1. Data source: Statistics Canada, Canadian Community Health Survey, Nutrition, 2004
2. Population aged 12 to 17, reporting on the amount of time in hours per week usually spent participating in sedentary activities (watching television or videos, playing videogames and spending time on a computer playing games, e-mailing, chatting and surfing the Internet).
3. Bootstrapping techniques were used to produce the coefficient of variation (CV) and 95% confidence intervals (CIs).
4. Data with a coefficient of variation (CV) from 16.6% to 33.3% are identified by an (E) and should be interpreted with caution.
5. Data with a coefficient of variation (CV) greater than 33.3% were suppressed (F) due to extreme sampling variability.
6. CANSIM table 105-2005.
