Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67) are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic prices as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank.

Foreword

About the figures

The series on international security transactions cover portfolio transactions in stocks, bonds and money market securities between non-residents and residents of Canada. The series include trade in outstanding issues, new issues, retirements, and change in interest payable and are further segmented by issuing sector and major geographic area. The principle guiding their construction is that a change of ownership occurs between residents of a foreign country and Canada. These series form an integral part of Canada's balance of payments. Certain types of security transactions, which are excluded from this publication, are classified to other balance of payments series as follows:

- security transactions representing direct investment capital by principal owners of an enterprise, e.g. parent companies subscribing to new stocks;
- foreign securities held as part of Canada's official international reserves or by Canadian banks for their own account;

Security transactions are recorded before charges for fees and commissions. The value used is the transaction price and the timing of a transaction's recording is generally the delivery or settlement date.

The quality of foreign portfolio investment data in Canadian stocks, bonds and money market paper is good. The flows are reported on a monthly survey sent to the major investment dealers, pension funds, and the largest debt issuing institutions such as the provinces and their enterprises. Historically, the response rate has been well over 90%. A considerable effort is made to identify the various sectors and institutions which issue securities to nonresidents; the data may, at times, be revised when new transactors are identified or information becomes available through annual surveys. The coverage is validated against administrative data and the annual census survey of foreign holdings of Canadian portfolio investments.

The quality of estimates of Canadian investment in foreign stocks, bonds, and money market paper is not as good as it is difficult to identify all Canadian residents making portfolio investments abroad. A considerable effort is made to identify the various Canadian institutions which invest in foreign securities and survey them on a monthly basis however individuals in the personal sector using foreign investment firms are harder to identify thereby weakening the estimates. The quality of the data has improved significantly with a series of annual surveys on Canadian portfolio investment abroad that began at year-end 1997. The inaugural survey was carried out as part of an international effort to improve data on external portfolio investment. Fully 35 countries participated in the portfolio survey, co-ordinated by the International Monetary Fund.

For transactions in outstanding securities, the data are largely derived from a monthly survey of investment dealers and of other financial institutions such as mutual funds, pension funds and trust companies which regularly buy or sell securities directly through dealers or brokers outside Canada. The data for new issues and retirements are obtained from survey and non-survey sources such as prospectuses, summaries prepared by dealers and other institutions, press reports, etc.

For a fuller description of the sources and methods employed in the construction of these series, please refer to the free publication Canada's Balance of International Payments and International Investment Position - Concepts, Sources, Methods and Products (Catalogue no. 67-506-X).

Analysis - February 2008

Canadians sharply increased their holdings of foreign securities by \$6.1 billion in February. This reflected a rebound in the demand for both foreign stocks and bonds. Meanwhile, non-residents acquired \$3.8 billion worth of Canadian securities over the month, their largest monthly purchase since April 2007. Canadian dollar-denominated outstanding bonds accounted again for the majority of the foreign investment.

Chart 1
Canadian portfolio investment in foreign securities¹

1. Reverse of balance of payments signs.

Canadian purchases of foreign bonds rebound

February marked a \$2.6 billion acquisition of foreign bonds, following two straight quarters of sell-offs in the context of the global credit market meltdown. Over the month, Canadian investors bought \$2.4 billion worth of US government bonds, fuelled by strong demand for medium-term bonds (5 to 10 years) as the yields on those instruments advanced.

Canadians also invested modestly in US corporate bonds (\$113 million). Purchases of non-US bonds remained minimal (\$72 million), mainly as a result of net sales of Canadian dollar-denominated non-US bonds.

Holdings of foreign money market instruments edge down

Related market information

In February, the Canadian short-term **interest rates** dropped 17 basis points to 3.24% while US short-term rates fell a steep 63 basis points to 2.12%. The resulting interest rate differential (1.12%) reached the highest level in four years, favouring investment in Canada.

Meanwhile, changes in long-term interest rates were less significant in both countries and were in opposite directions. Canadian rates were down 7 basis points to 3.81% and US rates increased the same to 3.85%.

Canadian **stock prices** rebounded 3.3% in February, with the Standard and Poor's / Toronto Stock Exchange Composite Index sitting at 13,582.7 at month end. Energy and mining sectors led the advance, fuelled by surging commodity prices.

In contrast, US stock prices fell for a fourth consecutive month, with the Standard and Poor's Composite Index dropping another 3.5%, closing February at 1,330.6, the lowest level since September 2006. While banking and financial sectors continued to slip, energy and mining sectors seemed immune from the overall market slump. Stock prices have plunged over 13% from a record high in May 2007.

The **Canadian dollar** edged up 0.47 US cents, trading just above parity (100.09 US cents) against the US dollar at February month end.

Definitions

The data series on international security transactions cover portfolio transactions in stocks, bonds and money market instruments for both Canadian and foreign issues.

Stocks include common and preferred equities, as well as warrants.

Debt securities include bonds and money market instruments.

Bonds have an original term to maturity of more than one year.

Money market instruments have an original term to maturity of one year or less.

Government of Canada paper includes treasury bills and US-dollar Canada bills.

After investment in foreign money market paper reached a six-year high of \$2.5 billion in January, Canadians divested to a small extent (\$284 million) in February, nearly all of it being non-US foreign paper. Meanwhile, domestic holdings of both US government Treasury bills and other US paper remained almost unchanged. In February, US short-term interest rates fell 63 basis points to 2.12%, the lowest level since December 2004.

Heavy investment in US stocks as prices fall to an 18-month low

Canadian investors resumed substantial purchases of foreign stocks in February, adding \$3.8 billion, more than replenishing January's reduction of \$2.3 billion. The majority of the outflows in February went to buy US shares (\$2.9 billion). In February, US stock prices fell for a fourth consecutive month to an 18-month low and the Canadian dollar remained at parity with its US counterpart, making US corporate shares relatively less costly to acquire.

Strong foreign demand for Canadian bonds persists

Following heavy purchases of \$6.3 billion in January, non-residents added a further \$3.7 billion worth of Canadian bonds to their portfolios in February, with the Canadian dollar-denominated outstanding issues again accounting for the majority of the investment. Regionally, British and Asian investors accounted for the demand, while US investors reduced their holdings by a sizeable amount.

On a sector basis, non-residents went on the sixth consecutive month of acquisitions of federal enterprise bonds (\$2.6 billion), almost all outstanding bonds. However, they trimmed their holdings of Canadian private corporations bonds (\$171 million), following a string of purchases that began in May 2007. In February, the average yields on corporate bonds fell to the lowest level since September 2005.

Meanwhile, non-residents increased their holdings of Government of Canada bonds by \$730 million, largely in outstanding issues. Investment activity was concentrated in federal bonds with longer term-to-maturity, as non-residents disposed of a sizeable amount of shorter term bonds (less than two years). Foreign investors also added \$650 million worth of provincial government bonds, reflecting the largest amount of new issues over the past nine months.

Foreign interest in Canadian money market continues to wane

Foreign investors continued to cut their holdings of Canadian money market instruments, down \$1.2 billion in February and \$2.1 billion in January. Foreign holdings of paper issued by the federal government and its enterprises both continued to decline in February, accounting for most of the decline during the month.

Non-residents reduced \$508 million worth of federal enterprise paper in February. Foreign investors have been selling federal enterprise paper for three consecutive months while buying federal enterprise bonds since September 2007, suggesting a shift in favour of longer-term debt instruments.

Foreign divestment in federal government short-term paper slowed to \$410 million, as reductions of Treasury bills were partially offset by investment in US-dollar Canada bills. In addition, non-residents disposed of \$301 million worth of paper issued by private corporations, the most in the past six months. In February, the average yields for finance company three-month paper fell for a third consecutive month to the lowest level in the past two years.

US investors continue to acquire Canadian shares

Non-residents bought \$1.3 billion of Canadian shares in February, as Canadian stock prices rebounded. The majority (\$1.2 billion) of this acquisition was in outstanding Canadian equities, with gold, mining and energy sectors attracting the largest foreign inflows.

February marked the third consecutive month of foreign investments in outstanding Canadian shares, despite a steep drop in Canadian stock prices in January. Since December 2007, investments by US investors accounted for nearly all the monthly purchases of outstanding Canadian shares, as the US stock markets posted consecutive losses.
