Working Papers

The Working Papers publish research related to science and technology issues. All papers are subject to internal review. The views expressed in the articles are those of the authors and do not necessarily reflect the views of Statistics Canada.

The Science and Innovation Information Program

The purpose of this program is to develop **useful indicators of science and technology activity** in Canada based on a framework that ties them together into a coherent picture. To achieve the purpose, statistical indicators are being developed in five key entities:

- **Actors:** are persons and institutions engaged in S&T activities. Measures include distinguishing R&D performers, identifying universities that license their technologies, and determining the field of study of graduates.
- **Activities:** include the creation, transmission or use of S&T knowledge including research and development, innovation, and use of technologies.
- **Linkages:** are the means by which S&T knowledge is transferred among actors. Measures include the flow of graduates to industries, the licensing of a university's technology to a company, co-authorship of scientific papers, the source of ideas for innovation in industry.
- **Outcomes:** are the medium-term consequences of activities. An outcome of an innovation in a firm may be more highly skilled jobs. An outcome of a firm adopting a new technology may be a greater market share for that firm.
- **Impacts:** are the longer-term consequences of activities, linkages and outcomes. Wireless telephony is the result of many activities, linkages and outcomes. It has wide-ranging economic and social impacts such as increased connectedness.

The development of these indicators and their further elaboration is being done at Statistics Canada, in collaboration with other government departments and agencies, and a network of contractors.

Prior to the start of this work, the ongoing measurements of S&T activities were limited to the investment of money and human resources in research and development (R&D). For governments, there were also measures of related scientific activity (RSA) such as surveys and routine testing. These measures presented a limited picture of science and technology in Canada. More measures were needed to improve the picture.

Innovation makes firms competitive and we are continuing with our efforts to understand the characteristics of innovative and non-innovative firms, especially in the service sector that dominates the Canadian Economy. The capacity to innovate resides in people and measures are being developed of the characteristics of people in those industries that lead science and technology activity. In these same industries, measures are being made of the creation and the loss of jobs as part of understanding the impact of technological change.

The federal government is a principal player in science and technology in which it invests over five billion dollars each year. In the past, it has been possible to say only *how much* the federal government spends and *where* it spends it. Our report **Federal Scientific Activities, 1998 (Cat. No. 88-204)** first published socio-economic objectives indicators to show *what* the S&T money is spent on. As well as offering a basis for a public debate on the priorities of government spending, all of this information has been used to provide a context for performance reports of individual departments and agencies.

As of April 1999, the Program has been established as a part of Statistics Canada's Science, Innovation and Electronic Information Division.

The final version of the framework that guides the future elaboration of indicators was published in December, 1998 (**Science and Technology Activities and Impacts: A Framework for a Statistical Information System**, Cat. No. 88-522). The framework has given rise to **A Five-Year Strategic Plan for the Development of an Information System for Science and Technology** (Cat. No. 88-523).

It is now possible to report on the Canadian system on science and technology and show the role of the federal government in that system.

Our working papers and research papers are available at no cost on the Statistics Canada Internet site at <http://www.statcan.ca/english/research/scilist.htm>.

Acknowledgements

Several departments and agencies provided important inputs at various stages of the survey. They were Industry Canada, the Canadian Biotechnology Secretariat, Agriculture Canada, National Research Council, Canadian Institute for Health Research, Natural Resources Canada, Department of Foreign Affairs and International Trade, Health Canada and Environment Canada. Funding was provided by the Canadian Biotechnology Strategy.

The survey also owes a debt of gratitude to the firms, that must remain anonymous, who gave their time and ideas in development and testing of the survey and as well as those firms that responded to the survey.

At Statistics Canada numerous people contributed to the success of the survey and are owed thanks including Claire Racine-Lebel, Craig Byrd and Annie Gilbert, but especially to Antoine Rose, Special Advisor for his leadership. And finally thanks to the methodology team of Lyne Guertin, Richard Laroche, Nicolas Lavigne and Yves Morin.

Introduction

The *Biotechnology Use & Development Survey – 1999* administered by the Science, Innovation and Electronic Information Division of Statistics Canada, provides information on three groups of firms;

- 1) firms involved in developing new products and processes using biotechnologies
- 2) firms that use biotechnologies in their day to day activities
- 3) firms that do not use biotechnology

This paper focuses on the later two groups of firms.

The survey was conducted as part of a project to develop biotechnology statistics and was funded under the Canadian Biotechnology Strategy. It addressed the questions: What are the characteristics and activities of firms that use or develop biotechnology as an important part of their firms' activities? Two papers (see McNiven, 2001a & 2001b) begin to address those questions by reporting on the revenue, research and development, import and export, product pipeline, human resources characteristics and business practices of core biotechnology firms. Table 1 summarizes selected characteristics of core biotechnology firms from the 1997 (see Traoré, 2001) and 1999 surveys. Table 2 gives a sector perspective from the 1999 survey.

Table 1 Core Biotechnology Firm Characteristics 1997-2002

| Year | 1997 | 1998 | 1999 | 2002 ³ |
|---|-------|-------|--------|-------------------|
| Number of Biotechnology Firms | 282 | ... | 358 | ... |

Two sub-groups are explored in this paper, users¹ of biotechnology and non-users² of biotechnology. The users group is comprised of firms that use biotechnology in their day to day operations, and do not consider biotechnology central to their activities. If used in research and development, biotechnology is an adjunct activity not the central R&D activity³. The non-users group does not use biotechnology, but did provide information on the reasons why they do not use biotechnology. These responses may provide insight into the barriers to using biotechnology. The two sub-groups are from NAICS⁴ codes where the possibility of using biotechnology had been identified in previous surveys supplemented by expert opinion and consultation from industry, government and academia.

Background

The use of biotechnology in human activity is not new. Classical forms of biotechnologies such as fermentation have been a part of industrial processes for decades, if not centuries. But today, more recent developments in biotechnologies are diffusing throughout the economy. Industrial, health and environmental activities are being transformed and new ones are emerging. Traditional biological processes continue today but are enhanced by scientific processes intended to not only understand organisms but to decode and modify organisms and at times contributing to new products or processes.

The Canadian Biotechnology Advisory Committee⁵ (CBAC) described biotechnology “as a body of technical knowledge about living organisms or their constituent parts and applied biotechnology as those aspects of biotechnology that are used to make products and drive processes that serve social, scientific or economic purposes.” The survey, however, uses a list-based definition of biotechnology that is in fact question 1 of the questionnaire. The survey is found in Appendix 1.

This survey is the latest in a series of initiatives, including contributions to international organizations on biotechnology statistics, intended to develop a biotechnology statistics program and internationally comparable data. Statistics Canada administered two previous surveys dedicated to biotechnologies. The first, the *Biotechnology Use Survey – 1996* examined the use of biotechnologies in selected Canadian industries. Discussions of the results from this survey can be found in Rose (1998) and Arundel (1999). The second, the *Biotechnology Firm Survey-1997* was aimed at those firms actively conducting biotechnology research and development and considered to be core biotechnology firms.

¹ This group answered Questions 1, 3, 4, 5, 6, 7 & 8 (a screening question) of the questionnaire.

² This group answered Questions 1 & 2 of the questionnaire. They completed and returned the survey and should not be confused with non-respondents.

³ Possible confusion arising from core firms R&D activities and the users group conducting R&D using biotechnology can be explained this way. The users group employs biotechnology in R&D activities as one method or step to achieve a goal or end result (product or process) that is not necessarily related to biotechnology or where the end product is not a new biotechnology product or process. The core group may use biotechnology in the same way, but also with an aim to create new biotechnology based products or processes and also consider biotechnology R&D central to their activities.

⁴ *North American Industry Classification System Canada 1997* (1998). Statistics Canada, Ottawa.

⁵ Canadian Biotechnology Advisory Committee, Annual Report 1999-2000

Results from this survey can be found in McNiven (1999) and revised data and accompanying analysis in Traoré (2001).

The *Biotechnology Use and Development Survey – 1999* combines elements and the legacy of those surveys. It addresses questions such as who is using biotechnologies and why are they using biotechnologies, who develops biotechnologies and what is being developed⁶. This survey in conjunction with studies examining the supply and demand of capital, as well the growth of biotechnology firms and workshops⁷ contributes to a more comprehensive portrait of Canada's biotechnology activities. The Science Innovation and Electronic Information Division also produces other biotechnology data and a listing of these publications can be found in Appendix 3.

Use of Biotechnologies: The Users Perspective

The survey provides a statistical portrayal of biotechnology in Canada from three perspectives: core biotechnology firms, users of biotechnology and non-users of biotechnology. Data on firms that use biotechnology in their day-to-day operations, but do not develop new biotechnology products or processes, they use biotechnology as they would use any other factor of production is first discussed. Biotechnologies are simply an expedient way of conducting business. The paper then looks at the 'non-users' of biotechnologies, these firms provided information on why they did not use biotechnologies.

Firms provided information on their current use of biotechnologies, the purpose of using biotechnology, number of years using the biotechnology, and, if they were not using a particular biotechnology⁸, if they planned to use that biotechnology within 3 years. These sections discuss results for the users group and then core biotechnology firms by focusing on the four major categories; DNA based, Biochemistry/Immunochemistry, Bioprocessing based and Environment biotechnologies. These four sections are made up of 17 different biotechnologies.

An estimated 784 unique firms use biotechnologies. This group, about 8% of total firms from the selected NAICS codes combined for 1492 incidences of current use. The primary current use was in production with 824 incidences of use, followed by R&D purposes with 606 and environmental purposes with 301. Some firms reported more than one biotechnology used and reported some biotechnologies used for more than one purpose.

⁶Statistics Canada (1998) *Science & Technology Activity and Impacts: A Framework for a Statistical Information System* for an overview of the underlying conceptual framework.

⁷For a summary of the latest workshop proceedings see: *The Economic & Social Dynamics of Biotechnology* (2000). J. de la Mothe & J. Niosi (eds.) Kluwer, Boston.

⁸ See Question 1, page 2 of the questionnaire found in Appendix 1.

The 1996⁹ survey revealed a penetration rate of biotechnologies into the selected industries of about 14%, compared to the 8% in this survey. Over the next three years only 2% of firms intend to adopt the use of biotechnologies, suggesting a plateau of biotechnology adoption, given current technical levels. Many of the biotechnologies used have been in use for a decade or more, for example bioprocessing based biotechnologies have the least planned adoption and the greatest average number of years in use.

The type and intensity of biotechnologies used ranged from a high of 702 incidences of use in the biochemistry/immunochemistry category mainly for current production (66%), to 463 uses in the bioprocessing category again used mainly for current production.

The environment group totalled 182 incidences of use, not surprisingly used for environmental purposes 62% of the time. The most common use of biotechnology in the environment category was the bioremediation/biofiltration/phytoremediation category, accounting for 153 of the 182 incidents of use and used for environmental purposes by 67% of the firms. The least used was the DNA based grouping with 145 incidences of use. This group was on average in use for less than 4 years and this reflected in the fact that 77% of its use was directed towards R&D purposes.

Users & Core Group Perspective

Combining the core group and the users group creates a more complete picture of biotechnology use. There are a total of 1,142 firms using biotechnologies and together they use 3,241 biotechnologies. Collectively these 1,142 firms represent the penetration rate of biotechnology into Canadian industry.

There were a total of 423 instances of the 358 core biotechnology firms¹⁰ using DNA based biotechnologies, with research and development (R&D) emerging as the primary use, reported in 416 cases. This far outstripped their use in current production. Perhaps not surprising data is not published for DNA based biotechnologies used for environmental purposes due to low level of use. With an average use of 4 years, DNA based biotechnologies is the youngest of the different sectors. It includes bioinformatics used for an average of 3 years by the 83 firms reporting its use, almost entirely for R&D purposes. This was the lowest average time of use of any biotechnology.

Genetic engineering/DNA sequencing/synthesis/amplification sub-grouping was the most popular biotechnology with 140 firms reporting its use primarily for R&D. Growth in the use of these biotechnologies is anticipated¹¹, with 151 new users of DNA based biotechnologies expected within the next 3 years.

The eight biotechnologies found in biochemistry/immunochemistry section were the most frequently used biotechnologies with cumulative 795 occurrences, mainly for R&D

⁹Readers should use caution in direct comparisons between the various surveys since frames, methodologies and questions vary between the surveys.

¹⁰ Firms provided multiple responses to biotechnologies used.

¹¹ Note To Readers: Projections for future use of biotechnologies and other forecasts used in this and other papers were provided by respondents and are not forecasts created by Statistics Canada.

purposes (700), but also for production (243) and environmental (78) purposes. Some firms used biotechnologies for more than 1 purpose. Its average time of use had the greatest range from 4.2 years to 10.6 years. 171 firms currently used the microbiology/virology/microbial/ecology sub-group for R&D, production and environmental purposes, averaging 10.6 years in use. This was one of the longest average periods a biotechnology was used.

As group, bioprocessing based biotechnologies have been used for the longest period with an average period of 8.5 years. As well it has the highest number of firms using it in current production. This may reflect its maturity, and it may have, as a group, shifted from a research and development focus to a more standardized process. Only 35 more firms plan to introduce these technologies in the next 3 years. The final group is the environmental biotechnologies, where again the focus is on R&D, but with a significant number of firms reporting using these techniques in current production stage. Only 10 firms plan to introduce environmental biotechnologies to their operations before 2002.

Biotechnology Use and North American Industrial Classification System (NAICS)

Table 5 provides data on the use of biotechnologies by NAICS codes. Not surprisingly, given the distinct nature of biotechnology activity, biotechnology use is spread over a diverse range of NAICS codes. There are 16 different codes where biotechnologies are found, and with the exception of 3, all are at the four-digit level. In addition there is a group for firms with no assigned NAICS code at the time of the survey. Codes range through industries from aquaculture (NAICS 1125) to oil & gas extraction (NAICS 2111) to medical & diagnostics laboratories. There are a large number of suppressed cells due to high coefficient of variation (C.V.) and confidentiality issues.

The most intense use of biotechnologies is found in food processing (311), where 256 instances of bioprocessing based biotechnologies are used mainly in current production, and 203 biochemistry/immunochemistry biotechnologies are used mainly for current production and to a lesser extent for product/process R&D. In chemical manufacturing (NAICS 325) firms cited 101 bioprocessing based uses of biotechnology, mainly for product/process R&D purposes. Given the diversity of NAICS codes where biotechnologies found and the range of purposes for biotechnology, it is not surprising that biotechnology is viewed as an activity rather than a distinct industry.

Benefits From Using Biotechnologies

Firms rated the improvement of product quality as the number one benefit derived from using biotechnologies. It was the 2nd highest benefit in the 1996 survey. Interesting enough, lower cost factors were rated low as benefits from using biotechnologies. This stands in contrast to the results of the 1996 survey where lower production costs rated as the greatest positive influence in introducing biotechnologies to a firm. A benefit of increased production flexibility was rated highly by firms, as was increased sales. Table 6 contains complete data on the benefits of using biotechnologies.

Sources of Information on Biotechnology

“The activities of innovation and technology do not take place in isolation”¹².

Biotechnology is no exception and firms rely on a variety of sources to obtain information. Among the most important are the internal resources of a firm, with 29% of firms attaching a high importance to internal sources, staff or associated firm. In contrast only 4% rate data retrieval services as important. Government sources were considered of high importance by 10% of firms, behind academic journals, academic institutions, tacit knowledge and other companies. Government sources were rated by at least 35% of firms as low importance as information sources. Firms rely on numerous sources of information. Table 7 contains full data on information sources.

Human Resources/Contracting Out

The 784 biotechnology user firms employ 6,151 persons with biotechnology related responsibilities. This represents 3% of the total of 192,079 people working in firms that use biotechnology. Of those biotechnology employees, the majority is found in the production category followed by technicians/engineering and finance/marketing. Biotechnology scientific/research direction is fourth on the list with just over 200 employees. The number of dedicated biotechnology production staff dropped by almost a quarter between 1998 and 1999, but is predicted to rise to over 1,800 employees by 2002.

Firms reported few unfilled biotechnology positions so, consequently, user firms reported little difficulty in recruiting biotechnology staff. However, in order to find biotechnology staff, user firms used In-house training as the prime method in filling positions, followed by university recruitment and networking as methods used in recruiting biotech staff. The use of students is limited with only 233 students employed with biotechnology related responsibility. Technical/Trade/College students accounted for 64 positions, undergraduates another 97 spots and the final 72 were graduate level students. Data for unfilled positions is unpublished due to confidentiality and quality issues.

In addition to employees with biotechnology responsibilities, user firms contracted out \$323 million in biotechnology related contracts. There were 108 research & development contracts, worth \$218 million, leading the 4 categories. 45 Regulatory/clinical affairs contracts averaging \$1.7 million per contract followed. Details are available in tables 8-11.

‘Non Users’ of Biotechnologies and Barriers to Their Using Biotechnologies

As important as it is to develop knowledge about the characteristics of firms using or developing biotechnologies, information about firms not using biotechnology and their reasons for not using biotechnology can contribute to a greater understanding of some of the barriers to biotechnology adoption.

An estimated 8,455 firms from the selected NAICS codes **do not use** biotechnology. This represents about 92% of the firms in the NAICS codes surveyed. In comparison, using different methodology but a similar universe, the *Biotechnology Use by Canadian*

¹² Rose (1998) p11

*Industry Survey*¹³ found that about 14% of the sample used at least one biotechnology in the 1996 fiscal year. Of the 8,455 non-users, only 184 firms plan to introduce biotechnologies within three years. 100 firms cited environmental biotechnologies in future plans, representing an increase of 54% in the environment use sector. This is followed by biochemistry/immunochemistry and then DNA based biotechnologies. Collectively this represents an adoption rate of 2% in industries known to use biotechnologies.

Among firms responding to issues beyond the Not Applicable category, the main barriers to using biotechnology were attributed to cost factors by 50% of firms, followed by lack of qualified staff by 41% of firms and then public acceptance cited by 36% of firms. The cost factors were the cost to implement/integrate biotechnologies, high cost of equipment and cost of capital. The 1996 survey found that the primary impediments to using biotechnology among non-users were lack of financial justification, lack of information, biotechnologies not sufficiently developed, insufficient market for products and lack of scientific and technical information. See table 12

Summary

This is the final of 3 papers providing data and an overview of the results of the Biotechnology Use & Development Survey – 1999. Readers are encouraged to use the data.

¹³ For complete survey details and results see: Rose, A. (1998). *Biotechnology Use By Canadian Industry – 1996*. Working Paper Series, Statistics Canada, Ottawa.

Methodology

The survey was mailed to 3,377 firms in selected NAICS codes in May 2000. The sample drawn from the Business Register of Statistics Canada was supplemented by a list of firms prepared by industry experts. Biotechnology does not fit into a single NAICS code so the need to sample based on the possibility of biotechnology use is required. Selected NAICS codes, mainly in the manufacturing sector, were identified as sectors of the economy where there was the possibility of firms using biotechnologies. Firms were selected to provide a representative sample based on size, industry, and province. Overall response rate was 66%. Results from this survey were weighted to reflect the entire count of firms in the selected industry sectors.

Excluded from the sample and from the estimates are the very small biotechnology firms. These firms had less than 5 employees and less than \$100,000 in research and development expenditures. The impact on the results was minimal, for example less than 1% of biotechnology research and development expenditures and new product and processes.

The questionnaire was compiled and written with the active input of a consultation group of biotechnology experts from a variety of areas of expertise and interest. Following its initial design, the questionnaire was field tested with potential respondents, whose comments on the design and content were then incorporated into the questionnaire.

A challenge facing the survey, and indeed all research into the nature of the biotechnology sector, is the fact that biotechnology is not a single product or process nor a single group of products or processes. It is a broad spectrum of products and processes spanning human health, agriculture, environmental and other industries and classifications. The sampling techniques reflect this so that the sample reflects not a single well-defined industry but a developing sector with a multitude of characteristics, some known and some less known.

Definitions

Debate on what constitutes biotechnology continues and one of the threads of debate is the debate between old biotechnologies and new biotechnologies. Old biotechnologies include traditional fermentation and yoghurt making. The new biotechnologies build on the advances in science in the 1970's and 80's. This survey does not attempt to reconcile that debate, but did actively seek out the new biotechnologies, as opposed to the more traditional biotechnologies such as fermentation.

As part of its ongoing initiatives, the Division is actively involved with the OECD where consensus has been reached on a provisional list based definition for biotechnology. This definition, adopted after the administration of this survey, is a revision of the list of biotechnologies developed by Statistics Canada and other countries and used in Question 1. The OECD definition will be incorporated into the next survey. Several methods of defining biotechnology were attempted prior to the survey and a list-based definition

emerged as the preferred method for test respondents. The list of biotechnologies used is question 1, page 2 of the questionnaire, found in Appendix 1.

Classifications

This series of reports uses a series of classifications in data tables. These are firm size, sector and geography.

Geography is the standard geography classifications of Statistics Canada¹⁴

Size is based on the number of employees a firm reports:

- Small - 50 or fewer employees
- Medium - 51 to 150 employees
- Large - 151 or more employees

Sector consists of 8 groups including an 'other' category. These categories are human health, agriculture, natural resources, environment, aquaculture, bioinformatics, and food processing. Additional detail for each of these categories can be found on page 7, Question 9 of the questionnaire contained in Appendix 1.

Data Quality

This survey, as with all surveys using a sample, must reach a balance between time, cost and the quality of data. In cases where the quality of data is questionable based on a high coefficient of variation or for other reasons the data is either not published or indicated as being unreliable. Data users are reminded to use this data with caution. Data that could in any way be used to identify a firm was suppressed to ensure confidentiality.

Some figures used in this publication are revised figures of the originally published preliminary results. Other data is preliminary data and may be revised. Data are estimates based on weighted responses, and were subjected to an intensive follow-up, editing and imputation process. Results from the 1997 Biotechnology Firm Survey have been revised to facilitate comparisons between 1997 and 1999 data¹⁵.

Respondent Categories

The questionnaire was designed to alleviate respondent burden as much as possible. For example the first group of respondents, the non-users of biotechnology, was able to quickly exit the survey with minimal effort. The second group, biotechnology users answered a series of questions covering 3 additional pages, while core respondents completed the full survey. Respondent testing of the survey revealed that the full questionnaire could be completed in 1.5 hours. The frequency of the survey is planned for every second year.

¹⁴ For a full discussion see Census Dictionary, Geography Division, Statistics Canada

¹⁵ For additional details see: Traoré, Namatié (2001) *The Canadian Biotechnology Sector: Features From the 1997 Biotechnology Survey*. Working Paper Series, Statistics Canada, Ottawa.

The survey was designed to capture data from three distinct groups. The first group do not use biotechnology. This non-users group provided information on why they did not use biotechnologies, by responding to questions 1 and 2 in the survey. The second group is the firms that use biotechnologies as part of their day-to-day operations, as they would use any other factor of production. For this group biotechnologies are simply an expedient way of conducting business. This group responded to questions 1, 3, 4, 5, 6, 7, and 8 of the questionnaire. The final group is the core firms. These firms are conducting an active research and development program in biotechnology and consider biotechnology central to their activities. This group completed the entire survey with the exception of question 2. This group of 358 firms was the focus of the two prior papers.

Appendix I -- Copy of Questionnaire

Biotechnology Use and Development Survey - 1999

Confidential when completed

Collected under the authority of the Statistics Act, Revised Statutes of Canada, 1985, c. S-19. Completion of the questionnaire is a legal requirement under the Statistics Act.

Survey Purpose

Statistics Canada is undertaking this survey in support of the Canadian Biotechnology Strategy. The purpose is to produce information about firms engaged in biotechnology activities by addressing the following question. What are the characteristics and activities of firms that use or develop biotechnology as an important part of their firm's activity?

Biotechnology is a dynamic emerging sector of the Canadian economy and its impact has the potential to be felt through all parts of Canadian society. An accurate understanding of biotechnology requires comprehensive data. Information from this survey may be used by businesses for economic or market analysis, by trade associations to study industry performance, government departments and agencies to assist policy formation, and the academic community for research purposes. Statistics Canada will create a database combining survey responses with existing Statistics Canada data records. **An executive summary of the results will be sent to all respondents.**

Please report on Canadian biotechnology activities of your firm. Complete a separate questionnaire for each firm engaged in biotechnology activity in Canada.

Authority

Collected under the authority of the Statistics Act, Revised Statutes of Canada, Chapter S19. Completion of this questionnaire is a legal requirement under the Statistics Act.

Confidentiality

Statistics Canada is prohibited from publishing or releasing any statistics that would divulge information obtained from this survey that relates to any identifiable firm without the previous written consent of that firm. The data reported in this questionnaire will be treated in strict confidence, used for statistical purposes and released in aggregate form only. The confidentiality provisions of the Statistics Act are not affected by either the Access to Information Act or any other Legislation.

If you require assistance in the completion of the questionnaire or have any questions regarding the survey, please contact:

| 2180 | Public acceptance/perception of biotechnology | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Technology | | | | | | | |
| 2190 | Biotechnology not sufficiently developed | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 2200 | Lack of external technical expertise/support | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Other (please specify) | | | | | | | |
| 2210 | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

If you are not using any biotechnology, please stop here.
 Please return the questionnaire in the return prepaid envelope.
 Thank you for your co-operation

Information Sources on Biotechnology

3. Rate the importance of the following sources of information on biotechnology as used by your firm. Use the following scale where 1 is low importance and 5 is high importance. Indicate if not applicable to your firm.

| Sources of Information on Biotechnology | Importance | | | | | Not Applicable 0 |
|---|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| | Low 1 | 2 | 3 | 4 | High 5 | |
| 3100 Internal resources/staff or parent/subsidiary firm | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3110 Academic journals/trade publications | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3120 Universities/colleges/private training institutes | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3130 Federal government department/agency | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3140 Personal contact with others (tacit knowledge) | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3150 Other companies | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3160 Provincial government department/agency | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3170 Professional/industry associations | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3180 Library/literature search | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3190 Database retrieval services | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3200 Conferences/workshops/trade shows | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3210 Other (please specify) | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

Benefits from Using Biotechnology

4. a) Does your firm use biotechnology in its production or processing operations?

4100 No → Go to Question 5.

Yes
↓

b) Rate the benefits from using biotechnologies in your firm's production or processing operations. Use the following scale where 1 is low importance and 5 is high importance. Indicate if not applicable to your firm.

| Benefit of Using Biotechnology | Importance | | | | | Not Applicable 0 |
|--|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| | Low 1 | 2 | 3 | 4 | High 5 | |
| Productivity Improvement | | | | | | |
| 4110 Lower labour costs | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4120 Lower capital costs | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4130 Lower energy costs | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Product Improvement | | | | | | |
| 4140 Develop new products or processes | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4150 Extend product range | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4160 Improvement in product quality | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Plant Organization | | | | | | |
| 4170 Increase production flexibility | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4180 Lower maintenance expenses | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4190 Cleaner production/pollution reduction | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Market Performance | | | | | | |
| 4200 Improve market position | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4210 Increase sales | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4220 Reduced time to market/Faster delivery time | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Other (please specify) | | | | | | |
| 4230 | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

5 Human Resources

For the purposes of this survey Employees are defined as those workers for whom you completed a Revenue Canada T4-Statement of Remuneration Paid Form for the 1999 tax year. Include working owner(s). Do not include students.

5. a) How many employees does your firm currently employ? 5100

b) How many employees have biotechnology-related responsibilities? 5110

c) In the table below provide the number of biotechnology employees. Class the employee by their primary area of responsibility. For example, a person working 60% of their time on biotechnology research would be counted once as mainly working in scientific/research direction.

| Position | Number Currently Employed | | |
|--|---|---|---|
| | Working full-time on biotechnology (more than 50% of time) 1 | Working part time on biotechnology (less than 50% of time) 2 | Estimated number to be employed in biotechnology in 2002 3 |
| Biotechnology R&D Activities | | | |
| 5120 Scientific/Research Direction | | | |
| 5130 Technicians/Engineering | | | |
| 5140 Regulatory/Clinical Affairs | | | |
| Biotechnology Administration & Production | | | |
| 5150 Production | | | |
| 5160 Finance/Marketing | | | |
| 5170 Management/Licensing/Administration | | | |

d) Does your firm currently have unfilled full time biotechnology-related positions?

5180 No → Go to Question 5 e)
 Yes
↓

| Position | If Yes, was the reason due to | | | |
|--|---|-----------------------------------|---|-------------------------|
| | Number of Unfilled Full-Time Positions 1 | Lack of qualified candidates 2 | Compensation required by qualified candidates too high 3 | Other 4 |
| Biotechnology R&D Activities | | | | |
| 5190 Scientific/Research Direction | | <input type="radio"/> 1 | <input type="radio"/> 2 | <input type="radio"/> 3 |
| 5200 Technicians/Engineering | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 5210 Regulatory/Clinical Affairs | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Biotechnology Administration & Production | | | | |
| 5220 Production | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 5230 Finance/Marketing | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 5240 Management/Licensing/Administration | | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

e) Does your firm employ (either paid or unpaid) post-secondary students in biotechnology-related activities? Include co-op placements, part-time, and full-time positions.

5250 No → Go to Question 5 f)

Yes → What level of education? → 1 Technical/Trade/College
 2 Undergraduate level
 3 Graduate level

f) Does your firm contract out any of the following biotechnology-related activities?

| Biotechnology Activity | No 0 | Yes | If yes, what is the value (in \$000) of contracts in 1999? If more than one what is the total value? 1 |
|--|-----------------------|-------------------------|---|
| 5260 Research & Development | <input type="radio"/> | <input type="radio"/> → | \$ _____,000 |
| 5270 Regulatory/Clinical Affairs | <input type="radio"/> | <input type="radio"/> → | \$ _____,000 |
| 5280 Marketing/Distribution | <input type="radio"/> | <input type="radio"/> → | \$ _____,000 |
| 5290 Management/Licensing/Administration | <input type="radio"/> | <input type="radio"/> → | \$ _____,000 |

6 Recruiting Practices

6. Check any of the following methods used to fill biotechnology-related positions.

- 6000
- | | |
|---|--|
| 1 <input type="radio"/> Internet resources | 7 <input type="radio"/> Use over-qualified staff |
| 2 <input type="radio"/> University recruitment | 8 <input type="radio"/> Networking |
| 3 <input type="radio"/> Use under-qualified staff | 9 <input type="radio"/> Newspaper/journal ads |
| 4 <input type="radio"/> Temporary/contract staff | 10 <input type="radio"/> Professional associations |
| 5 <input type="radio"/> Employment agencies | 11 <input type="radio"/> Other (<i>please specify</i>) |
| 6 <input type="radio"/> In-house training | _____ |
| | _____ |

7. a) Did you attempt to hire biotechnology staff from outside Canada in 1999?

6100 No → Go to Question 7 c)

Yes → From where? → 1 USA 4 Latin America
 2 Europe 5 Other
 3 Asia

b) Were you successful in hiring biotechnology staff from outside Canada?

6120 No

Yes → How many biotechnology staff did you hire from outside Canada in 1999? 1

c) Did biotechnology personnel leave your firm in 1999?

6130 No

Yes → How many? 1

7 Product/Process Development

8. a) Is your firm currently **developing product** that **requires** the use of biotechnologies?

7000 Yes

No

8. b) Is your firm currently **developing** processes that **requires** the use of biotechnologies?

7110 Yes

No

c) Does your firm consider biotechnology central to its activities?

7120 Yes

No

Did you answer "Yes" to any part of Question 8?

7130 Yes → Go to Question 9

No → Please stop here. Return the questionnaire in the prepaid return envelope. Thank you for your cooperation.

8 Biotechnology Products

9. Please provide the **number** of biotechnology products or processes your firm has at each stage of development.

| Biotechnology Sector | Number of biotechnology products/processes by development stage | | | |
|---|---|--|--|--|
| | Research & Development 0 | Pre-clinical trials/ Confined field trials 1 | Regulatory phase/ Unconfined release assessment 2 | Approved/ On market/In production 3 |
| Human Health | | | | |
| 8110 Diagnostics (e.g. biosensors, immunodiagnostics, gene probes) | | | | |
| 8120 Therapeutics (e.g. vaccines, immune stimulants, biopharmaceuticals, rational drug design, drug delivery, combinatorial chemistry) | | | | |
| Agriculture Biotechnology | | | | |
| 8130 Plant Biotechnology (e.g. tissue culture, embryo-genesis, genetic markers, genetic engineering) | | | | |
| 8140 Animal Biotechnology (e.g. diagnostics, therapeutics, embryo transplantation, genetic markers, genetic engineering) | | | | |
| 8150 Non-food Agriculture (e.g. fuels, lubricants, commodity and fine chemical feedstocks, cosmetics) | | | | |
| Natural Resources | | | | |
| 8160 Energy (e.g. microbiologically enhanced petroleum recovery, industrial bioprocessing, biodesulphurization) | | | | |
| 8170 Mining (e.g. microbiologically enhanced mineral recovery, industrial bioprocessing, biodesulphurization) | | | | |
| 8180 Forest Products (e.g. biopulping, biobleaching, biopesticides, tree biotechnology, industrial bioprocessing) | | | | |
| Environment | | | | |
| 8190 Air (e.g. bioremediation, diagnostics, phytoremediation, biofiltration) | | | | |
| 8200 Water (e.g. biofiltration, diagnostics, bioremediation, phytoremediation) | | | | |
| 8210 Soil (e.g. biofiltration, diagnostics, bioremediation, phytoremediation) | | | | |

Biotechnology Products

| Biotechnology Sector | Number of biotechnology products/processes by development stage | | | |
|--|---|--|---|---|
| | Research & Development 0 | Pre-clinical trials/ Confined field trials 1 | Regulatory phase/ Unconfined release assessment 2 | Approved/ On market/In production 3 |
| Aquaculture | | | | |
| 8220 Fish health, broodstock genetics, bioextraction | | | | |
| Bioinformatics | | | | |
| 8230 Genomics & molecular modelling (e.g. DNA/RNA/protein synthesising & databases for humans, plants, animals, and micro-organisms) | | | | |
| 8240 Gene therapy (e.g. gene identification, gene constructs, gene delivery) | | | | |
| Food Processing | | | | |
| 8250 Bioprocessing (e.g. using enzymes and bacteria culture) | | | | |
| 8260 Functional Foods/Nutraceuticals (e.g. probiotics, unsaturated fatty acids) | | | | |
| Other (please specify) | | | | |
| 8270 | | | | |
| 8280 | | | | |

9 Cooperative/Collaborative Arrangements

10. Was your firm involved in biotechnology-related **cooperative/collaborative arrangements** with other companies or organizations in 1999?

Cooperative and collaborative arrangements involve the active participation in projects by your company and other companies or organizations in order to develop and/or continue work on new or significantly improved biotechnology processes, products and/or services. Pure contracting-out is not regarded as collaboration.

9100 No → Go to question 13

Yes → How many? → 1

11. Please indicate for which purposes. Check any that are applicable.

Arrangement Purpose

- 9110 To conduct research & development (R&D)/ Access to specialized inputs
- 9120 Regulatory affairs
- 9130 To access knowledge/skills/critical expertise
- 9140 Prototype development/production/manufacturing
- 9150 Access markets/distribution channels
- 9160 Access to capital
- 9170 Intellectual Property Protection
- 9180 Other (please specify)

12. Check collaboration/co-operation arrangements by each type and their geographic location.

| Partner Category | Canada 0 | USA 1 | Europe 2 | Latin America 3 | Asia 4 |
|---|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| 9190 A firm of smaller or equal size | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 9200 A larger firm | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 9210 Government department/agency | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 9220 University/Hospital/Research network | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 9230 Other (please specify) | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

13. Would you describe your firm as a 'spin-off'?

A Spin-off is defined as a new firm created to transfer and commercialize inventions and technology developed in universities, firms or laboratories.

9240 No → Go to Question 14

Yes → Was your firm a spin-off from; →

- ¹ University/hospital
- ² Another company
- ³ Government agency/lab
- ⁴ Other (please specify) _____

10 Obstacles to Biotechnology Commercialization

14. Rate the following **obstacles to advancement of biotechnology commercialization** activities in your firm. Use the following scale where 1 is low importance and 5 is high importance. Indicate if not applicable to your firm.

| | Low 1 | Importance | | | | High 5 | Not Applicable 0 |
|--|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|------------------------|
| | → | | | | | | |
| Inputs | | | | | | | |
| 10100 Access to capital | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10110 Access to technology/information | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10120 Access to human resources | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Markets | | | | | | | |
| 10130 Domestic market too small | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10140 Lack of access to international markets | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10150 Transportation regulations on biotechnology | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10160 Lack of distribution & marketing channels | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| Constraints | | | | | | | |
| 10170 Public perception/acceptance | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10180 Regulatory requirements | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10190 Time/cost | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10200 Patent rights held by others | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10210 Lack of patent protection for plants | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10220 Lack of patent protection for animals | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10230 Lack of patent protection for human components (e.g., organs, tissues) | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10240 Other (please specify) | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

11 Patents

15. a) How many patents and/or pending patents does your firm currently have in each region. (Indicate '0' if none).

| | | Geographic Location | | | | | |
|-------|------------------|---------------------|-------------|----------|-------------|--------------------|-----------|
| | | None 5 | Canada 0 | USA 1 | Europe 2 | Latin America 3 | Asia 4 |
| 11100 | Existing patents | | | | | | |
| 11110 | Pending patents | | | | | | |

b) Please indicate the number of **patent applications** your company submitted to the following Patent Offices. (Indicate '0' if none)

| 11120 | Patent Office/Year | 1998 0 | 1999 1 |
|-------|---|-----------|-----------|
| 11130 | Canadian Intellectual Property Office (CIPO) | | |
| 11140 | United States Patent & Trademark Office (USPTO) | | |
| 11150 | European Patent Office (EPO) | | |
| 11160 | Other (please specify) | | |

c) Please indicate the number of applications for **plant breeders' rights** your company submitted. (Indicate '0' if none)

| | Patent Office/Year | 1998 0 | 1999 1 |
|-------|--|-----------|-----------|
| 11170 | Canadian Plant Breeders' Rights Office | | |
| 11180 | Plant Variety Protection Office, USDA | | |
| 11190 | Community Plant Variety Office, EU | | |
| 11120 | Other (please specify) | | |

12 Intellectual Property

16. During the last two years, 1998-1999 did your firm **grant the right to use intellectual property** to another firm or did your firm **acquire the right to use intellectual property** from another firm?

12100 No → Go to Question 17

Yes → Please indicate the type and direction of such intellectual property transfer.

| Intellectual Property | Granted Rights to Canadian Firms 0 | | Granted Rights to Foreign Firms 1 | | Acquired Rights from Canadian Firms 2 | | Acquired Rights from Foreign Firms 3 | |
|--|---------------------------------------|-----------------------|--------------------------------------|-----------------------|--|-----------------------|---|-----------------------|
| | Yes | No | Yes | No | Yes | No | Yes | No |
| 12110 Trade Secrets/Licensing Agreements | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 12120 Patents | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 12130 Plant breeders' rights | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

13 Revenues, Expenditures & Trade

17. Please provide financial details in the following table. Please report for fiscal years and in thousands of dollars (\$,000's). Indicate "0" if none

| | Please provide details in \$,000's for the years | | What is your forecast for 2002 |
|--|--|-----------|--------------------------------|
| | 1998 0 | 1999 1 | 2002 2 |
| 13100 Total Firm Sales/Revenue | \$,000 | \$,000 | \$,000 |
| 13110 % of Total Sales/Revenue From Biotechnology | % | % | % |
| 13120 Total R&D Spending | \$,000 | \$,000 | \$,000 |
| 13130 % of R&D Spending on Biotechnology R&D | % | % | % |
| 13140 Total Exports (including licensing agreements) | \$,000 | \$,000 | \$,000 |
| 13150 % of Exports from Biotechnology | % | % | % |
| 13160 Total Imports | \$,000 | \$,000 | \$,000 |
| 13170 % of Imports from Biotechnology | % | % | % |

18. If your firm **exported** biotechnologies, what percentage (%) of biotechnology **exports** went to the following geographic locations in 1999? Include licensing agreements. What is your forecasted distribution for 2002?

| Year | Geographic Location | | | | |
|-------------------------|---------------------|----------|-------------|--------------------|-----------|
| | Canada 0 | USA 1 | Europe 2 | Latin America 3 | Asia 4 |
| 13180 1999 | | | | | |
| 13190 Forecast for 2002 | | | | | |

19. If your firm **imported** biotechnologies, what percentage (%) of biotechnology **imports** came from the following geographic locations in 1999? Include licensing agreements. What is your forecasted distribution for 2002?

| Year | Geographic Location | | | | |
|-------------------------|---------------------|----------|-------------|--------------------|-----------|
| | Canada 0 | USA 1 | Europe 2 | Latin America 3 | Asia 4 |
| 13200 1999 | | | | | |
| 13210 Forecast for 2002 | | | | | |

20. a) Did your firm attempt to raise capital for biotechnology in fiscal year 1999?

- 13220 No → Go to Question 20 c)
 Yes
↓

b) Were you successful in raising capital?

- 13230 No → Go to Question 20 c)
 Yes → How much did you raise? → \$,000
(in thousands)

Indicate the sources of capital and the percentage (%) of total capital that source provided in 1999.

| Source | % of Total Capital |
|--|--------------------|
| 13240 Angel investors/family/friends | |
| 13250 Government loans/grants/incentives | |
| 13260 Venture Capital funds | |
| 13270 Conventional sources (i.e. banks) | |
| 13280 Initial Public Offering (IPO) | |
| 13290 Collaborative alliance | |
| 13300 Other (please specify) | |
| TOTAL | 100% |

20. c) Does your firm plan to raise capital in 2002?

13310 No → Go to Question 21

- Yes → How much do you plan to raise in 2002? →
- 1 Less than \$500,000
 - 2 \$500,000 to \$5,000,000
 - 3 More than \$5,000,000

21. In the past 5 years did your firm apply for the tax benefit for biotechnology related activities under the R&D (SRED) tax program?

- 13320 No → Why? →
- 1 Complexity of application process
 - 2 Uncertainty of eligibility
 - 3 Did not meet eligibility requirements
 - 4 Other (please specify) _____
- Yes

22. Does your firm use the Internet?

13330 No → Go to Question 23

Yes → Indicate for what purposes your firm uses the Internet.
(Check any that are applicable.)

- 1 Sharing research & development
- 2 Marketing/selling
- 3 Purchasing goods and services
- 4 Accessing databases/information sources
- 5 E-commerce
- 6 Human resource search
- 7 Public relations
- 8 General communication
- 9 Other (please specify) _____

23. Which of the following strategies did your firm use in 1999?
(Check any that are applicable)

- 13400
- 1 Refocused product development
 - 2 Downsized
 - 3 Increased size
 - 4 Entered product trials
 - 5 Launched new product
 - 6 Acquired a company
 - 7 Out-source production
 - 8 Licensed in technology
 - 9 Licensed out technology
 - 10 Merged with other company
 - 11 Formed a joint venture
 - 12 Expanded into foreign markets
 - 13 No change
 - 14 Other (please specify)

If you have any comments regarding this survey, please provide them in the space below.

Thank you for your co-operation
Please return the questionnaire in the return prepaid envelope.

Appendix II -- Biotechnology Bibliography

Service Bulletin on Science Statistics

88-001-XPB, Volume 20 (1996)

No. 12 Biotechnology Research and Development (R&D) in Canadian Industry
1989 and 1993

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0129688-001-XIB.pdf>

88-001-XPB, Volume 21 (1997)

No. 11 Biotechnology Research and Development (R&D) in Canadian Industry,
1995

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0119788-001-XIB.pdf>

88-001-XIB, Volume 22 (1998)

No. 4 Biotechnology Scientific Activities in Selected Federal Government
Departments and Agencies, 1997-98

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0040088-001-XIB.pdf>

88-001-XIB, Volume 24 (2000)

No. 2 Biotechnology Research & Development in Canadian Industry, 1997

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0020088-001-XIB.pdf>

88-001-XIB, Volume 25 (2001)

No. 3 Biotechnology Scientific Activities in Selected Federal Government
Departments and Agencies, 1999-2000

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0030188-001-XIB.pdf>

88-001-XIB, Volume 25 (2001)

No. 4 Biotechnology Research and Development (R&D) in Canadian Industry, 1998

<http://www.statcan.ca/stcpubs/english/88-001-XIB/0040188-001-XIB.pdf>

Working Paper ST-98-05 *Biotechnology Use by Canadian Industry, 1996*, Antoine Rose.
March 1998

<http://www.statcan.ca/english/research/88F0006XIB/88F0006XIB98005.pdf>

Working Paper ST-01-07 *Biotechnology Use and Development, 1999*, Chuck McNiven.
March 2001

<http://www.statcan.ca/english/research/88F0006XIB/88F0006XIB01007.pdf>

Working Paper ST-01-11 *Practices and Activities of Canadian Biotechnology Firms:
Results from the Biotechnology Use and Development Survey - 1999*, Chuck McNiven.
August 2001

<http://www.statcan.ca/english/research/88F0006XIB/88F0006XIB01011.pdf>

Working Paper ST-01-12 *Canadian Biotechnology Industrial Activities: Features from
the 1997 Biotechnology Survey*, Namatié Traoré. August 2001

<http://www.statcan.ca/english/research/88F0006XIB/88F0006XIB01012.pdf>

Research Paper No. 6 *Diffusion of Biotechnologies in Canada*, Anthony Arundel.
February 1999

<http://www.statcan.ca/english/research/88F0017MIE/88F0017MIE99006.pdf>

Research Paper No. 8 *Explaining Rapid Growth in Canadian Biotechnology Firms, 1999*, Jorge Niosi, February 2000.

<http://www.statcan.ca/english/research/88F0017MIE/88F0017MIE00008.pdf>

Research Paper No. 9 *Internationally Comparable Indicators on Biotechnology: A Stocktaking, a Proposal for Work and Supporting Material*, W. Pattinson, B. Van Beuzekom and A. Wyckoff, January 2001

<http://www.statcan.ca/english/research/88F0017MIE/88F0017MIE01009.pdf>

Arundel, Anthony and Rose, Antoine, "Finding the Substance Behind the Smoke: Who is Using Biotechnology?", *Nature Biotechnology*, Volume 16, July 1998, pp. 596-597.

Arundel, Anthony and Rose, Antoine, "The diffusion of environmental biotechnology in Canada: adoption strategies and cost offsets", *Technovation*, Volume 19, No. 9, September 1999, pp. 551-560.

How to Order Catalogued Publications

These and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to:

Statistics Canada
Dissemination Division
Circulation Management
120 Parkdale Avenue
Ottawa, Ontario
K1A 0T6

Telephone: 1(613)951-7277
National toll free order line: 1-800-700-1033
Fax number: 1-(613)951-1584 or 1-800-889-9734
Toronto Credit Card only (416)973-8018
Internet: order@statcan.ca

CATALOGUED PUBLICATIONS

Statistical Publication

- 88-202-XPB Industrial Research and Development, 2001 Intentions (with 2000 preliminary estimates and 1999 actual expenditures)
- 88-204-XIB Federal Scientific Activities, 2000-2001^e (annual)
- 88-001-XIB Science Statistics (monthly)

Volume 24

- No. 1 Federal Government Personnel Engaged in Scientific and Technological (S&T) Activities, 1990-1991 to 1999-2000^e
- No. 2 Biotechnology Research and Development (R&D) in Canadian Industry, 1997
- No. 3 Industrial Research and Development, 1996 to 2000
- No. 4 The Provincial Research Organizations, 1998
- No. 5 Federal Government Expenditures on Scientific Activities, 2000-2001^e
- No. 6 Total Spending on Research and Development in Canada, 1989 to 2000^e, and Provinces, 1989 to 1998
- No. 7 Estimation of Research and Development Expenditures in the Higher Education Sector, 1998-99
- No. 8 Research and Development (R&D) Expenditures of Private Non-Profit (PNP) Organizations, 1999

Volume 25

- No. 1 Distribution of Federal Expenditures on Science and Technology, by Province and Territories, 1998-99
- No. 2 Estimates of Total Spending on Research and Development in the Health Field in Canada, 1988 to 2000^c
- No. 3 Biotechnology Scientific Activities in Selected Federal Government Departments and Agencies, 1999-2000
- No. 4 Biotechnology Research and Development (R&D) in Canadian Industry, 1998
- No. 5 Research and Development (R&D) Personnel in Canada, 1990 to 1999^e
- No. 6 Industrial Research and Development, 1997 to 2001
- No. 7 Estimation of Research and Development Expenditures in the Higher Education Sector, 1999-2000
- No. 8 Total Spending on Research and Development in Canada, 1990 to 2001^e, and provinces, 1990 to 1999
- No. 9 Federal Government Expenditures on Scientific Activities, 2001-2002^e
- No. 10 Research and Development (R&D) Expenditures of Private Non-Profit (PNP) Organizations, 2000
- No. 11 Scientific and Technological (S&T) Activities of Provincial Governments, 1992-93 to 2000-2001^e
- No. 12 Distribution of Federal Expenditures on Science and Technology, by Province and Territories, 1999-2000

Volume 26

- No. 1 The Provincial Research Organizations, 1999

WORKING PAPERS - 1998

These working papers are available from the Science and Innovation Surveys Section of Statistics Canada, please contact:

Tel: (613) 951-6309

- ST-98-01 A Compendium of Science and Technology Statistics, February 1998
- ST-98-02 Exports and Related Employment in Canadian Industries, February 1998
- ST-98-03 Job Creation, Job Destruction and Job Reallocation in the Canadian Economy, February 1998
- ST-98-04 A Dynamic Analysis of the Flows of Canadian Science and Technology Graduates into the Labour Market, February 1998
- ST-98-05 Biotechnology Use by Canadian Industry – 1996, March 1998
- ST-98-06 An Overview of Statistical Indicators of Regional Innovation in Canada: A Provincial Comparison, March 1998
- ST-98-07 Federal Government Payments to Industry 1992-93, 1994-95 and 1995-96, September 1998
- ST-98-08 Bibliometric Analysis of Scientific and Technological Research: A User's Guide to the Methodology, September 1998
- ST-98-09 Federal Government Expenditures and Personnel on Activities in the Natural and Social Sciences, 1989-90 to 1998-99^c, September 1998
- ST-98-10 Knowledge Flows in Canada as Measured by Bibliometrics, October 1998
- ST-98-11 Estimates of Canadian Research and Development Expenditures (GERD), Canada, 1987 to 1998^c, and by Province 1987 to 1996, October 1998
- ST-98-12 Estimation of Research and Development Expenditures in the Higher Education Sector, 1996-97, November 1998

WORKING PAPERS - 1999

- ST-99-01 Survey of Intellectual Property Commercialization in the Higher Education Sector, 1998, February 1999
- ST-99-02 Provincial Distribution of Federal Expenditures and Personnel on Science and Technology, 1988-89 to 1996-97, June 1999
- ST-99-03 An Analysis of Science and Technology Workers: Deployment in the Canadian Economy, June 1999
- ST-99-04 Estimates of Gross Expenditures on Research and Development in the Health Field in Canada, 1970 to 1998^c, July 1999
- ST-99-05 Technology Adoption in Canadian Manufacturing, 1998, August 1999
- ST-99-06 A Reality Check to Defining E-Commerce, 1999, August 1999

- ST-99-07 Scientific and Technological Activities of Provincial Governments, 1990-1991 to 1998-1999^c, August 1999
- ST-99-08 Estimates of Canadian Research and Development Expenditures (GERD), Canada, 1988 to 1999^c, and by Province, 1988 to 1997, November 1999
- ST-99-09 Estimation of Research and Development Expenditures in the Higher Education Sector, 1997-98
- ST-99-10 Measuring the Attractiveness of R&D Tax Incentives: Canada and Major Industrial Countries, December 1999

WORKING PAPERS - 2000

- ST-00-01 Survey of Intellectual Property Commercialization in the Higher Education Sector, 1999
April 2000
- ST-00-02 Federal Government Expenditures and Personnel in the Natural and Social Sciences, 1990-91 to 1999-2000^c, July 2000
- ST-00-03 A Framework for Enhanced Estimations of Higher Education and Health R&D Expenditures, by Mireille Brochu, July 2000
- ST-00-04 Information and Communications Technologies and Electronic Commerce in Canadian Industry, 1999, November 2000

WORKING PAPERS - 2001

- ST-01-01 Estimates of Canadian Research and Development Expenditures (GERD), Canada, 1989 to 2000^c, and by Province 1989 to 1998, January 2001
- ST-01-02 Estimation of Research and Development Expenditures in the Higher Education Sector, 1998-99, January 2001
- ST-01-03 Innovation, Advanced Technologies and Practices in the Construction and Related Industries: Provincial Estimates, 1999, January 2001
- ST-01-04 Innovation, Advanced Technologies and Practices in the Construction and Related Industries: National Estimates, 1999, February 2001
- ST-01-05 Provincial Distribution of Federal Expenditures and Personnel on Science and Technology 1990-91 to 1998-99, February 2001
- ST-01-06 Estimates of Total Expenditures on Research and Development in the Health Field in Canada, 1988 to 2000^c, March 2001
- ST-01-07 Biotechnology Use and Development, 1999, March 2001

- ST-01-08 Federal Government Expenditures and Personnel in the Natural and Social Sciences, 1991-92 to 2000-2001^c, April 2001
- ST-01-09 Estimates of Research and Development Personnel in Canada, 1979 to 1999^c, June 2001
- ST-01-10 Innovation in Canadian Manufacturing: National Estimates, 1999, June 2001
- ST-01-11 Practices and Activities of Canadian Biotechnology Firms: Results from the Biotechnology Use & Development Survey -- 1999, August 2001
- ST-01-12 Canadian Biotechnology Industrial Activities: Features from the 1997 Biotechnology Survey, September 2001
- ST-01-13 Innovation in Canadian Manufacturing: Provincial Estimates, 1999, September 2001
- ST-01-14 Estimates of Canadian Research and Development Expenditures (GERD), Canada, 1990 to 2001^c, and by Province, 1990 to 1999, November 2001
- ST-01-15 Estimation of Research and Development Expenditures in the Higher Education Sector, 1999-2000, December 2001

WORKING PAPERS - 2002

- ST-02-01 Innovation and Change in the Public Sector: A Seeming Oxymoron, January 2002
- ST-02-02 Measuring the Networked Economy

RESEARCH PAPERS – 1996-2001

- No. 1 The State of Science and Technology Indicators in the OECD Countries, by Benoit Godin, August 1996
- No. 2 Knowledge as a Capacity for Action, by Nico Stehr, June 1996
- No. 3 Linking Outcomes for Workers to Changes in Workplace Practices: An Experimental Canadian Workplace and Employee Survey, by Garnett Picot and Ted Wannell, June 1996
- No. 4 Are the Costs and Benefits of Health Research Measurable?, by M.B. Wilk, February 1997
- No. 5 Technology and Economic Growth: A Survey, by Petr Hanel and Jorge Niosi, April 1998
- No. 6 Diffusion of Biotechnologies in Canada, by Anthony Arundel, February 1999

- No. 7 Barriers to Innovation in Services Industries in Canada, by Pierre Mohnen and Julio Rosa, November 1999
- No. 8 Explaining Rapid Growth in Canadian Biotechnology Firms, by Jorge Niosi, August 2000
- No. 9 Internationally Comparable Indicators on Biotechnology: A Stocktaking, a Proposal for Work and Supporting Material, by W. Pattinson, B. Van Beuzekom and A. Wyckoff, January 2001
- No. 10 Analysis of the Survey on Innovation, Advanced Technologies and Practices in the Construction and Related Industries, 1999, by George Seaden, Michael Guolla, Jérôme Doutriaux and John Nash, January 2001
- No. 11 Capacity to Innovate, Innovation and Impact: The Canadian Engineering Services Industry, by Daood Hamdani, March 2001
- No. 12 Patterns of Advanced Manufacturing Technology (AMT) Use in Canadian Manufacturing: 1998 AMT Survey Results, by Anthony Arundel and Viki Sonntag, November 2001
