-- Suppressed due to both small numbers and extremely high variability

Confidence intervals illustrate the degree of variability associated with the rate. See Technical Notes.

These rates are created by average of three years of data (1995, 1996, 1997) over the 1996 population estimates; age-standardized to the 1991 Canadian population age structure.

Rates for Ontario are presented for both **District Health Councils (DHC)** and **Public Health Units (PHU)**. DHCs are more relevant for health system analysis while PHUs are more relevant for health status measures.
