Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Data quality indicators

Data quality indicators are based on the coefficient of variation (CV). Quality indicators indicate the following: A - Excellent (CV between 0% and 4.99%); B - Very good (CV between 5% and 9.99%); C - Good (CV between 10% and 14.99%); D - Acceptable (CV between 15% and 24.99%); E - Use with caution (CV between 25% and 34.99%); F - Too unreliable to publish (CV greater than or equal to 35% or sample size is too small to produce reliable estimates).

Highlights

April 2011 (preliminary)

Average weekly earnings of non-farm payroll employees increased 0.7% from March to \$876.44 in April. Compared with April 2010, average weekly earnings were 3.5% higher.

Chart 1
Year-to-year change in average weekly hours and average weekly earnings

The 3.5% growth in average weekly earnings during the 12 months to April was attributable to a number of factors in addition to wage growth, such as changes in the composition of employment by industry, by occupation and by level of job experience.

The average number of hours worked per week, which can also contribute to growth in average weekly earnings, was unchanged from April 2010 at 32.9 hours.

Average weekly earnings increased in every province in the 12 months to April. Growth was well above the national average in Saskatchewan, Alberta and Newfoundland and Labrador. The slowest growth was in Prince Edward Island.

Note to readers

The Survey of Employment, Payrolls and Hours (SEPH) is a business census of non-farm payroll employees. Its key objective is to provide a monthly portrait of the level of earnings, the number of jobs and hours worked by detailed industry at the national, provincial and territorial level.

Statistics Canada also produces employment estimates from its monthly Labour Force Survey (LFS). The LFS is a household survey whose main objective is to divide the working-age population into three mutually exclusive groups: the employed (including the self-employed), unemployed and not in the labour force. This survey is the official source for the unemployment rate and collects data on the socio-demographic characteristics of all those in the labour market.

As a result of conceptual and methodological differences, estimates of changes from SEPH and LFS do differ from time to time. However, the trends in the data are quite similar.

Unless otherwise stated, this release presents seasonally adjusted data, which facilitates comparisons by removing the effects of seasonal variations.

Non-farm payroll employment data are for all hourly and salaried employees, as well as "other employees" category, which includes piece-rate and commission-only employees.

Average weekly hours data are for hourly and salaried employees only and exclude businesses which could not be classified to a North American Industrial Classification System code.

All earnings data include overtime pay and exclude businesses which could not be classified to a North American Industrial Classification System code.

Average weekly earnings are derived by dividing total weekly earnings by the number of employees.

Changes in average earnings can be influenced by a number of factors. Changes in the level of earnings, the number of payroll employees, and the number of hours worked can have an impact. Other factors could include compositional changes over time, such as changes in the proportions of full-time and part-time work; proportions of casual, senior and junior employees; the occupational distribution within and across industries; and in the distribution of employment between industries. Such effects may apply differently within different provinces and territories, and over time.

Chart 2
Year-over-year growth in average weekly earnings by province, April 2010 to April 2011

Growth in average weekly earnings was above the national average of 3.5% in 6 of the 10 largest industrial sectors, led by health care and social assistance and manufacturing. The slowest growth in earnings occurred in construction and retail trade.

In the 12 months to April, average weekly earnings increased by 6.9% to \$817.54 in health care and social assistance. This sector has had one of the most consistent upward trends in earnings and payroll employment since 2001, when the comparable data series began (see the "Sector profile" section of this release).

The second fastest growth in average weekly earnings in the 12 months to April occurred in manufacturing, where earnings increased by 6.3% to \$989.66. Growth in this sector was particularly notable in industries such as beverage and tobacco product manufacturing; petroleum and coal product manufacturing; fabricated metal product manufacturing; and printing and related support activities.

Chart 3
Year-to-year change in average weekly earnings in the ten largest sectors, April 2010 to April 2011

Year-over-year growth in average weekly earnings was also above the national average in some smaller industries such as information and culture (+7.5% to \$1,104.46) and arts, entertainment and recreation (+5.2% to \$583.55). Weekly earnings in information and culture have been rising since July 2010, particularly among motion picture and sound recording industries; telecommunications; and data processing, hosting and related services. In arts, entertainment and recreation, earnings have been increasing since May 2009, mainly in amusement, gambling and recreation industries.

Average weekly hours worked

Average weekly hours fell 0.3% from March to April. Compared with April 2010, the average workweek was unchanged at 32.9 hours.

Notable year-over-year increases in average weekly hours worked occurred in health care and social assistance (+3.1%), information and culture (+2.9%) as well as finance and insurance (+2.7%). At the same time, there were declines in other sectors, mainly construction (-2.2%) and transportation and warehousing (-2.2%).

In mining, quarrying and oil and gas extraction, average weekly hours fell 1.7% to 40.0 hours, but this was still the highest of all sectors.

Non-farm payroll employment by sector

In April, non-farm payroll employment increased by 29,600 from March. On a year-over-year basis, the number of non-farm employees rose by 242,800 (+1.7%).

The monthly non-farm payroll employment increase in April occurred in a number of sectors, with the largest gains in manufacturing; accommodation and food services; and health care and social assistance.

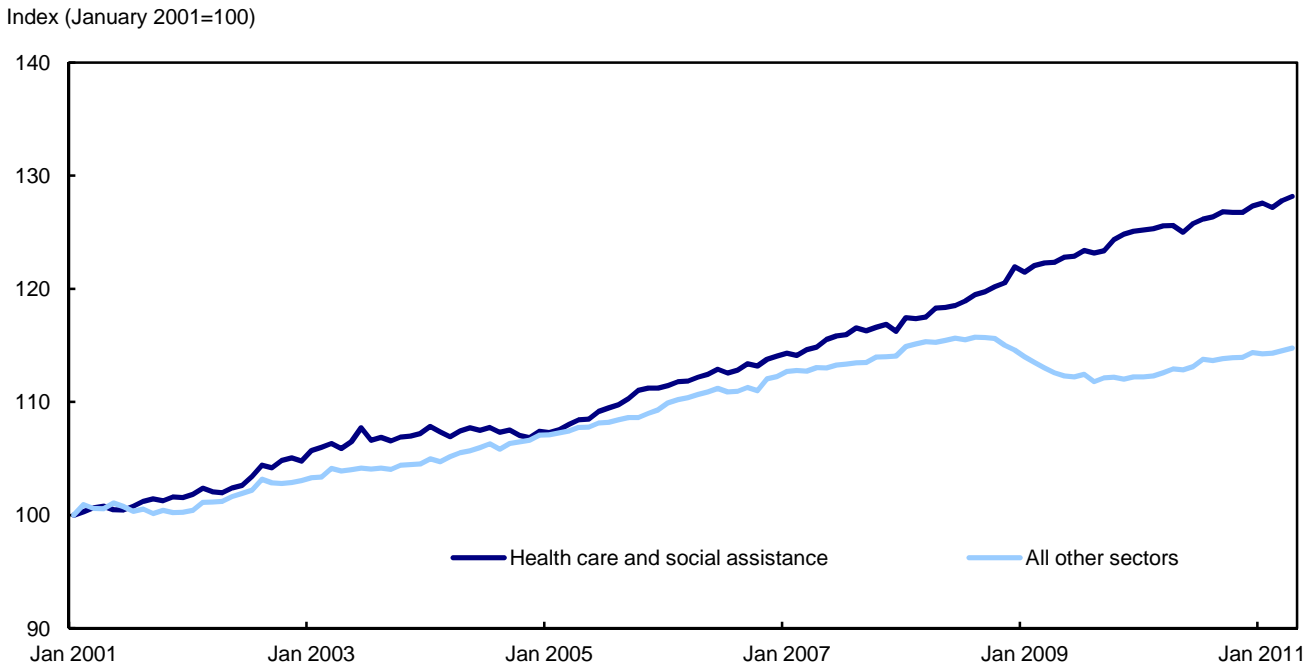

The fastest year-over-year growth (+14.9%) occurred in mining, quarrying and oil and gas extraction, where payroll employment rose by 27,200. Growth in this sector was driven by gains in support activities for mining and oil and gas extraction in Alberta.

In construction, payroll employment rose by 2.9% (+23,800), the second largest year-over-year increase. This growth was spread across most provinces and occurred mainly in heavy and civil engineering construction and specialty trade contracting.

Sector profile: Health care and social assistance

From time to time, this release profiles an industrial sector with a notable trend in earnings, hours or employment. The profile for April 2011 examines the health care and social assistance sector because of its consistent trend of faster-than-average growth in earnings and employment, a trend that has spanned many years.

Chart 4
Payroll employment in health care and social assistance, January 2001 to April 2011

More than 1.6 million employees work in health care and social assistance, making it the second largest sector after retail trade. Hospitals account for the largest share (35%) of employees in the sector, followed by ambulatory health care services (26%); this latter group includes offices of physicians, dentists and other health practitioners as well as out-patient care centres. Another 22% of the sector’s employees work in nursing and residential care facilities, while 17% work in social assistance.

In contrast to most other sectors, health care and social assistance has seen its share of total payroll employment increase steadily since 2001, when the comparable data series began. Currently, the sector accounts for 11% of total employment, up one full percentage point from 2001.

This sector is one of the few that recorded growth in payroll employment during the 2008-2009 economic downturn, as its number of employees increased by 3.1% between August 2008 and August 2009. During the same period, the number of payroll employees fell 3.4% in the remaining sectors of the economy.

For most of the past decade, health care and social assistance posted year-over-year increases in average weekly earnings. In the 12 months to April 2011, earnings in this sector increased by 6.9%, well above the national average of 3.5%.

Average weekly earnings of \$817.54 in the sector were below the national average of \$876.44. However, across the health care and social assistance industry groups, average weekly earnings ranged from \$612.97 for those working in social assistance to \$992.03 for those working in hospitals.

In the 12 months to April, average weekly earnings increased 9.1% to \$677.34 in nursing and residential care facilities and advanced 8.2% to \$835.00 in ambulatory health care services. Both gains exceeded the sector average.

Part of the 12-month growth in weekly earnings in health care and social assistance was attributable to a 3.1% increase in weekly hours, which averaged 30.3 hours in April.

Average weekly hours in this sector have been on an upward trend since October 2009. Despite the increase in April, the average number of hours worked in the sector was more than two hours below the national average of 32.9.

Note to users

Every March, as part of the regularly scheduled year-end review of the Survey of Employment, Payrolls and Hours (SEPH), seasonally adjusted estimates are revised using the latest seasonal factors. This year, all seasonally adjusted estimates going back four years (January 2006 onwards) have been revised and are available on CANSIM (Tables 281-0025, 281-0028, 281-0031, and 281-0034) and in this publication. The use of the latest seasonal factors had an impact on the date of the most recent peak of payroll employment, which is now August 2008, compared with the pre-revision peak of October 2008.

In addition, as part of the annual review, there were revisions to a small number of industries for the 2006 to 2009 period. The most significant impacts are on the employment estimates for the following industries: depository credit intermediation; securities and commodity exchanges, and other financial investment activities.

To enquire about SEPH concepts, methods or data quality, contact Client Services at 613-951-4090 or toll free number at 1-866-873-8788 (labour@statcan.gc.ca) or Luke Pelot at 613-951-1002 (luke.pelot@statcan.gc.ca) of the Labour Statistics Division.

Survey overview

The monthly Survey of Employment, Payrolls and Hours (SEPH) is designed to provide monthly estimates to measure levels and month-to-month trends of payroll employment paid hours and earnings. The data are compiled at detailed industrial levels for Canada, provinces and territories.

Methodology

Target population

The target population is composed of all employers in Canada, except those primarily involved in agriculture, fishing and trapping, private household services, religious organisations and the military personnel of the defence services. SEPH draws its samples from the Business Register (BR) maintained by the Business Register Division of Statistics Canada and from a list of all businesses registered in Canada Revenue Agency's (CRA) Business Number program with one or more active payroll deduction accounts.

The Business Register is a list of all businesses in Canada and is updated each month using data from various surveys, business profiling and administrative data. The Business number is a unique identifier assigned by CRA to business participating in one or more of the following programs: Payroll Deduction, Goods and Services Tax, Importer and Exporter Tax and Corporation Tax. The payroll deduction source includes all employers with remittances for employee income taxes, CPP/QPP and Employment Insurance contributions.

The statistics contained in this publication are based on:

- a census of administrative records for all employers' establishments that are in-scope for the survey and are present on the Business Register. The monthly payroll and employment estimates are derived from the administrative source.
- a sample survey "Business Payrolls Survey (BPS)" conducted monthly to collect data required to estimate SEPH variables not available on administrative records. The estimates derived from the administrative source are combined with the results of the BPS to produce estimates for the full range of SEPH variables.

Terms and definitions

Enterprise: An enterprise is any business or institution whether incorporated or not; it comprises sole proprietorships, partnerships, companies and other forms of organizations. An enterprise is considered to be simple if all its establishments operate in the same province/industry classification; otherwise, an enterprise is classified as complex.

Establishment: For statistical purposes it is the smallest entity capable of reporting statistics of economic production, typically a factory, a mine, a store or a similar unit.

Industry classifications: the North American Industry Classification System 2007 (NAICS) is based on the supply side or on production oriented principles. Each establishment is assigned an industry code according to the NAICS. A description of the various industries and groups of industries is contained in the "North American Industrial Classification System" manual, Catalogue no. 12-501-XPE. For analytical purposes, we have created special groupings that are not part of the NAICS classification.

Special industry groupings based on NAICS 2007

Industrial aggregate (00-91N) represents the sum of all the industries included in the survey. Since March 1994, the employment estimates for the industrial aggregate include the unclassified businesses (00).

Unclassified businesses (00) represents the businesses that have not yet been classified to a NAICS, a province or to a territory. The employment estimates for industrial aggregate include the unclassified businesses.

Goods-producing industries (11-33N) comprise forestry (11N), mining (21), utilities (22), construction (23) and manufacturing (31–33).

Service-producing industries (41-91N) consists of trade (41, 48-45), transportation and warehousing (48-49), information and cultural industries (51), finance and insurance, real estate and rental and leasing (53), professional, scientific and technical services (54), management of companies and enterprises (55), administrative and support and waste management and remediation services (56), educational services (61), health care and social assistance (62), arts, entertainment and recreation (71), accommodation and food services (72), other services (81), public administration (except for military personnel and other government services) (91).

Forestry, logging and support (11N) includes forestry and logging (113) and support activities to forestry (1153).

Durable goods manufacturing (321N) includes wood products manufacturing (321), non-metallic mineral products manufacturing (327), primary metal manufacturing (331), fabricated metal products manufacturing (332), machinery manufacturing (333), computer and electronic products manufacturing (334), electrical equipment, appliances and components manufacturing (335), transportation equipment manufacturing (336) and furniture and related products manufacturing (337) and miscellaneous manufacturing (339).

Non-durable goods manufacturing (311N) includes food manufacturing (311), beverage and tobacco products manufacturing (312), textiles mills (313), textile products mills (314), Clothing manufacturing (315), leather and applied products manufacturing (316), paper manufacturing (322), printing and related support activities (323), petroleum and coal products manufacturing (324), chemical manufacturing (325), plastics and rubber products manufacturing (326) and miscellaneous manufacturing (339).

Trade (41-45N) includes wholesale trade (41) and retail trade (44–45).

Education special aggregation (611N) includes elementary and secondary schools (6111), community college and CEGEP(s) (6112), universities (6113), business schools and computer management training (6114) and technical and trade schools (6115).

Public Administration (91) includes only the establishments engaged in activities that are governmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

Geographic classification: Reporting units are assigned to a province or territory.

Paid absence: Paid absence includes, statutory holidays, paid holidays, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

Standard workweek: The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

Variables

Employee: The employment is derived from administrative records. Since the data for the different employee categories are not reported on the administrative records, the BPS survey is conducted to estimate ratios needed to calculate those variables.

The survey determines an employee as being any person drawing pay for services rendered or for paid absences and for whom the employer must complete a Canada Revenue Agency T-4 form.

The employee concept includes full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses, the self-employed, unpaid family workers, persons working outside Canada, military personnel and casual workers for whom a T-4 is not required. It also excludes those who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmens' compensation or other related fund, etc.). However, employees paid for part of the reference period and unemployed or on strike for the rest of this period are included in the survey.

The employees are classified into the following categories:

Employees paid by the hour: any employee whose basic wage is expressed as an hourly rate.

For Elementary and Secondary schools (6111), Community colleges and CEGEP(s) (6112), Universities (6113), Business schools and Computer management training (6114) and Technical and Trade schools (6115) industries, this category of employment represents Non-teaching Staff: all employees other than teachers and academic staff i.e. president, vice president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (janitor, bus driver etc).

Salaried employees (paid a fixed salary): any employee whose basic remuneration is a fixed amount for at least one week.

For Elementary and Secondary schools (6111), Community colleges and CEGEP(s) (6112), Universities (6113), Business schools and Computer management training (6114) and Technical and Trade schools (6115) industries, this category of employment represents Teaching Staff: those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

Other employees: those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc. Although this variable is not included in this document, the data remains available.

For Elementary and Secondary schools (6111), Community colleges and CEGEP(s) (6112), Universities (6113), Business schools and Computer management training (6114) and Technical and Trade schools (6115) industries, this category of employment represents Supply or Substitute Teachers: teachers who are called in to teach whenever their services are needed either to augment the existing staff or as a short-term replacement for a full-time or part-time teacher.

Weekly Payrolls: Weekly payrolls are defined as the portion of gross monthly payrolls that reflect work performed during the reference week. It represents the gross dollar value before deductions for income taxes, employment insurance contributions etc., including regular pay, overtime and a portion of bonuses, commissions and other type of special payments. The payroll concept excludes dollar amounts that are taxable allowances and benefits, certain types of non-wage compensation as well as employer contributions to employment insurance, Canada/Quebec

pension plans, provincial medical plans, workers compensation and other welfare plans. Some annual special payments are excluded while other lump sum special payments are adjusted to coincide with the reference week period. The gross monthly payrolls are derived from Administrative records.

Average weekly earnings (including or excluding overtime) for all employees: Average weekly earnings are derived by dividing total weekly payrolls (including or excluding overtime) by the payroll employment.

Average hourly earnings (including or excluding overtime) for hourly paid employees: Average hourly earnings for hourly paid employees is obtained by dividing the total weekly payrolls (including or excluding overtime) by the total number of weekly hours (including or excluding overtime).

Average hourly earnings (including or excluding overtime) for salaried employee: Average hourly earnings is derived by dividing the total weekly payrolls (including or excluding overtime) by the number of paid hours.

Average weekly hours (including or excluding overtime) for hourly paid employees: Average weekly hours are obtained by dividing the total paid weekly hours (including or excluding overtime) by the number of hourly paid employees.

Average weekly hours for salaried employees: Average weekly hours are obtained by dividing the total paid weekly hours by the number of salaried employees.

Total hours paid for hourly paid employees (including or excluding overtime): Total paid hours are defined as all hours paid (including or excluding overtime hours) including hours of paid absence.

Total hours paid for salaried employees: Total hours paid are obtained by multiplying the average Standard work week hours (note that this variable does not include overtime) by the number of salaried employees.

SEPH Data by size of enterprises

On a quarterly and annual basis, SEPH produces Employment, Average Weekly Earnings and Hours data by employment size of enterprises for Canada, the provinces and territories. Provincial and territorial employment is thus allocated to the size of employment of the enterprise in Canada. The employment size of an enterprise is calculated as an average of the monthly employment levels reported for the period. The data is produced at the sector level of the North American Industrial classification and for the Industrial aggregate level.

The employment sizes are:

- 0 to 4 employees
- 5 to 19
- 20 to 49
- 50 to 99
- 100 to 299
- 300 to 499
- 500 and plus
- All sizes

SEPH also produces data for the following sizes:

- 0 to 49 employees
- 50 to 299
- 300 and plus

The data produced by size of enterprises will generally be more volatile than the estimates produced for the SEPH monthly production. For example, the levels published for smaller size of employment cells may be affected by the movements of enterprises from one size to another from quarter to quarter. Other events such as strike, temporary closures, changes in the enterprise structures on the Business Register will also cause volatility to the more detailed sizes series. It should be noted that while the data by employment can be a useful research tool, it should not be used in contract escalation because of the potential for higher level volatility associated with this product.

Design your own table

Design your own table to order Employment, Earnings and Hours data in the detail you need. All data collected by the survey can be custom tabulated to meet your particular data needs. A consultant will help you custom design your tabulation. Our office is open from 8:00 A.M. to 4:30 P.M.. Telephone: 613- 951-4090; Facsimile: 613-951-4087; Internet: labour@statcan.gc.ca.
