery and Equipment Price Index (MEPI) measures price change for annual gross additions to capital for machinery and equipment by industry of purchase. Price indexes are calculated for industries, major groups of industries, and the total for all industries, and are also calculated for commodities. Price movement is measured on a domestic and an import basis.

- The industry and commodity designations used are those of the Input-Output Tables of the Canadian System of National Accounts. The classification system is the 1997 North American Industry Classification System (NAICS).
- Industry total indexes are presented in table 8-1 ; commodity detail is presented in table 8-2.

Characteristics

Prices used

Prices for domestic machinery and equipment are manufacturers' selling prices free on board (FOB) plant on new orders as of the middle of the month.

Prices for imported equipment are represented by the producer price indexes of the U. S. Bureau of Labor Statistics, and by a few price series from other foreign countries.

Adjustments to price indexes

Domestic and foreign price indexes are adjusted for changes in the effective rate of GST. The effective rate is the net GST tax (the tax levied on a commodity in a particular industry minus the rebated portion) divided by the value of the purchase. For most industries, the effective GST rate approaches zero per cent. Foreign price indexes are also adjusted for changes in exchange rates and custom tariffs where applicable.

Derivation of weights

- The expenditure weights for the 51 industries and 106 commodities represent capital investment for the year 1997, valued at 1997 purchaser prices. They were derived from Input-Output data, which were themselves derived largely from the series of capital expenditure by industry, reported in the annual survey, Capital and Repair Expenditures, Actual, Preliminary Actual and Intentions (survey number 2803) Investment and Capital Stock Division.
- In general, below the commodity level of detail, equal weights were assigned to component indexes.

Index formula

From 1997 forward, the MEPI series are fixed-weighted price indexes of the general type described in the introduction to this catalogue, with both the time and weight base being 1997.

Revisions

The most recent four quarters are subject to revision.

Historical data

Historical 1971=100 quarterly series are publicly available on CANSIM in tables 327-0021, 327-0022 and 327-0023.

Historical 1986=100 quarterly series are publicly available on CANSIM in tables 327-0013, 327-0014 and 327-0016.

Electric utility construction price indexes

(Table 327-0011, 1992=100 annual; Indexes are from 1992 to present)

1. Distribution systems
2. Transmission lines systems

Introduction

These indexes measure price change for construction of two separate models of electric utility plant. Each model was developed using project data from major Canadian electric utilities. Each model portrays an average mix of materials, labour and equipment developed from a variety of projects in a specific base period. This modeling technique provides the framework for the development of simulated plant indexes for construction work and machinery and equipment.

Characteristics

General

Direct costs associated with the construction work and machinery and equipment components are represented by various combinations of price index data: construction work indexes are a combination of indexes for work in place for such items as earthwork and structural steel, and indexes covering major material and labour inputs.

Indirect costs covered include interest foregone during construction, and design and administration costs, whose movements are indexed from salary survey data. (An aggregation excluding interest foregone is also available.)

Prices used

Machinery and equipment

For domestic equipment, prices used for machinery and equipment are manufacturers' selling prices. For imported equipment, foreign price indexes are used.

Wage rates

Basic union wage rates are used for construction trades. Employment, earnings and hours survey (SEPH) data on average weekly earnings (including overtime) for salaried employees are used for engineers, technicians, clerks and draftsmen.

Interest foregone during construction

ScotiaMcLeod provincial bond yield average index is used.

Adjustments to prices

Price indexes are not adjusted for the Goods and Services Tax. Price indexes of imported equipment are adjusted for exchange rates and where applicable tariff rates.

Weight base

Indexes 1 and 2

Gross capital additions made by major utilities in the several years prior to 1992 were converted to base year dollar values. This data was then utilized to produce a weighted average expenditure for the classes of construction specified.

Index formula

A fixed-weighted price index formula of the type described in the Introduction of this catalogue was used.

Revisions

Publication year estimates, if shown, represent the first half of the calendar year, January to June. Publication year and previous year estimates are preliminary.

Consulting engineering services price indexes

(Table 327-0007, 1997=100, annually since 1989)

Introduction

The Consulting Engineering Services Price Indexes (CEPI) measure changes in the prices of services provided by consulting engineers. These services encompass advisory and design work as well as, construction or project management. They are provided for many types of projects (fields of specialization), and to both Canadian and foreign clients. Price indexes are published for ten fields of specialization as well as for regional, domestic, and foreign markets.

Characteristics

General

These indexes are produced from annual wage and financial data collected from a judgement sample of consulting engineering firms in Canada (North American Industrial Classification System 54133). The total price indexes (column A) are calculated as the product of wage rate and realized net multiplier indexes (mark-up). The composition of the total price index reflects how firms structure their service contracts. The wage rate and realized net multiplier indexes are published separately in Columns B and C. These indexes provide information on the source of change in the prices of consulting engineering services over time.

Pricing information used

Changes in wage rates

The wage rate indexes are produced from data on the average of annual percentage changes in salaries and wage rates paid to those whose time is charged directly to consulting engineering projects. These indexes measure changes over time in the value of the wage component of contracts for engineering services.

Realized net multiplier

Realized net multipliers are calculated as the ratio of operating revenue from consulting engineering projects at fiscal year-end to project-related expenses. The multiplier indexes measure changes in the profitability of consulting engineering activities in each market and field of specialization.

Derivation of weights

Weights are derived from fee income data from the Annual Survey of Engineering Services that is conducted by Services Industries Division. The total fee income for each field of specialization is prorated by region using the provincial distribution of new construction expenditures from the Survey on Capital and Repair Expenditures that is conducted by Investment and Capital Stock Division. Index weights are revised every two years so that price indexes reflect changes in the relative importance of consulting engineering activity in each field of specialization and region over time.

Index formula

At the most detailed level, the indexes are calculated as chained, unweighted geometric averages of the data received from respondents. With the exception of indexes for the industrial fields of specialization, a Chain-Laspeyres index formula is used to calculate indexes at the total region, Canada and all-market levels. The index for each industrial field of specialization is calculated at the Canada level only using a geometric mean formula. Composite indexes for industrial services by region differ because the mix of industrial projects varies from one regional market to another.

Revisions

The most recent two years of published indexes are subject to revision.

Appendix I

Rebasing factors for New housing, Apartment and Non-residential Building Construction Price indexes

To convert a 1992-based index to a 1997 base, just look for the appropriate rebasing factor in the following tables and multiply each element of the series by that factor. Expressed as a formula, the calculation is:

$$P_{t/97} = f \times P_{t/92}$$

where $P_{t/97}$ is the 1997-based index, f is the rebasing factor and $P_{t/92}$ is the 1992-based index.

Conversely, to convert the 1997-based index to a 1992 base, just look for the appropriate rebasing factor in the following tables and divide each element of the series by that factor. Expressed as a formula, the calculation is:

$$P_{t/92} = P_{t/97} / f$$
