Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Preface

This Interim List provides a summary of the changes to census subdivisions (e.g., municipal boundary changes) in effect between January 2, 2009 and January 1, 2010. This report represents the changes which have been processed by the Geography Division based on the information received and, therefore, does not include all the changes which may have occurred in this time period.

We would welcome any suggestions on the presentation of the Interim List or the planned frequency. Those users requiring more information about changes to census subdivisions should contact us by e-mail at infostats@statcan.gc.ca, or by phone at 1-800-263-1136.

Content considerations

Notification of the changes that take place during this period are obtained from the provincial gazette and statutes, the orders of the Municipal Board, and special provincial acts.

Boundary changes are compiled from legal descriptions and accompanying sketch maps onto a digital compilation base map which is maintained by the Geography Division, using the best available information. Copies of these maps are sent for verification to the municipal authority in each province/territory on an annual basis. Any corrections or additional changes reported back to the Geography Division are represented in the subsequent issue of the Interim List as change types 8, 8C, 9 or 9C (boundary revisions).

Geographic changes

To calculate population adjustments to census subdivisions (CSDs)¹ affected by a boundary change, the change can be categorized at the dissemination block² level into two types:

- annexation of a complete dissemination block
- annexation of a partial (split) dissemination block (complete dissemination blocks and partial dissemination blocks can be annexed within the same boundary change).

In the case of complete dissemination blocks, the population count adjustments are made using published data counts.

In the case of partial dissemination blocks, adjusted population counts are derived using 2006 Census collection instruments (visitation records³ and collection maps) for the dissemination block part being annexed. The population for the part dissemination block not

1. Census subdivision (CSD): This is a term applying to municipalities (as determined by provincial legislation) or their equivalents (e.g., Indian reserves, Indian settlements). In Newfoundland and Labrador, Nova Scotia and British Columbia, census subdivisions have been created by Statistics Canada, in cooperation with the provinces, as equivalents for municipalities.

2. A dissemination block (DB) is an area bounded on all sides by roads and/or boundaries of standard geographic areas.

3. A visitation record is a registry of dwellings enumerated and records the dissemination block in which they are located. It includes a count of the occupants in the dwelling.

being annexed is the residual – published dissemination block population count minus the derived population count for the annexed part dissemination block.

Prior to the 1996 Census, the land area data contained in the Interim List was calculated manually using a digital planimeter for each CSD boundary change. This process was automated for the 2001 Census. As a result of this change, land area is no longer being calculated or published in the Interim List for individual changes, including those changes at the census subdivision level.

The following two text tables show census subdivision types by province and territory and the number of CSD changes by type of change. The summary data reflect the transactions in effect between January 2, 2009 and January 1, 2010.

**Table A Census subdivision types by province and territory,
as of January 1, 2010**

Census subdivision type		N.L.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Nvt.	Total

1. Change code:

- 1 incorporation
- 2 change of census subdivision name
- 2C correction of census subdivision name
- 23 change of census subdivision name and type
- 3 change of census subdivision type
- 3C correction of census subdivision type
- 4 dissolution
- 5 census subdivision has annexed a new part from another census subdivision
- 5A census subdivision has annexed a complete census subdivision (could also include the annexation of another census subdivision part)
- 6 census subdivision has lost a part annexed by another census subdivision
- 7 revision of Standard Geographical Classification (SGC) code
- 7C correction of Standard Geographical Classification (SGC) code
- 8 census subdivision limits have been corrected and census subdivision has gained land area and population
- 8C census subdivision limits have been corrected and census subdivision has gained land area
- 9 census subdivision limits have been corrected and census subdivision has lost land area and population
- 9C census subdivision limits have been corrected and census subdivision has lost land area
- 10 population has been increased
- 11 population has been reduced

Descriptions of Tables 1 and 2

The Interim List contains two tables, which are available for download in three file formats:

- **CSV** (Comma Separated Values) which allows you to access each table in any spreadsheet application
- **XLS** (Microsoft Excel Spreadsheet) that can be viewed with Microsoft Excel
- **TXT** (tab-delimited ASCII files).

Table 1: Changes to census subdivisions in alphabetical order by province and territory (with 8C and 9C).

This bilingual table presents all types of changes received to date, with 2006 population reported according to January 1, 2010 census subdivision limits. The changes are listed in alphabetical order by province/territory and the data are available for download for all of Canada as well as by province/territory.

Click [Table 1](#) to get to the download page for Table 1.

Table 2: Changes to census subdivision codes, names, and types in numerical order, by province and territory.

This bilingual table presents only changes that impact on the Standard Geographical Classification (SGC)⁴ and therefore excludes annexations and boundary revisions. The changes are listed in SGC code order and the data are available for download for all of Canada as well as by province/territory.

Click [Table 2](#) to get to the download page for Table 2.

An important reference for users of the Interim List is the *Standard Geographical Classification* manual. It is composed of:

Volume I (The Classification) – Catalogue number 12-571-XWE

Volume II (Reference Maps) – Catalogue number 12-572-XWE.

4. The Standard Geographical Classification (SGC) is Statistics Canada's official classification of geographic areas in Canada. The SGC provides unique numeric identification for three types of geographic areas: provinces/territories, census divisions and census subdivisions. The three geographic areas are hierarchically related. This relationship is reflected in the seven-digit code.
