

# PERSPECTIVES

ON LABOUR AND INCOME

## Fact-sheet on gambling

---

- Net revenue from government-run lotteries, video lottery terminals (VLTs), and casinos rose from \$3.2 billion in 1993 to \$11.8 billion in 2003.<sup>1</sup> Of this \$11.8 billion, \$6.5 billion was profit.
- Net revenue from pari-mutuel betting (horse racing) dropped from \$500 million to \$420 million over the same period (1993 to 2003).
- In 2003, lotteries accounted for 25% of all net non-charity gambling revenue, casinos 33%, VLTs 23%, and slot machines not in casinos 19%.
- Average gambling expenditure per person 18 and over in 2002 ranged from \$103 in the three territories to \$620 in Alberta, with a national average of \$483.<sup>2</sup>
- Compared with workers in non-gambling industries, those in gambling were more likely to be women (52% versus 47%), under 35 (49% versus 37%), paid by the hour (81% versus 64%), and paid less (\$17 hourly versus \$18).
- Employment in the gambling industry rose from 14,000 in 1993 to 50,000 in 2003.
- One in six women and men living alone reported spending money on casinos, slot machines or VLTs; however, the men spent more than three times as much as the women—\$807 compared with \$245.<sup>3</sup>
- Gambling participation and expenditure rates increased with household income. For example, 56% of households with incomes of less than \$20,000 gambled in 2002 and spent an average of \$280, while equivalent figures for those with incomes of \$80,000 or more were 80% and \$905.
- Three-quarters of Canadians 15 and over (18.9 million) gambled in 2002. According to the Problem Severity Gambling Index, the majority of these gamblers (93.7%) did so without any problems, while the remainder exhibited at-risk (5.7%) or problem (0.6%) gambling behaviour.

**Net revenue from government-run gambling has increased steadily.**

Source: Survey of Household Spending

### Data sources and definitions

**Labour Force Survey:** a monthly household survey that collects information on labour market activity, including detailed occupational and industrial classifications, from all persons 15 years and over.

**National Accounts:** The quarterly Income and Expenditure Accounts (IEA) is one of several programs constituting the System of National Accounts. The IEA produces detailed annual and quarterly income and expenditure accounts for all sectors of the Canadian economy, namely households, businesses, governments and non-residents.

**Survey of Household Spending:** an annual survey that began in 1997 and replaced the Family Expenditure Survey and the Household Facilities and Equipment Survey. It collects data on expenditures, income, household facilities and equipment, and other characteristics of families and individuals living in private households.

The **Canadian Community Health Survey (CCHS)** provides regular and timely cross-sectional estimates of health determinants, health status, and health system utilization. The initial year (2000) and every odd year thereafter (from 2001) collects generic health information from 130,000 respondents. During the even years, the survey sample is smaller (roughly 30,000) and addresses a specialized topic. Cycle 1.2, on Mental Health and Well-Being, was held in 2002. Its main objective was to provide national and provincial estimates of major mental disorders and problems, and to illuminate the issues associated with disabilities and the need for and provision of health care. The survey contained questions on a wide range of disorders and problems, including a section on 'pathological gambling'.

The target population of the CCHS 1.2 excludes those living in the three territories, individuals living on reserves or crown land, residents of institutions, full-time members of the Armed Forces, and residents of some remote regions.

**Gambling industries:** This industry group covers establishments primarily engaged in operating gambling facilities, such as casinos, bingo halls and video gaming terminals; or providing gambling services, such as lotteries and off-track betting. It excludes horse race tracks and hotels, bars and restaurants that have casinos or gambling machines on the premises.

**Gambling profit:** net income from provincial and territorial government-run lotteries, casinos and VLTs, after prizes and winnings, operating expenses (including wages and salaries), payments to the federal government and other overhead costs are deducted.

**Gambling revenue:** all money wagered on provincial and territorial government-run lotteries, casinos and VLTs, less prizes and winnings. Gambling revenue generated by and for charities and on Indian reserves is excluded.

**Government casino:** a government-regulated commercial casino. Permits, licences and regulations for casinos, both charity and government, vary by province. Government casinos, now permitted in several provinces, also vary by the degree of public and private involvement in their operations and management. Some government casinos are run entirely as crown corporations, while others contract some operations—for example, maintenance, management or services—to the private sector.

**Video lottery terminal (VLT):** coin-operated, free-standing, electronic game of chance. Winnings are paid out through receipts that are turned in for cash, as opposed to cash payments from slot machines. Such terminals are regulated by provincial lottery corporations.

Source: Canadian Community Health Survey 1.2, 2002

\* Statistically significant difference at the .05 level. Tests were done between the at-risk proportion of the reference category and other categories within each variable (except for the provinces, which were compared with the Canada total).

\*\* Significance tests were done between the non-problem and at-risk gambling populations.

Note: For more information, see Marshall and Wynne (2004).

## Notes

1 Refers to total money wagered on non-charity lotteries, casinos and VLTs, minus prizes and winnings.

2 Survey of Household Spending (SHS) and National Accounts rankings of provincial expenditures differ, in part because the SHS includes both charity and non-charity gambling activity.

3 The expenditure figures are not adjusted for any winnings. As well, households consistently under-report the amount of money they spend on gambling. Comparisons with Lottery Corporation figures, for example, have shown that households under-report their government lottery purchases by more than 50%.
