## INTRODUCTION

This Guide presents information of interest to users of data from the 1998 Survey of Household Spending. Data were collected via personal interviews conducted in January, February and March 1999 using a paper questionnaire. Information was gathered about the spending habits, dwelling characteristics and household equipment of Canadian households during 1998. The survey covered private households in the ten provinces and three territories.

This guide includes definitions of survey terms and variables and descriptions of survey methodology and data quality. There is also a section describing the various statistics that can be created using expenditure data (e.g., budget share, market share, and aggregates).

The Survey of Household Spending (first conducted for the 1997 reference year) includes most of the content from the former Family Expenditure Survey and the Household Facilities and Equipment Survey. For more information about the transition from these surveys to the Survey of Household Spending, please contact Client Services (1-888-297-7355 or 613-951-7355; income@statcan.ca), Income Statistics Division.

This guide is intended to accompany the following standard data tables:
62F0031 Detailed Average Household Expenditures for Canada, Provinces/Territories and Selected Metropolitan Areas, 1998

62F0032 Detailed Average Household Expenditures by Household Income Quintile, for Canada and Provinces, 1998

62F0033 Detailed Average Household Expenditure by Housing Tenure for Canada, 1998
62F0034 Detailed Average Household Expenditure by Household Type, for Canada, 1998
62F0035 Detailed Average Household Expenditure by Size of Area of Residence, for Canada, 1998
62F0041 Dwelling Characteristics and Household Equipment for Canada, Provinces/Territories and Selected Metropolitan Areas, 1998

62F0042 Dwelling Characteristics and Household Equipment by Income Quintile for Canada, 1998
62F0043 Dwelling Characteristics and Household Equipment by Housing Tenure for Canada, 1998
62F0044 Dwelling Characteristics and Household Equipment by Household Type for Canada, 1998
62F0045 Dwelling Characteristics and Household Equipment by Size of Area of Residence for Canada, 1998
Other data products from this survey include the publication Spending Patterns in Canada (62-202) and a public-use microdata file. Custom tabulations are also available on a cost-recovery basis subject to data quality and confidentiality constraints. For more information about survey results and related products and services, contact Client Services (613-951-7355; 1-888-297-7355; fax 613-951-3012; income@statcan.ca), Income Statistics Division.

## SURVEY METHODOLOGY

## The Survey Universe

The 1998 Survey of Household Spending was carried out across Canada in the ten provinces and three territories. Those living on Indian reserves and crown lands and official representatives of foreign countries living in Canada and their families were excluded from the survey. Members of religious and other communal colonies, members of the Canadian Armed Forces living in Military Camps and people living in residences for senior citizens, were excluded, as were people living full time in institutions, for example, inmates of penal institutions and chronic care patients living in hospitals and nursing homes. The survey covers about $98 \%$ of the population in the ten provinces. In the Territories, coverage was restricted to $81 \%$ in the Yukon and $91 \%$ in the Northwest Territories (including Nunavut), as defined before April 1, 1999.

Information was not gathered from persons temporarily living away from their families (for example, students at university), because it would be gathered from their families if selected. In this way, double counting of such individuals was avoided.

Data from part-year households were excluded from estimates of household spending. However, these data were included in the estimates for dwelling characteristics and household equipment and in the calculation of the Survey of Household Spending response rate. Data from part-year households are also required as input into Canada's system of National Accounts. Part-year households are comprised entirely of persons who were members of other households for part of the survey year. There were 537 part-year households in the sample in 1998.

## Survey Content and Reference Period

Detailed information was collected about expenditures for consumer goods and services, types of cars and other vehicles owned by households, changes in assets, mortgages and other loans, and annual income. This information was collected for the calendar year 1998 (the survey reference year). Information was also collected about dwelling characteristics (e.g., type and age of heating equipment) and household equipment (e.g., appliances and communications equipment). This type of information was collected as of December $31^{\text {st }}$ of the reference year. Contact Client Services (1-888-297-7355) for information about custom tabulations of this information.

Because the Survey of Household Spending is designed principally to provide detailed information on non-food expenditures, only an aggregate estimate of food expenditure is recorded. Detailed information on food expenditure is provided by the Food Expenditure Survey, which is conducted approximately every four years. It was last conducted in 1996 and the results were published in Family Food Expenditure in Canada, 1996, catalogue number 62-554-XPB.

## The Sample

The sample size for the 1998 Survey of Household Spending was 20,236 eligible households.
The sample for the 1998 Survey of Household Spending was a stratified, multi-stage sample selected from the Labour Force Survey (LFS) sampling frame. Sample selection comprised two main steps: the selection of clusters (small geographic areas) from the LFS frame and the selection of dwellings within these selected clusters. The LFS sampling frame currently uses 1996 Census geography (some preliminary boundaries were used so there may be slight variations from final 1996 geographic boundaries) and 1991 population counts ${ }^{1}$

## Data Collection

[^0]The 1998 Survey of Household Spending was conducted from January to March 1999. Data was collected during a personal interview using a paper questionnaire. A copy of this questionnaire is available on request.

Only a few questions required coding and this was done by the interviewer, was checked by the senior interviewer, and, in many cases, was checked for consistency with the rest of the information on the questionnaire by the automated batch edit system.

## Data Processing and Quality Control

Data entry and automated editing for the 1998 Survey of Household Spending took place in the Statistics Canada regional offices. This allowed respondents to be contacted in the event that more information was required to resolve an inconsistency on their questionnaires.

After data entry, an automated physical edit system checked for data entry errors. Then, data had to pass a two-tier edit system consisting of "must-pass" edits that checked questionnaires for logic and consistency, and "warnings" that indicated that a particular situation was unusual and could require correction. The invocation of either type of edit resulted in the intervention of a member of one of the specially trained edit resolution teams. Further editing of the data set took place in head office where invalid responses were corrected.

Missing responses were imputed using the nearest neighbour method. Statistics Canada's Generalized Edit and Imputation System (GEIS) was used to insert values from donor records having similar characteristics, chosen specifically to fit the variable. For example, total household income was used for most variables; dwelling type, household size and province were also frequently used.

Tabulation for the 1998 Survey of Household Spending was accomplished using a PC/client server-based system. This system provides tools (database querying, searching, and viewing capabilities) for spotting systematic errors.

## Weighting

The estimation of population characteristics from a sample survey is based on the premise that each sampled unit represents a certain number of units in the population. A basic survey weight was attached to each record in the sample to reflect this representation. These basic weights were adjusted for non-response for each of 19 selected metropolitan areas and 41 additional geographical areas and for 17 high income stratas. These 41 additional areas comprise the remaining metropolitan areas, and urban and rural areas based on census definitions (see the 1996 Census Dictionary, catalogue number 92-351-XPE) but do not necessarily correspond exactly.

To increase the reliability of the estimates, weights were adjusted to ensure that estimates on relevant characteristics of the population would respect population totals from sources other than the survey. The first set of totals, for one-person households and multi-person households, was based on projections of number of households using the 1991 Census of Population (adjusted for net undercoverage) and the Labour Force Survey estimates, calculated at the provincial level. The second set of totals, based on population projections for December 1998 from Statistics Canada's Demography Division, were the number of persons under 15, the number of persons between 15 and 64, and the number of persons over 64 at the provincial level as well as for the selected metropolitan areas. For the three territories, Yukon, Northwest Territories and Nunavut, and for Whitehorse and Yellowknife, only two age groups were used, number of persons under 15, and number of persons 15 and over.

## DATA QUALITY

## Sampling Error

Sampling errors occur because inferences about the entire population are based on information obtained from only a sample of the population. The sample design, the variability of the data, and the sample size determine the size of the sampling error. In addition, for a given sample design, different methods of estimation will result in different sampling errors.

The design for the 1998 Survey of Household Spending was a stratified multi-stage sampling scheme. The sampling errors for multi-stage sampling are usually higher than those for a simple random sample of the same size. However, the operational advantages outweigh this disadvantage and the fact that the sample is also stratified improves the precision of estimates.

Data variability is the difference between members of the population with respect to spending on a specific item. In general, the greater these differences are, the larger the sampling error will be. In addition, the larger the sample size, the smaller the sampling error.

## Standard Error and Coefficient of Variation

A common measure of sampling error is the standard error (SE). Standard error is the degree of variation in the estimates as a result of selecting one particular sample rather than another of the same size and design. It has been shown that the "true" value of the characteristic of interest lies within a range of $+/-1$ standard error of the estimate for $68 \%$ of all samples, and $+/-2$ standard errors for $95 \%$ of all samples.

The coefficient of variation (CV) is the standard error expressed as a percentage of the estimate. It is used to indicate the degree of uncertainty associated with an estimate. For example, if the estimate of the number of households having a given dwelling characteristic is 10,000 households, and the corresponding CV is $5 \%$, then the "true" value is between 9,500 and 10,500 households, $68 \%$ of the time and between 9,000 and 11,000 households, $95 \%$ of the time.

Standard errors for the 1998 Survey of Household Spending were estimated using the jackknife technique which leads to a slight over-estimation and is, thus, conservative. For more information, refer to the Statistics Canada publication, Methodology of the Canadian Labour Force Survey, catalogue 71-526XPB.

Coefficients of variation are presented in Tables 1 and 2.

## Data Suppression

For reliability reasons, estimates with CVs greater than $33 \%$ should be suppressed. Since CVs are not calculated for all estimates, data suppression for the Survey of Household Spending has been based on a relationship between the CV and the number of households reporting expenditure on an item. Analysis of past survey results indicates that CVs reach this level when the number of households reporting an item drops to about 30. Therefore, data have been suppressed for spending on items reported by fewer than 30 households.

However data for suppressed items do contribute to summary level variables. For example, the expenditure for a particular item of clothing might be suppressed but this amount forms part of the aggregate expenditure estimate for clothing.

## Approximation of Coefficient of Variation

It is possible to approximate the CV of estimates not represented in Tables 1 and 2 using a relationship between the CV and the number of households that reported spending on an item or having a given dwelling characteristic. Previous studies have shown that the CV of the estimate of an item tends to decrease in proportion to the square root of the number of households having a given dwelling characteristic.

As an example, according to Table 1, the estimated CV for the average household expenditure on rented living quarters for all households in Canada is $2.19 \%$. To estimate the CV for the average household expenditure on rented living quarters in Toronto, use the following equation. Note that this method provides only an approximation of the CV.

## CV for expenditures on rented living quarters by households in Toronto:

CV (for all hhlds) x SQRT \# of hhlds reporting in Canada \# of hhlds reporting in Toronto

```
= 2.19% x SQRT(5,326 / 293)
= 2.19% x 4.26
= 9.34%
```

where \# of hhlds reporting in Canada

```
= # of hhlds in Canada x percentage reporting
    100
= 14,920 < 35.7
    100
= 5,326
```

and where \# of hhlds reporting in Toronto

```
= # of hhlds in Toronto x percentage reporting (Toronto)
    1 0 0
= 710\times41.3
    100
= 293
```

## Non-Sampling Error

Non-sampling errors occur because certain factors make it difficult to obtain accurate responses or responses that retain their accuracy throughout processing. Unlike sampling error, non-sampling error is not readily quantified. Four sources of non-sampling error can be identified: coverage error, response error, nonresponse error, and processing error.

## Coverage Error

Coverage error results from inadequate representation of the intended population. This error may occur during sample design or selection, or during data collection and processing. There is no evidence of significant coverage error in the 1998 Survey on Household Spending.

## Response Error

Response error may be due to many factors, including faulty design of the questionnaire, interviewers' or respondents' misinterpretation of questions, or respondents' faulty reporting. In the Survey of Household Spending, the difference between receipts and disbursements is calculated as a check on respondents' recall. This important quality control tool involves the balancing of receipts (income and other money received by the household) and disbursements (total expenditure plus the variable money flows - assets, loans, and other debts) for each questionnaire. If the difference was greater than $10 \%$ of the larger of receipts or disbursements, respondents were contacted again for additional information. This ensures that expenditures, at least at the aggregate level, are commensurate with household income and other sources of funds.

The variable "Average difference between receipts and disbursements" indicates the average amount by which
the survey has failed to collect a balanced questionnaire from every household. The table below presents this variable by province.

Several features of the survey help respondents recall their expenditures as accurately as possible. First, the survey period is the calendar year because it is probably more clearly defined in people's minds than any other period of similar length. Secondly, expenditure on food (about 11\% of the average budget in 1998) can be estimated as either weekly or monthly expenses depending on the respondent's purchasing habits. Thirdly, expenses on smaller items purchased at regular intervals are usually estimated on the basis of amount and frequency of purchase. Purchases of large items (automobiles, for example) are recalled fairly rapidly, as are expenditures on rent, property taxes, and monthly payments on mortgages. However, even with these items, the accuracy of data depends on the respondent's ability to remember and willingness to consult records.

## Average Difference between Receipts and Disbursements by Province/Territory, 1998 <br> Province/Territory Average Difference

| Canada | $\mathbf{- 2 0 6}$ |
| :--- | ---: |
| Newfoundland | -217 |
| Prince Edward Island | $-\mathbf{3 3 2}$ |
| Nova Scotia | -239 |
| New Brunswick | -87 |
| Quebec | -135 |
| Ontario | -63 |
| Manitoba | -317 |
| Saskatchewan | -508 |
| Alberta | -473 |
| British Columbia | -461 |
| Yukon | -549 |
| Northwest Territories | 360 |
| Nunavut | -139 |

## Non-Response Error

Non-response error occurs in sample surveys because not all potential respondents cooperate fully. The extent of non-response varies from partial non-response to total non-response.

Total non-response occurs when the interviewer was either unable to contact the respondent, no member of the household was able to provide information, or the respondent refused to participate in the survey. Total non-response is handled by adjusting basic survey weight for responding households to compensate for nonresponding households. For the 1998 Survey of Household Spending, the overall response rate was $76.4 \%$. See Table 3 for provincial-territorial response rates.

In most cases, partial non-response occurred when the respondent did not understand or misinterpreted a question, refused to answer a question, or could not recall the requested information. Imputing missing values compensates for this partial non-response.

The importance of the non-response error is unknown but in general this error is significant when a group of people with particular characteristics in common refuse to cooperate and where those characteristics are important determinants of survey results.

## Processing Error

Processing errors may occur in any of the data processing stages, for example, during data entry, editing, weighting, and tabulation. See Data Processing and Quality Control (above) for a description of the steps taken to reduce processing error.

## The Effect of Large Values

For any sample, estimates can be affected by the presence or absence of extreme values from the population. These extreme values are more likely to arise from positively skewed populations. The nature of the subject matter of the SHS lends itself to such extreme values. Estimates of totals, averages and standard errors may be greatly influenced by the presence or absence of these extremes.

## Comparability Over Time

Conducted only since 1997, the Survey of Household Spending integrates most of the content found in the Family Expenditure Survey and the Household Facilities and Equipment Survey. Many data from these two surveys are comparable to the Survey of Household Spending data. However, some differences related to the methodology, to data quality and to definitions must be considered before comparing these data. To obtain a detailed description of the differences between the Family Expenditure Survey and the Survey of Household Spending, consult the publication Spending Patterns in Canada, 1997, catalogue No. 62-202XPB/XIB. For the differences related to the Household Facilities and Equipment Survey, contact Client Services at 1-888-297-7355 to obtain a copy of 1997 Survey of Household Spending Users' Guide (Dwelling characteristics and household facilities).

## NOTES AND DEFINITIONS

## General Concepts

1. The 1998 Survey of Household Spending has two reference periods. Expenditure data are collected for the calendar year 1998. Dwelling characteristics and data about household equipment are collected as of December $31^{\text {st }}, 1998$.
2. Expenditure data are tabulated for full-year households only. Dwelling characteristics and household equipment data are tabulated for full-year and part-year households. See the definition of "Household" below.
3. Reimbursed expenditures are excluded from the tabulations (e.g., work-related expenses or expenditures covered by insurance).
4. Expenses attributable to a business are excluded from the tabulations.
5. With some minor exceptions, the survey includes spending on all goods and services received in 1998 whether paid for before or after 1998 (such as on an instalment plan).
6. All expenditures include the Goods and Services Tax, provincial retail sales taxes, tips, customs duties and any other additional charges or taxes.
7. All expenditures include gifts given to persons outside the household. Only gifts of clothing are reported separately, although they are included in the summary category clothing. See also "Gifts of money and contributions"below.
8. Where an insurance settlement was used to repair or replace property, the survey includes only the deductible amount paid for an item.
9. Where a trade-in is used to lower the price of an item, most commonly a vehicle, the expenditure amount is the total cost after the trade-in. Real estate transactions are excepted.

## Expenditure Terms

Expenditure data is collected for the entire reference year. Most of these terms are comparable to those from the Family Expenditure Survey, last conducted in 1996. Exceptions are noted.

Average household expenditure: The average household expenditure is equal to the estimated total expenditures of all households divided by the estimated number of households. The average is based on all households in a column, including households that reported a zero value. To calculate the average expenditure per household reporting a purchase, see "How to Use the Expenditure Data Tables".

Food purchased from stores: Stores include frozen food provisioners, outdoor farmers' markets and stands, and all other non-service establishments.

Food purchased from restaurants: Restaurants include refreshment stands, snack bars, vending machines, mobile canteens, caterers and coffee wagons.

Gifts of money and contributions: This includes money and support payments, given to persons outside the household or to charity. This does not include money spent on gifts to persons outside the household as used to be the case in the Family Expenditure Survey.

Household appliances: Net purchase price after deducting trade-in allowance and any discount. Excludes appliances included in the purchase of a home and built-in appliances. Expenditures on household fixtures (e.g., built-in appliances and wall-to-wall carpeting) can be reported under the appropriate expenditure item
or, if they were part of a larger job, under "Additions, renovations etc. to a home", or "Maintenance, repairs and replacements".

Item numbers: The statistical tables to which this guide refers include three and four-digit codes for each category of expenditure or characteristic as shown. Where two or more basic classes have been aggregated, the content of these aggregates is defined by the code range shown. Note that these numbers are not necessarily the same from year to year.

Maintenance, repairs and replacements (owned living quarters): Expenditures on the total of contracts, labour, and materials for all types of maintenance, repairs and replacements. Includes all expenditures on the dwelling such as those for built-in appliances and other equipment and fixtures. Costs of additions, renovations and new installations are considered increases in assets and are included in "Money flows - assets, loans and other debts".

An annual data series showing household expenditures on repairs and renovations is available from the Homeowner Repair and Renovation Survey. See Homeowner Repair and Renovation Expenditures in Canada, catalogue No. 62-201.

Miscellaneous: includes expenses on other property (not principal accommodation or vacation home), legal services, financial services, dues to unions and professional associations, contributions and dues for social clubs, forfeits of deposits, fines, money lost, and purchase of tools and equipment for work.

Prior to 1997, in the Family Expenditure Survey, interest on personal loans and interest paid on mortgages and loans for other property were reported under "miscellaneous". (Principal payments for all mortgages and loans were reported under "money flows - assets, loans and other debts" ${ }^{2}$ since they are considered to pertain to a change in the value of household assets or debts.)

As of the 1997 reference year, interest payments were not available separately from principal. Starting in 1997, payments for personal loans and mortgages and loans pertaining to other property (including both principal and interest) are reported under "money flows - assets, loans and other debts".

Also starting in 1997, expenditures for "games of chance", formerly included under "miscellaneous" formed a separate sub-category.

Caution should therefore be used when comparing current data to data from 1996 or earlier. The categories "total current consumption" and "total expenditure" are also affected since "miscellaneous" is a component of these categories.

Package travel tours: Package trips that included at least two components of a travel tour such as transportation and accommodation, or accommodation with food and beverages.

Personal insurance payments and pension contributions: Payments for life insurance, annuities, employment insurance, public and private pension plans, and similar items. For certain uses of the data, some of these items might be regarded as savings, although the relationship between the expenditure and any increase in savings may not be easily determined. This category of expenditure was called "Security" prior to the 1996 survey. (Registered retirement savings plan (RRSP) contributions are included in "Money flows - assets, loans and other debts".)

Percentage reporting: The percentage of households that reported purchasing an item. These percentages cannot be added together to form sub-totals.

Percentage of total expenditure: The percentage of total expenditure spent on an item.

[^1]Personal taxes: Personal taxes are income taxes paid in 1998 on 1998 and previous years' incomes plus other personal taxes (gift taxes, Newfoundland school tax, etc.) minus income tax refunds received in 1998, except for federal Child Tax Benefits, Goods and Services Tax credits and provincial tax credits. These tax credits are included in "average household income before taxes".

Property taxes: This is the amount billed, excluding any rebates. Special service charges (i.e., garbage, sewage, etc.), local improvements, and water charges are included if these are part of the property tax bill. Property taxes that are included in condominium charges are excluded.

Purchase of automobiles and trucks: Net purchase price, including extra equipment, accessories, and warranties bought when the vehicle was purchased, after deducting any trade-in allowance or separate sales. (Separate sales occur when a vehicle is sold independently by the owner, e.g., not traded-in when purchasing or leasing another vehicle.)

Rent: The net household expense for rent after adjusting for rebates and for any use of the dwelling for business. No adjustment for partial subletting to non-household members is made. Receipts from this activity are considered part of household income.

Selected money flows: See "Money flows-assets, loans and other debts" under "Household Characteristics".
Shelter: Expenditures on principal accommodation (either owned or rented) and on other accommodation such as vacation homes or accommodation while travelling.

Prior to 1997, in the Family Expenditure Survey, mortgage interest payments were reported in the Shelter category under both "owned living quarters" and "owned vacation homes". (Mortgage principal payments were reported under "money flows - assets, loans and other debts" ${ }^{3}$ since they are considered to pertain to a change in the value of household assets.)

Beginning with the 1997 reference year, interest payments were not available separately from principal. For this reason, "Shelter" has been redefined to include "regular mortgage payments" on "owned living quarters" (including both principal and interest). The entire mortgage payment for owned vacation homes is included under "money flows - assets, loans and other debts". Caution should therefore be used when comparing data to data from 1996 and earlier. The categories "total current consumption" and "total expenditure" are also affected since shelter is a component of these categories.

Tenants' and homeowners' insurance: Premiums paid in 1998 for fire and comprehensive policies. Premiums covering more than the survey year were not prorated.

Total current consumption: Expenses incurred during the survey year for food, shelter, household operations, household furnishings and equipment, clothing, transportation, health care, personal care, recreation, reading materials, education, tobacco products and alcoholic beverages, games of chance, and a miscellaneous group of items.

Caution should be used when comparing total current consumption to total current consumption from 1996 and earlier. See "Shelter" and "Miscellaneous" for more information. Prior to 1997, expenditures for gifts were not included in total current consumption. Starting in 1997, these expenditures are reported in the appropriate category and, therefore, contribute to total current consumption.

Total expenditure: The expenditures included in "total current consumption" plus personal taxes, personal insurance payments and pension contributions, and gifts of money and contributions to persons outside the household.

3 Formerly "Net change in assets and liabilities".

Caution should be used when comparing total expenditure to total expenditure from 1996 and earlier. See "Shelter" and "Miscellaneous" for more information.

Traveller accommodation: Traveller accommodation excludes accommodation that was part of a travel tour (which is included in "Package travel tours").

## Dwelling Characteristics

Dwelling characteristics are collected as of December $31^{\text {st }}$.
Type of dwelling: This variable describes the type of dwelling in which the household resided on December $31^{\text {st }}$. A dwelling is a structurally separate set of living premises with a private entrance from outside the building or from a common hall or stairway.

A single detached dwelling contains only one dwelling unit and is completely separated by open space on all sides from any other structure, except its own garage or shed.

A single attached dwelling is a double or semi-detached unit (side-by-side) or a row or terrace unit.
The classification apartment includes duplexes (two dwellings, situated one above the other), triplexes, fourplexes or apartment buildings.

Other dwellings include mobile homes, motor homes, tents, railroad cars or houseboats which are used as permanent residences and are capable of being moved on short notice.

Repairs needed: This variable indicates the respondent's perception of the repairs the dwelling needed on December $31^{\text {st }}$ to restore it to its original condition. Remodeling, additions, conversions, or energy improvements which would upgrade the dwelling over and above its original condition are not included.

Major repairs include serious deficiencies in the structural condition of the dwelling, as well as the plumbing, electrical and heating systems. Examples include corroded pipes, damaged electrical wiring, sagging floors, bulging walls, damp walls and ceilings, crumbling foundation, etc.

Minor repairs include deficiencies in the surface or covering materials of the dwelling and less serious deficiencies in the plumbing, electrical and heating systems. Examples include small cracks in interior walls and ceilings, broken light fixtures and switches, cracked or broken panes, leaking sinks, missing shingles or siding, peeling paint, etc.

Regular maintenance includes painting, fixing leaking faucets, clogged gutters or eavestroughs, etc.
Tenure: This variable gives the housing status of the household on December $31^{\text {st }}$. Note that the classification variable for housing tenure refers to the entire reference year. See "Housing tenure" under "Classification Categories".

Owned with mortgage indicates that the dwelling is owned by a household member and that there is a mortgage as of December $31^{\text {st }}$.

Owned without mortgage indicates that the dwelling is owned by a household member and that there is no mortgage as of December $31^{\text {st }}$.

Rented indicates that the dwelling is rented by the household for the entire reference year or occupied rentfree.

Year of move: This item refers to the year the household moved into the dwelling. If the dwelling was occupied by previous generations, the first year of residence for the household member who has occupied
the dwelling the longest is recorded.
Period of construction (for dwelling occupied on December $31^{\text {st }}$ ): This variable gives the year or period in which the original building was constructed.

Number of rooms in dwelling (for dwelling occupied on December $31^{\text {st }}$ ): This variable includes the kitchen, bedrooms, and finished rooms in the attic or basement. It excludes bathrooms, halls, vestibules and rooms used solely for business purposes.

Number of bedrooms in dwelling (for dwelling occupied on December $31^{\text {st }}$ ): This variable includes all rooms designated as bedrooms even though the use may be occasional, as in the case of "spare" bedrooms.
Exclude rooms designated as dining rooms, living rooms, etc., which may be used as bedrooms at night.
Bedrooms that were built in the basement of a dwelling are included.
Bathrooms (for dwelling occupied on December $31^{\text {st }}$ ): This variable indicates the number of rooms in the dwelling with an installed bathtub and/or shower.

Principal heating equipment (for dwelling occupied on December $31^{\text {st }}$ ): This variable indicates the type of heating equipment, which is chiefly used to heat the dwelling in winter.

Steam or hot water furnaces distribute central heating through radiators located throughout the house and connected by pressure pipes.

Forced hot air furnaces distribute central heating by a motor-driven fan through vents located throughout the dwelling. (This is the most common central heating system.) Furnaces with a pump are included in this category.

Other hot air furnaces distribute central heating by convection (natural) flow of hot air through vents located throughout the house. Gravity furnaces are included in this category.

Heating stoves are localized heating units with no central distribution system to other parts of the house (e.g., oil space heater, gas space heater, wood stoves).

Electric heating includes permanently installed baseboard electric heating and other types such as floor or ceiling heating wires in all or most rooms.

Other heating includes cookstoves and any other type of heating equipment not listed above.
Age of principal heating equipment installed (for dwelling occupied on December $31^{\text {st }}$ ): This variable indicates how long ago the principal heating equipment was installed.

Principal heating fuel (for dwelling occupied on December $31^{\text {st }}$ ): The principal winter fuel used in the principal heating equipment is given here (e.g., oil or other liquid fuel, piped or bottled gas, electricity, wood or other fuels).

Principal heating fuel for hot water (for dwelling occupied on December $31^{\text {st }}$ ): This variable indicates the type of fuel used for the running hot water supply (e.g., oil or other liquid fuel, piped gas, electricity or other fuels such as bottled gas or wood).

Principal cooking fuel (for dwelling occupied on December $31^{\text {st }}$ ): This variable indicates the main fuel for the range or stove on which the household does most of the cooking (e.g., piped gas, electricity or other cooking fuels). "Other" includes oil or other liquid fuel, bottled gas and wood.

## Household Equipment

In general, appliances and equipment are included if they are in working order or will soon be repaired, and are located within the dwelling occupied on December $31^{\text {st }}$. They must be owned or leased for the exclusive use of the household.

Washing machine: An automatic washing machine is fully automatic with wash and rinse cycles. Washing machines located outside the dwelling and shared with other households are excluded. "Other" washing machines include electric wringer washers.

Clothes dryer: Clothes dryers located outside the dwelling and shared with other households are not included. Dryers may be electric or gas.

Dishwasher: Dishwashers may be built-in or portable.
Freezer: A freezer is an individual piece of equipment and not part of a refrigeration unit such as the freezer in a refrigerator.

Air conditioner: A central air conditioner is designed to cool the air in the entire building and may be located either inside or outside this dwelling unit, for example, in the basement of an apartment block. A window-type air conditioner is installed in a window or through a wall to cool the air in a room.

Telephone (includes business use): Telephones used for business are included if the business is conducted in the dwelling. Cordless phones are included. Cellular telephones are excluded.

Cellular telephone: Cordless phones are excluded.
Compact disc player: A compact disc player may be a separate unit, part of a component or built in (as in a receiver/cassette recorder/compact disc combination unit).

Video cassette recorder: Video cassette recorders (VCRs) are units which play videocassettes when attached to a television or monitor.

Home computer: Computers used exclusively for business purposes are not included.
Modem: A modem is a communication device for microcomputers that translates a computer's digital signal into an analogue signal (and vice versa) for transmission over telephone lines or cables. A modem may be located inside a microcomputer's system cabinet. It may also be a separate unit (external).

Internet use from home: This variable indicates whether or not the household accesses the internet via a computer in the house. It includes cases where a home computer is used to link to a business computer located outside the dwelling for access to the Internet. Excluded are cases where the Internet is accessed directly through a computer located outside the dwelling (e.g., work).

Owned vehicles: This variable gives the number of vehicles (car, van/mini-van, truck/sport utility vehicle) owned by members of the household on December $31^{\text {st }}$ completely or partially for private use, excluding those leased.

Owned automobiles: This variable gives the number of automobiles owned by members of the household on December $31^{\text {st }}$ completely or partially for private use, excluding those leased.
Owned vans or trucks: This variable gives the number of vans, minivans, trucks and sport utility vehicle owned by members of the household on December $31^{\text {st }}$ completely or partially for private use, excluding those leased.

## Household Characteristics

Household characteristics help to describe the expenditure data. Other characteristics are collected and
tabulated and are available as a custom request. Contact the Dissemination Unit at 1-888-297-7355 or 613-951-7355 for more information or contact your closest regional office ${ }^{4}$.

Average age of reference person: This variable acts as a general age indicator for the household and uses the reference person's age in years as of December $31^{\text {st }}$. Prior to 1996, in the Family Expenditure Survey, the age of the husband was used for married-couple households and the age of the reference person for all other households.

Average household income before tax: This variable includes total household income received in calendar year 1998, including gross income from wages and salaries, net income from self-employment, receipts from military pay and allowances, gross receipts from roomers and boarders not related to the reference person, net rentals, interest and dividends, all pensions, workers' compensation and employment insurance benefits, social assistance and income supplements, child tax benefits, Goods and Services Tax credits, provincial tax credits, and miscellaneous regular income receipts.

Average household size: The average number of people in a household. In this context, household size is defined as the number of year-equivalent persons. The number of year-equivalent persons is calculated by dividing the number of weeks that members were part of the household by fifty-two. In this way, part-year members are counted as fractions of a year-equivalent person.

Average net change in assets and liabilities: See "Money flows - assets, loans and other debts" under "Expenditure Terms".

Money flows - assets, loans and other debts: Net changes during the survey year (calendar year 1998) in bank balances; money on hand; money owed to the household; money owed by the household; purchase and sale of stocks and bonds, personal property, and real estate; expenditures on home additions, renovations and new installations; and contributions to and withdrawals from registered retirement savings plans.

A similar variable was called "Difference between assets and liabilities" in the Family Expenditure Survey last conducted in 1996. Starting with the 1997 SHS, principal payments on mortgages on owned homes are excluded, and interest payments on mortgages for vacation homes and other property and on personal loans are included. See also the expenditure terms in "Shelter" and "Miscellaneous" above.

Dwelling: The survey covers only private dwellings. The definition of a dwelling is as defined for the 1996 Census: "a separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or stairway inside the building. The entrance to the dwelling must be one that can be used without passing through the living quarters of someone else."

Estimated number of households: The estimated number of private households on December $31^{\text {st }}$, of the reference year. For expenditure data tables, the estimate is based on households only. For tables presenting dwelling characteristics and household equipment, both full-year and part-year households are included in the estimate. See "Household" below.

Household: A person or group of persons occupying one dwelling unit is defined as a "household". The number of households, therefore, equals the number of occupied dwellings. A full-year household has at least one full-year member; a part-year household is composed entirely of part-year members.

Household member: A full-year member was a member of the household for the entire year. A part-year member was a member of the household for less than fifty-two weeks. Expenditure and income information for part-year members is collected for the portion of the year during which they were members of the household.

[^2]Number of households in sample: This refers to the number of households used for data estimation, which includes the number of households sampled, minus vacant dwellings, ineligible households, households that were unable to be contacted, households that refused to be interviewed, and households whose questionnaires did not pass editing procedures. For expenditure data tables, only full-year households are included. For tables presenting dwelling characteristics and household equipment, both full-year and part-year households are included. See "Household" above.

Other money receipts: Other receipts not included in income such as cash gifts or inheritances and life insurance settlements.

Percentage homeowners (December 31 ${ }^{\text {st }}$, 1998): Percentage of households living in a dwelling owned (with or without a mortgage) by a member of the household at December $31^{\text {st }}$ of the reference year.

Reference person: The household member being interviewed chooses which household member should be listed as the reference person after hearing the following definition. "The household reference person is the member of the household mainly responsible for its financial maintenance (i.e., pays the rent, mortgage, property taxes, electricity, etc.). This person can be either male or female. When all members of the household share equally, any member may be shown as the reference person." This person must have been a member of the household on December $31^{\text {st }}$ of the reference year.

## Classification Categories

## Income

Income quintiles are used as classifiers in the data tables. In addition, "average household income before tax" is a descriptive household characteristic found at the beginning of each expenditure table (see definition above). Readers requiring official income statistics are directed to the publication Income Distributions by Size in Canada, catalogue number 13-207. ${ }^{5}$

Household income quintiles: Income groupings obtained by ranking households in ascending order of total household income and partitioning the households into five groups such that the estimated number of households in each group is the same. Custom tabulations of other income quantiles and various income groups are available subject to data quality restrictions. Contact the Dissemination Unit at 1-888-297-7355.

## Housing Tenure

Refers to whether a household member owned or rented the dwelling(s) in which the household lived during the reference year.

Owners: Homeowners are people who lived for the full survey year in a dwelling owned (with or without mortgage) by a household member. See also "Percentage Homeowners (December $31^{\text {st }}$ )" in "Household Characteristics", and "Tenure" under "Dwelling Characteristics".

Owned with mortgage: Owned dwelling for the full survey year and with a mortgage on December $31^{\text {st }}$, 1998.

Renters: Renters are those who rented a dwelling for the full survey year (as a regular tenant, rent free, or with reduced rent).

Mixed tenure: Includes those households that both owned and rented during the reference year (calendar year 1998).

## Household Type

Households are divided into the following types:
Husband-wife households: Households where the married or common-law spouse of the reference person was a member of the household on December $31^{\text {st }}, 1998$. This household type may be further broken down into husband-wife households without children (without additional persons), with children (without additional persons), and with additional persons. "Children" are never-married sons, daughters, or foster children of the reference person and may be any age. "Additional persons" include sons, daughters and foster children whose marital status is other than "single, never married", other relatives by birth or marriage, and unrelated persons.

Lone-parent households: Households where no spouse of the reference person is present and there is at least one child (never-married son, daughter, or foster child of the reference person). The lone-parent households for which data are presented in this publication do not include any additional persons.

Other households: May be broken down into households composed of relatives only and households having at least one unrelated person. Relatives may include:

[^3]- Sons, daughters and foster children of the reference person whose marital status is other than "single, never married",
- relatives of the reference person by birth or marriage (not spouse, son, daughter, or foster child),
- spouse of the reference person who was not present in the household on December $31^{\text {st }}, 1998$.

Other households having at least one unrelated person have at least one household member who is unrelated to the reference person (e.g., lodger, roommate, employee).

## Geography

Metropolitan Areas: The overall concept for delineating metropolitan areas is one of a large urban area together with adjacent urban and rural areas that have a high degree of social and economic integration with this urban area. (See the 1996 Census Dictionary, p. 181, Catalogue no. 92-351-XPE.)

For the Survey of Household Spending, data are tabulated based on the 1996 census metropolitan area (CMA) boundaries. In the Survey of Household Spending, only data for the Ottawa, Ontario part of the OttawaHull CMA, are tabulated for the metropolitan area. The data for Hull, Quebec part, are included in the data tabulated for the province of Quebec and Canada (10 provinces). Also, the municipality of Selkirk is included in the Survey of Household Spending metropolitan area of Winnipeg, whereas it is not included in the CMA of Winnipeg.

The metropolitan areas for which the data are tabulated are: St. John's, Charlottetown - Summerside, Halifax, Saint John, Québec, Montréal, Ottawa, Toronto, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria, Whitehorse, and Yellowknife.

Province/Territory: Refers to the major political divisions of Canada. The Survey of Household Spending also covers the Yukon, Northwest Territories and Nunavut.

Rural area: All territory outside urban areas is considered rural. Taken together, urban and rural areas cover all of Canada.

Size of area of residence: Sampled dwellings are assigned to the following groups depending on the 1996 population size (according to the 1996 census boundaries) of the metropolitan area, municipality, or urban area in which they are located.

Households are assigned as follows:

```
Urban areas:
    1,000,000 and over
    500,000-999,999
    250,000-499,999
    100,000-249,999
    30,000-99,999
    under 30,000
Rural area
```

Urban area: For the Survey of Household Spending (based on the LFS sampling frame), urban areas include:

- all larger metropolitan areas (even though they do contain some rural areas);
- most smaller metropolitan areas (also called census agglomerations). In some cases, where a census agglomeration contains a large rural population, only the urban portion is considered urban;
- urban areas based on the census definition: Urban areas have minimum population concentrations of 1,000 and a population density of at least 400 per square kilometre, based on the previous census population counts.

## How to Use Expenditure Data Tables

This section explains the calculations used most frequently to manipulate expenditure data from the Survey of Household Spending. Users are strongly advised to refer to this section before doing their own data analysis.

Expenditure data given in the tables are estimates based on the total sample, that is, on households that reported buying an item and those that did not. Data on percentage reporting are provided in the tables so that users can derive estimates of both the number of households reporting a purchase and the average expenditure of households that reported buying an item.

## Please refer to example table at the end of this section.

## 1. How to calculate the number of households reporting a purchase

To estimate the number of households reporting a purchase, multiply the estimated number of households at the top of the column by the percentage of households reporting and then divide by 100 .

For example, to find the number of households in the lowest income group that had pet expenditures:

```
\# of households* x Percentage reporting for pet expenditures
100
```

Example: $\frac{463,590 \times 29.4}{100}=136,295$

* estimated number

## 2. How to calculate the average expenditure per household reporting a purchase

To calculate the average expenditure per household reporting the purchase of an item, divide the average household expenditure on that item by the corresponding percentage reporting and then multiply by 100.

For example, to find the average expenditure on pets by households that actually had pet expenses:
Average household expenditure on pet expense X 100
Percentage reporting
Example: $\$ 239 \times 100=\$ 502$
47.6

## 3. How to calculate average expenditure per person

To calculate the average expenditure per person on an item, divide the average expenditure per household for that item by the household size found near the top of the column.

For example, to find the average expenditure per person for food by those households in the lowest income group:

## Average expenditure per household for food

Household size
Example: $\frac{\$ 2,474}{1.29}=\$ 1,918$

When comparing estimates of per person expenditure, note that family composition (number of children and adults) is also a factor in many expenditure patterns.

## 4. How to calculate percentage of total average expenditure per household (budget share)

To calculate the percentage of total average household expenditure represented by an item (budget share), divide the average expenditure per household for an item by total expenditure for all items and multiply by 100.

For example, to find the percentage of total expenditures represented by food purchases for households in the lowest income group:
$\frac{\text { Average expenditure per household for food } \times 100}{\text { Total average expenditure per household }}$
Total average expenditure per household
Example: $\quad \$ 2.474 \times 100=20.1 \%$ $\$ 12,311$

## 5. How to combine expenditure items into your own groupings

The average expenditure per household for different items in a column can be added together to make new subtotals. (But do not add the "percentage reporting" values for different items.)

For example, to find the average expenditure per household in the lowest income group on food, shelter and clothing:

Average expenditure on food + clothing + shelter (lowest income group)
Example: $\$ 2,474+\$ 427+\$ 4,426=\$ 7,327$

## 6. How to combine columns of data

Columns are combined by using the estimated number of households at the top of each column to calculate the weighted average of the values in the columns. To calculate the average expenditure across several columns, multiply the estimated number of households by the average expenditure for an item for each of the columns being combined. Sum the results. Then divide this total by the sum of the estimated number of households.

For example, to find the average expenditure on food for households in the lowest three income groups:
(\# of households* in lowest income group x average expenditure on food) +
(\# of households* in next income group x average expenditure on food) +
(\# of households* in next income group $x$ average expenditure on food)
\# of households* in lowest income group + \# of households* in next income group +
\# of households* in next income group

```
Example: \((463,590 \times \$ 2,474)+(882,370 \times \$ 2,881)+(797,740 \times \$ 3,518)=\$ 3,030\)
                                    \(463,590+882,370+797,740\)
* estimated number
```

## 7. How to calculate total expenditure on an item for all households or a sub-group of households

To calculate how much was spent on average on an item for all households or households in a particular subgroup (e.g., households in the lowest income group), multiply average expenditure per household for an item by the estimated number of households at the top of the column.

For example, to find how much was spent on food by all households in the lowest income group:
Average expenditure per lowest income household for food $x$ estimated number of households
Example: $\quad \$ 2,474 \times 463,590=\$ 1,146,921,660$
Note that this aggregate is based on a sample that excludes part-year households and other people ineligible for the survey.

## 8. How to calculate percentage of total expenditure for all households (market share)

Expenditure share, or market share, is the percentage of the total expenditure for an item that can be attributed to a particular sub-group of households, e.g., the percentage of all clothing expenditures made by households in the lowest income group.

It is calculated by dividing the total expenditure on an item for a given sub-group of households (to calculate, see above) by the total expenditure on the item for all households and then multiplying by 100.

For example, to find the percentage of all expenditures on food made by households in the lowest income group:

> Average expenditure per lowest income households on food x \# of households in lowest income group $\begin{aligned} & \text { Average expenditure for all households on food } \mathrm{x} \\ & \text { \# of households }{ }^{*} \text { for all classes } \\ & \text { Example: } \frac{\$ 2,474 \times 463,590}{\$ 5,960 \times 10,900,500} \times 100=1.77 \%\end{aligned}$

* estimated number

## Example Data - Summary Average Household Expenditure by Household Income Group

|  | All Classes |  | Under \$10,000 |  | \$10,000-\$14,999 |  | \$15,000-\$19,999 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Estimated number of households | 10,900,500 |  | 463,590 |  | 882,370 |  | 797,740 |  |
| Average household size | 2.61 |  | 1.29 |  | 1.52 |  | 1.94 |  |
|  | Average household expenditure | Percentage reporting | Average household expenditure | Percentage reporting | Average household expenditure | Percentage Reporting | Average household expenditure | Percentage reporting |
| Food | 5,960 | 100.0 | 2,474 | 100.0 | 2,881 | 100.0 | 3,518 | 100.0 |
| Shelter | 8,477 | 99.9 | 4,426 | 99.3 | 5,051 | 99.5 | 5,833 | 99.9 |
| Pet Expenses | 239 | 47.6 | 67 | 29.4 | 70 | 27.2 | 122 | 38.2 |
| Clothing | 2,115 | 99.0 | 427 | 92.0 | 615 | 96.1 | 840 | 98.2 |
| Total Expenditure | 49,068 | 100.0 | 12,311 | 100.0 | 15,036 | 100.0 | 20,143 | 100.0 |

## APPENDICES

Table 1 Coefficients of Variation for Average Household Expenditures, Canada, Provinces and Territories, 1998

|  | Canada | Nfld | PEI | NS | NB | Qc | Ont |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Estimated number of households | 1.82 | 1.31 | 0.58 | 0.82 | 0.67 | 0.70 | 3.18 |
| Household size | 0.15 | 0.35 | 0.40 | 0.48 | 0.29 | 0.29 | 0.30 |
| Number of children aged less than 5 | 1.57 | 4.67 | 6.02 | 5.79 | 4.41 | 3.66 | 2.89 |
| Number of children aged 5 to 14 years | 1.10 | 3.04 | 4.83 | 3.37 | 2.85 | 2.61 | 2.04 |
| Number of youths aged 15 to 19 years | 2.16 | 4.50 | 8.24 | 6.52 | 5.31 | 4.41 | 4.41 |
| Number of youths aged 20 to 24 years | 1.81 | 5.08 | 8.09 | 6.92 | 5.86 | 3.73 | 3.56 |
| Number of adults aged 25 to 64 years | 0.15 | 0.38 | 0.48 | 0.49 | 0.36 | 0.25 | 0.31 |
| Number of seniors aged 65 years and over | 0.31 | 0.70 | 0.96 | 0.79 | 0.59 | 0.52 | 0.67 |
| Number of part-time earners | 1.00 | 2.75 | 2.79 | 2.92 | 2.46 | 2.09 | 2.09 |
| Number of full-time earners | 0.71 | 3.03 | 3.02 | 2.38 | 2.10 | 1.51 | 1.28 |
| Age of reference person | 0.22 | 0.53 | 0.73 | 0.60 | 0.56 | 0.44 | 0.44 |
| Household income before tax | 0.65 | 1.50 | 1.43 | 1.28 | 1.09 | 1.20 | 1.31 |
| Other money receipts | 11.02 | 21.99 | 21.54 | 23.90 | 27.55 | 17.42 | 18.46 |
| Money flows - assets, loans and other debts | 8.47 | 19.77 | 26.64 | 22.87 | 13.94 | 15.41 | 13.88 |
| Percentage |  |  |  |  |  |  |  |
| Homeowner on December 31 | 0.86 | 1.86 | 3.40 | 2.05 | 2.18 | 1.71 | 1.86 |
| Automobile or truck owners on December 31 | 0.57 | 1.74 | 1.71 | 1.78 | 1.43 | 1.22 | 1.23 |
| One-person households | 0.68 | 2.79 | 1.66 | 2.65 | 1.71 | 1.24 | 1.44 |
| Husband-wife households | 0.43 | 1.04 | 1.55 | 1.30 | 0.97 | 0.84 | 0.87 |
| Lone-parent households | 0.91 | 2.36 | 1.50 | 3.72 | 2.18 | 1.53 | 1.92 |
| With no full-time earner | 0.96 | 2.03 | 2.91 | 2.20 | 2.04 | 1.81 | 2.11 |
| With one full-time earner | 1.53 | 4.96 | 6.30 | 4.18 | 3.49 | 3.25 | 3.09 |
| With two or more full-time earners | 1.89 | 6.75 | 8.82 | 6.40 | 5.08 | 4.02 | 3.45 |
| With wife employed full time | 1.87 | 5.80 | 8.21 | 6.12 | 4.47 | 4.07 | 3.54 |
| With husband employed full time | 1.07 | 4.25 | 5.84 | 3.30 | 2.80 | 2.26 | 2.03 |
| With age of reference person: |  |  |  |  |  |  |  |
| Under 25 years | 7.26 | 23.62 | 29.38 | 20.39 | 22.39 | 16.75 | 16.97 |
| 25 to 44 years | 1.11 | 2.83 | 4.51 | 2.75 | 2.85 | 2.04 | 2.42 |
| 45 to 64 years | 1.26 | 2.89 | 4.34 | 3.10 | 3.03 | 2.20 | 2.69 |
| 65 years or older | 1.21 | 2.77 | 3.72 | 2.70 | 2.54 | 2.23 | 2.70 |
| Total expenditure | 0.57 | 1.48 | 1.78 | 1.34 | 1.23 | 0.98 | 1.11 |
| Total current consumption | 0.56 | 1.39 | 1.60 | 1.37 | 1.23 | 1.03 | 1.05 |
| Food | 0.54 | 1.31 | 1.65 | 1.25 | 1.67 | 1.02 | 1.11 |
| Food purchased from stores | 0.48 | 1.14 | 1.54 | 1.19 | 1.18 | 0.88 | 0.99 |

| Canada | $\mathbf{2 0 , 2 3 6}$ | $\mathbf{9 8 6}$ | $\mathbf{3 , 2 0 5}$ | 588 | $\mathbf{1 5 , 4 5 7}$ | $\mathbf{7 6 . 4 \%}$ |
|  |  |  |  |  |  |  |

(1) Part-year households are included in the calculation of response rates. There were 537 part year households in 1998.
(2) Rejected at the editing stage.
(3) Usable/eligible*100

[^0]:    1 A detailed description of the Labour Force Survey sampling frame can be found in "Methodology of the Canadian Labour Force Survey", Statistics Canada, catalogue No. 71-526-XPB.

[^1]:    2 Formerly "Net change in assets and liabilities".

[^2]:    4 Halifax (902) 426-5331, Montreal (514) 283-5725, Ottawa (613) 951-8116, Toronto (416) 973-6586, Winnipeg (204) 983-4020, Regina (306) 780-5405, Edmonton (403) 495-3027, Calgary (403) 292-6717, Vancouver (604) 666-3691.

[^3]:    ${ }^{5}$ Traditionally, the Survey of Consumer Finances (SCF) has been the source of Statistics Canada's annual income estimates. In the near future, the Survey of Labour and Income Dynamics (SLID) will produce the annual cross-sectional income estimates, in addition to producing longitudinal income data.
